14. To conserve and enhance landscape character and townscapes.	0	0	+	+	0	0	0	-	<p>Likely Significant Effects</p> <p>The policies seek to maintain and encourage the reuse and reinvestment of existing sites or premises for economic uses, securing and diversifying the role they play in the economy and Borough. As a result it is considered that the policies will have a neutral to positive effect for this objective. The policies work in general to protect the need to develop extensive tracts of land which might have some landscape value or contribute positively to the setting on a settlement, thus safeguarding these areas and ensuring their condition is maintained. Development is largely directed to built-up areas which are often less sensitive, and on established employment sites which are already integrated into the wider skyline and settlement pattern. The renewal and reuse of existing property or PDL for economic development could have a positive effect for townscape as uses are maintained preventing sites and premises from falling vacant and into decline. Town Centre policies which broaden the uses permitted within this area help to encourage investment in these areas and aid the regeneration of the Borough. An adverse effect is assessed for Policy AL02 noting the likely harm caused to the local landscape by the development of the West Craven Business Park extension. The effects are limited to a localised area of the borough and is not of a significant enough magnitude to warrant an overall adverse effect for this SA objective for this section of the Local Plan.</p> <p>Term</p> <p>Likely permanent neutral to positive effect, effective from adoption but more significant in the longer term.</p> <p>Mitigation</p> <p>Implementation of Design policies.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>Market conditions change. There is a change in national policy in regard to the use of land. Funding sources change. The needs of businesses change and they outgrow or need alternative sites to function efficiently. Pressure to develop Greenfield sites increases. Medium risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P001 Land off South Valley Drive, Colne				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has a capacity for 60 dwellings, with potential to provide for a mix of sizes, types and tenures to meet a wide range of housing need, helping to diversify and improve the quality of housing stock available within the Borough. As a result the proposal is considered to have a minor positive effect for this objective. The site is located within a ward of Pendle which suffers from high rates of deprivation.</p> <p><u>Term</u></p> <p>Permanent positive effect from the short-medium term.</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing.</p> <p><u>Assumptions</u></p> <p>That a broad mix of housing can be provided on site.</p> <p><u>Uncertainties</u></p> <p>The site is located within a weaker housing market with lower values. The delivery of affordable housing may not be possible on the site due to this reason.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<p><u>Likely Significant Effects</u></p> <p>The proposal does not involve employment land and so scores neutrally for the effects on employment land.</p> <p>The Site is located within 2000m of a major employment site (Colne Town Centre) as such is assessed to score positively for its accessibility to services.</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to score a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>People living on site work locally and/or spend their wages locally.</p> <p><u>Uncertainties</u></p> <p>None.</p>

				None
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0	<u>Likely Significant Effects</u> The Site is located within 400m of public transport provision. It is also accessible to a good range of local services. The development is not considered likely to result in an adverse effect on the highway network due to its scale, and distance from known bottlenecks in the highway network. The development would not support investment in, or result in the loss of transport infrastructure and services. The site is located at the edge of Colne and is accessible to a good range of services by foot, bicycle or public transport. The development of the site could help to encourage travel by non-car modes however topographical changes could work to counter this. Accounting for the above, on balance, the site is considered to score a minor positive effect for this objective.
				<u>Term</u> Potential permanent minor positive effects. <u>Mitigation</u> Planning contributions may to taken towards infrastructure needs where justified. Investment in cycle storage and pedestrian and cycle links. <u>Assumptions</u> Scope and viability to promote and invest in sustainable transport modes. <u>Uncertainties</u> Use of sustainable modes of travel in accessing the site is open to individual preference. (Medium)
6. To encourage the efficient use of land and conserve and enhance soils.	-			<u>Likely Significant Effects</u> The Site is greenfield and as a result would not assist in the achievement of this objective. The site is not known to include Best and Most Versitle (BMV) Land. As a result the site has a minor negative effect on this objective. <u>Term</u> Permanent minor adverse effects. <u>Mitigation</u> Adoption of higher densities to reduce land are limited due to location of the site in a prominent view. <u>Assumptions</u> None. <u>Uncertainties</u> None.

Appendix 5: Assessment of Potential Housing Sites

		<p><u>Term</u> Likely permanent neutral effects.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. EV charge points at each property.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> The proportion of residents likely to travel by foot, bicycle and public transport is unknown (medium risk)</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0	<p><u>Likely Significant Effects</u> The site has a suitability score of 3.91. The site therefore has a neutral effect for this objective. The suitability score assesses access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> The proposals have a likely neutral effect. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p> <p><u>Uncertainties</u> The scale and location of the site means that the site is not suitable for commercial extraction (High probability)</p>

Appendix 5: Assessment of Potential Housing Sites

P001 Land off South Valley Drive, Colne		
SA Objective	Score	Commentary
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0 - 0	<p><u>Likely Significant Effects</u></p> <p>The Site is not located within 500m of any national/international ecological site nor within 100m of any locally designated site. Site covered by an area of ecological interest (LERN record) The Site is comprised primarily of improved grassland. The Site is not located within a Green Infrastructure corridor.</p> <p>There is potential within the site to provide biodiversity net gain measures. The implementation of these measures is likely to reduce developable area. Overall the proposal has a minor adverse effect.</p> <p><u>Term</u></p> <p>Minor adverse effects during the build process with effects likely to reduce over the longer term.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Effect of Biodiversity net gain measures on viability. Success of measures in providing new suitable and valuable habitats for wildlife.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The site is not located is close proximity to any heritage assets. The proposal is unlikely to adversely affect any heritage asset or designation. The site scores neutrally for this objective.</p> <p><u>Term</u></p> <p>Permanent neutral effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Industrial Foothills and Valleys Landscape Character Area (zone 6a). The Sites shares limited features to the prevailing landscape within this zone, rising steeply from the existing urban area. The urban fringe location means that the site is highly influenced by and connected to the urban area. The Site is on raised ground and would be seen from a large distance away. This view however would be seen in the context of the existing settlement located immediately adjacent such as the Knotts Lane development located next to the site. The development of the Site would disrupt and alter views from existing PROW to the west and south. A minor adverse effect is assessed for this objective.</p>

Appendix 5: Assessment of Potential Housing Sites

P001 Land off South Valley Drive, Colne		
SA Objective	Score	Commentary
		<p><u>Term</u> Initial adverse effects experienced during the build phase reducing in the longer term as the development establishes and matures.</p> <p><u>Mitigation</u> High standard of design and materials use. Landscaping open space. Establishing a sense of place could result in the development enhancing the settlement edge in this location if implemented.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal scores positively for housing, employment and health and wellbeing objectives owing to the benefits brought by new housing in providing increased choice and access to housing benefiting health measures and helping to tackle levels of deprivation. New homes will support existing business and services in Colne through additional expenditure. The proposal is accessible by foot to some services and facilities as well as public transport, helping to reduce the need to travel by car for some journeys. Not all services are accessible by foot however and so some car usage will be necessary. The edge of settlement location of the site and its location in an elevated position means that negative effects are assessed for its effect on the landscape and efficient use of land. The site is also safeguarded for minerals and as a result the site has a negative effect for this objective. The proposal was formerly as landfill and as such there is potential for contamination during its development. The loss of habitats, though potentially offset through biodiversity net gain measures also has a negative effect.</p>

the sustainable use of natural resources.				Permanent Neutral effect <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The Site is not located within 500m of any national/international ecological site nor within 100m of any locally designated site. It is uncertain whether the site contained protected species. The Site is comprised primarily of improved grassland. The Site is adjacent to a Green Infrastructure corridor. BNG measures if implemented successfully and designed to complement this network could link to and expand this corridor. There is potential within the site to provide biodiversity net gain measures. The implementation of these measures is likely to reduce developable area. Overall the proposal is likely to have a neutral effect for this objective. <u>Term</u> Initial adverse effects during the build process with effects likely to reduce over the longer term. Overall a neutral effect is assessed. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping. The Site has the potential to connect to and enhance the local green infrastructure network running to the east. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development. <u>Assumptions</u> None. <u>Uncertainties</u> Effect of Biodiversity net gain measures on viability. Success of measures in providing new suitable and valuable habitats for wildlife.
	0			
13. To conserve and enhance the historic environment, heritage assets and their setting.	--			<u>Likely Significant Effects</u> The Site is wholly within the Lidgett and Bents Conservation Area, and closely related to Standroyd a Grade II Listed building. A further 3 listed buildings/structures exist within close vicinity to the Site which also may be affected by the Site's development. The development of the Site for 100 dwellings is likely to less than substantial to substantial harm which is unlikely to be mitigated. The proposal would need to be assessed for its public benefits which are unlikely to be sufficient to overcome the arising harm for the historic environment. This conclusion takes into account the findings of the appeal at the adjacent Windermere Avenue which is adjacent to the conservation area. The location of the site at the heart of the conservation area and on land which is on rising-steep land magnifies these effects. A significant adverse effect is assessed for this objective. <u>Term</u> Likely permanent significant adverse effects.

Appendix 5: Assessment of Potential Housing Sites

14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Rolling Upland Farmland Character Area (Zone 14b) however shares limited physical similarities to the prevailing open upland form found in this area representing a relatively small area of contained land (though acknowledged to be of local value). The development of the Site would significantly urbanise the area destroying the small cluster stone base village feel of Bents Lane to the east which is key to local character. The site is visible in wider vistas and its development would adversely affect the setting of Colne. The Site is wholly within the Lidgett and Bents Conservation Area, and closely related to Standroyd a Grade II Listed building. A further 3 listed buildings/structures exist within close vicinity to the Site which also may be affected by the Site's development. A TPO surrounds the site to the north, west, and south. The development of the Site for 100 dwellings is likely to result in substantial harm historical environment causing significant and demonstrable harm which is unlikely to be mitigated. The proposal would need to be assessed for its public benefits which are unlikely to be sufficient to overcome the arising harm for the historic environment. This conclusion takes into account the findings of the appeal at the adjacent Windermere Avenue which is adjacent to the conservation area. The location of the site at the heart of the conservation area and on land which is on rising-steep land magnifies these effects. Some landscape benefits could arise by extending the Green Infrastructure network into the Site through open space and landscaping provision however this would not overcome the harm identified caused to the conservation area and listed building. Overall significant adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Likely significant adverse effects potentially reducing over time following completion of the development.</p> <p><u>Mitigation</u></p> <p>Loss of trees to be avoided. New public open space and landscaping to complement and extend into the wider Green Infrastructure network. Mitigation measures are unlikely available to address issues identified on built character, setting and the historic environment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively for housing, employment and health and wellbeing objectives owing to the benefits brought by new housing in providing increased choice and access to housing benefiting health measures and helping to tackle levels of deprivation. New homes will support existing business and services in Colne through additional expenditure. The proposal is accessible by foot to some services and facilities as well as public transport, helping to reduce the need to travel by car for some journeys. Not all services are accessible by foot however and so some car usage will be necessary. The edge of settlement location of the site and its location in an elevated position means that negative effects are assessed for its</p>		

Appendix 5: Assessment of Potential Housing Sites

P002 Lidgett Triangle, Colne				
SA Objective	Score			Commentary
effect on the landscape and efficient use of land. The site is also safeguarded for minerals and as a result the site has a negative effect for this objective. The loss of habitats, though potentially offset through biodiversity net gain measures also has a negative effect. Significant adverse effects are identified for the effect on heritage and landscape objectives owing to the site's elevated and highly prominent location at the edge of Colne and its location and role within the Lidgett and Bents Conservation Area. A minor positive effect is assessed for climate change objectives owing to the site's accessibility to nearby services.				

P003 Barnfield, Blacko Bar Road, Roughlee				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 23 dwellings with potential for the delivery of new housing to a broad range of sizes, types and tenures to meet a wide range of housing need, helping to diversify and improve the quality of housing stock available within the Borough particularly that available within the rural area. As a result the proposal is considered to have a minor positive effect for this policy objective. The proposal is located within a desirable part of Pendle with higher land values. As such the development of affordable housing at the site is likely to be viable.</p> <p><u>Term</u></p> <p>Permanent positive effects from the medium-long term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>Affordable housing can be provided on site taking into account any site specific costs.</p> <p><u>Uncertainties</u></p> <p>Homes are affordable to local people (medium risk).</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	0	0	<p><u>Likely Significant Effects</u></p> <p>The proposal does not involve employment land and so scores neutrally for the effects on employment land.</p> <p>The Site is located beyond 2000m of a major employment site (Riverside Business Park) as such is assessed to score neutrally for its accessibility to services.</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term although the benefits will be limited given the limited size of the proposal. Accounting for the above, the site is considered to score a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Permanent neutral positive effects.</p> <p><u>Mitigation</u></p>

			<p>Adoption of measures to promote access and travel by sustainable transport modes.</p> <p>Assumptions None</p> <p>Uncertainties None.</p>	
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0		<p>Likely Significant Effects The site has a suitability score of 3.52. The site therefore has a neutral effect for this objective. The suitability score assesses access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p>Term Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p>Mitigation Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p>Assumptions None.</p> <p>Uncertainties Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>	
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0		<p>Likely Significant Effects The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p>Term Permanent Neutral effect</p> <p>Mitigation None.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>	
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	0	<p>Likely Significant Effects The Site designated a Site of Local Nature Importance and lies within the buffer zone for the Greenfield BHS. A woodland is located in close proximity to the Site.</p> <p>It is uncertain whether the site contained protected species. The Site is comprised primarily of improved grassland.</p> <p>The Site is adjacent to a Green Infrastructure corridor and as such its development is unlikely to harm this corridor.</p>

Appendix 5: Assessment of Potential Housing Sites

P003 Barnfield, Blacko Bar Road, Roughlee		
SA Objective	Score	Commentary
	-	<p>There is potential within the site to provide biodiversity net gain measures in particular adjacent to Pendle Water. The implementation of these measures is likely to reduce developable area. Overall, taking into account the above, the proposal is likely to have a minor adverse effect for this objective.</p> <p><u>Term</u> Minor adverse effects reducing in the medium to long term with mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping. BNG measures have the potential to complement and enhance the condition and value of the watercourse for wildlife. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Effect of biodiversity net gain measures on developable area. Success of measures in providing new suitable and valuable habitats for wildlife.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u> The site is not considered to adversely affect any heritage asset or designation. The site scores neutrally for this objective.</p> <p><u>Term</u> Permanent neutral effects.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u> The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The limited scale of the site, and its close proximity to an existing caravan park means that the Site shows limited physical similarities to the prevailing LCA. The Site would represent a major development in the AONB. The NPPF advises that great weight should be given to conserving and enhancing landscape and scenic beauty in the AONB, with a presumption against major development other than in exceptional circumstances and where it can be demonstrated to be in the public interest. No public interest case has been put forward or is considered to exist in this case. Furthermore the development would close the existing gap between Crow Trees and Roughlee which are currently separate. Developing the Site would represent major change to the built character of the local area, providing ribbon development along Blacko Bar Road, and would adversely affect both landscape and settlement character. Two TPO trees exist within the Site reducing the developable area.</p>

Appendix 5: Assessment of Potential Housing Sites

P003 Barnfield, Blacko Bar Road, Roughlee		
SA Objective	Score	Commentary
		<p><u>Term</u> Significant adverse effects likely to remain permanent.</p> <p><u>Mitigation</u> A much reduced scale of development. High standard of design and materials use. Landscaping open space. TPO trees to remain.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal scores positively for housing, employment and health and wellbeing objectives owing to the benefits brought by new housing in providing increased choice and access to housing benefiting health measures and helping to tackle levels of deprivation. New homes will support existing business and services in the rural area and provide opportunity for local people to remain in the local area. The proposal is in a relatively inaccessible location to services requiring people to travel by car. The loss of habitats, though potentially offset through biodiversity net gain measures also has a negative effect. Significant adverse effects are identified for flood risk objectives with the site being affected by flooding issues and located adjacent to Pendle Water. The proposal also is assessed to have a significant adverse effect on landscape objectives owing to the site's location within the Forest of Bowland Area of outstanding natural beauty and the scale and type of development proposed which would be inconsistent with the built and natural character of the area degrading the landscape and townscape quality. Significant harm would likely arise as a result of the development which cannot be mitigated unless the proposal was substantially reduced in scale. Neutral effects are assessed for climate change objectives.</p>

		<p>Permanent neutral effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site is located on a broad slope to the south of Kelbrook and shares very little physical character to the prevailing features of the wider character area which occupy smaller and more distinct bumps in the landscape. The Site is located at the southern edge of Kelbrook and its development would represent an extension of the built settlement into the open countryside, representing a marginal closing of the gap towards Foulridge. The land to the east of Colne Road (A56) is elevated with the existing settlement visible. Existing building visible from Colne Road have no particular architectural merit. Whilst the site has some exposure to the open countryside and inward views of the settlement, the site does provide some potential, if developed sensitively and designed to high quality to provide for an enhanced gateway to the settlement from the site. Potential harm existing heritage assets will need to be managed and mitigated against. A minor adverse effect is assessed.</p> <p><u>Term</u></p> <p>Likely minor adverse effects in the short to medium term whilst the development is constructed and before landscaping matures. Improving towards a neutral (but still adverse) affect in the longer term.</p> <p><u>Mitigation</u></p> <p>High standard design, layout and massing. Landscaping and open space. Opportunity available to enhance the setting and appearance of the settlement when entering from the south.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Quality of development and responsiveness to site context if brought forward. Medium risk.</p>
<p>Summary: The proposal scores positively for housing, employment and health and wellbeing objectives owing to the benefits brought by new housing in providing increased choice and access to. New homes will support existing business and services in the rural area and provide opportunity for local people to remain in the local area. The proposal benefits from some access to services and facilities locally as well as public transport, providing residents with a realistic alternative to the car as a means to travel. A proportion of residents will continue to travel by car. The loss of habitats, including those used by protected species, though potentially offset through biodiversity net gain measures also has a negative effect. Minor adverse effects are identified for landscape objectives owing to the site's edge of settlement and elevated location taking into account the opportunity to enhance the setting on Kelbrook in this location. Adverse effects are assessed for flood risk given surface water flooding identified at the lower end of the site. Potential for this to be avoided and incorporated into the layout of the development. A neutral effect is assessed for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P005 Land between Skipton Old Road and Castle Road, Colne				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 200 dwellings with potential for the delivery of new housing to a broad range of sizes, types and tenures to meet a wide range of housing need, helping to diversify and improve the quality of housing stock available within Colne. As a result the proposal is considered to have a significant positive effect for this policy objective. The proposal is located within a more desirable part of Colne with higher land values. As such the development of affordable housing at the site is likely to be viable.</p> <p><u>Term</u></p> <p>Permanent significant positive effects from the medium-long term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>Affordable housing can be provided on site taking into account any site specific costs.</p> <p><u>Uncertainties</u></p> <p>Homes are affordable to local people (medium risk)</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<p><u>Likely Significant Effects</u></p> <p>The proposal does not involve employment land and so scores neutrally for the effects on employment land.</p> <p>The Site is located within 2000m of a major employment site (Colne Town Centre) as such is assessed to score positively for its accessibility to services.</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short-medium term. Accounting for the above, the site is considered to score a minor positive effect for this objective.</p>
	+			<p><u>Term</u></p> <p>Permanent minor positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>People living on site work locally and/or spend their wages locally.</p> <p><u>Uncertainties</u></p> <p>Use of sustainable modes of transport to access employment. Medium risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P005 Land between Skipton Old Road and Castle Road, Colne				
SA Objective	Score			Commentary
				<u>Assumptions</u> None <u>Uncertainties</u> The proportion of residents likely to travel by foot, bicycle and public transport is unknown (medium risk)
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0			<u>Likely Significant Effects</u> The site has a suitability score of 3.96. The site therefore has a neutral effect for this objective. The suitability score assesses access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations. <u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage. <u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes. <u>Assumptions</u> None. <u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-			<u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective. <u>Term</u> Permanent loss where developed. A permanent minor adverse effect. <u>Mitigation</u> To be determined in consultation with Lancashire County Council. <u>Assumptions</u> None. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	-	--	<u>Likely Significant Effects</u> The Site is not located within 500m of any national/international ecological site nor within 100m of any locally designated site. The Site is known to fulfil a role for protected species including ground nesting birds. The Site is comprised primarily of improved grassland with some scattered scrub. The Site a locally important source of green infrastructure and its development will result in its permanent loss.

Appendix 5: Assessment of Potential Housing Sites

P005 Land between Skipton Old Road and Castle Road, Colne		
SA Objective	Score	Commentary
	-	<p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area. Overall, taking into account the above, the proposal is likely to have a minor adverse effect for this objective.</p> <p><u>Term</u> Minor adverse effects from the short to medium term and most significant at construction and after occupation. Reducing in the longer term with the adoption of mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on to the site in line with policy, particularly where this will benefit existing wildlife. Open space and landscaping. The Site has the potential to connect to and enhance the local green infrastructure network running to the east which is within the same landownership. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Success and management of open space and biodiversity measures. Low-medium risk.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	--	<p><u>Likely Significant Effects</u> A previous planning application to develop the Site was dismissed at appeal owing to the assessed level of harm caused to the nearby conservation area which was not outweighed by the public benefits. This assessment is carried forward to this appraisal noting the absence of evidence available which would lead to a different conclusion. Significant adverse effects are assessed for this objective.</p> <p><u>Term</u> Significant adverse effects potentially reducing over time depending on the quality and layout of the development.</p> <p><u>Mitigation</u> Developing land distant to the Conservation Area and Listed Buildings close to the high school may reduce this effect. This area is better related to the existing built form and reduced visual connection owing to topographical changes may serve to further limit this effect.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> The degree of harm caused and public benefits associated with the development will not be known until the planning application stage (Low risk)</p>

Appendix 5: Assessment of Potential Housing Sites

P005 Land between Skipton Old Road and Castle Road, Colne		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Rolling Upland Farmland Landscape Character Area (Zone 14b). The Site in part displays some of features which reflect the prevailing landscape character within this zone, including broad open areas, dry stone walls, and moorland grasses. Within the west however the prevailing character is semi urban being located on the urban fringe and influenced by modern development. The Site is comprised on greenfield land situated on the east of Colne. The land raises to a high point to the east of the site and likely to be visible from surrounding areas. The development would link the Lidgett and Bents Conservation Area to Colne and result in significant urban change resulting in the loss of “the rough” which forms part of the green infrastructure of Colne. The loss of this site to development would represent a significant adverse effect for this objective.</p> <p><u>Term</u></p> <p>Significant adverse effects likely to remain permanent.</p> <p><u>Mitigation</u></p> <p>A much reduced scale of development confined to the north and western part of the Site. High standard of design and materials use. Landscaping open space could reduce the level of harm identified.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. The proposal benefits from some access to services and facilities locally as well as public transport, providing residents with a realistic alternative to the car as a means to travel. A proportion of residents will continue to travel by car however the proposal is likely to have some limited harm to the wider highway network noting the character and limitations of the wider rural highway network. Health scores are neutral with the benefits of new homes offset by the wider loss of recreational space valued by the wider community. The proposal also has negative effects on objectives for the effective use of land and resources due to the site’s greenfield character and location within land identified by Lancashire County Council as safeguarded land. The loss of habitats, including those used by protected species, though potentially offset through biodiversity net gain measures also has a negative effect. Significant adverse effects are identified for heritage and landscape objectives owing to the site’s edge of settlement and elevated location and close proximity to the Lidgett and Bents Conservation Area. There is potential to reduce these effects by developing only part of the site to the north, therefore avoiding interactions with the conservation area. Adverse effects are still however likely to occur and the degree of these effects will be dependent on the detailed design.</p>

SA Objective	Score			Commentary
				Low viability means that additional measures of sustainable design and construction, including the generation of renewable energy are unlikely to be feasible.
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0			<p><u>Likely Significant Effects</u></p> <p>The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Neutral effect over the plan period.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<p><u>Likely Significant Effects</u></p> <p>The Site is not located within 500m of any national/international ecological site nor within 100m of any locally designated site. It is uncertain whether the site contained protected species. The Site does not contain any priority habitats the Site is an urban site. Development of the site would not affect the Green Infrastructure Network but is adjacent to existing greenspace and could enhance access to this.</p>
	0			<p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area and would affect site viability. Overall, taking into account the above, the proposal is likely to have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Neutral effects with potential for minor positive effects with implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping. The Site has the potential to connect to and enhance the local green infrastructure network running to the east. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development. Development will need to avoid being in close proximity to the local ecological asset located adjacent to the site to the west with sufficient off-set and biodiversity enhancement measures put in place to reduce any potential adverse effects.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Success and management of open space and biodiversity measures. Low-medium risk. Effect of BNG on viability of development – High Risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P011 Land at Former Richard Street Nurseries, Brierfield		
SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is not affected by heritage assets and as a result will have a neutral effect on the plan period.</p> <p><u>Term</u></p> <p>Permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is vacant and overgrown and located within the settlement boundary. The Site is within the Industrial Age Urban Character Area. Streets and buildings nearby reflect the street pattern and form of development typical of this character area, however suffer from the lack of investment and urban decay. The redevelopment of this site could enhance the quality of the existing built environment.</p> <p><u>Term</u></p> <p>Permanent positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Quality of development and responsiveness to site context if brought forward. Medium risk.</p>
<p>Summary: This urban site scores positively for measures of townscape quality, securing the reuse of land, climate change, supporting regeneration, landscape/townscape and public transport objectives. The proposal also scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. Limitations in viability means that the proposals effects for these objectives are more limited than otherwise could be. The proposal is affected by flood risk and drainage issues and as such is assessed as having a negative effect on these objectives. The previously developed nature of the site and its proximity to an existing watercourse give rise to the possibility of adverse effects for pollution objectives. The limited viability of the site means that any issue identified in relation to this issue may mean that the site cannot come forward. Similarly BNG requirements may also render the site unviable. The proposal scores neutrally for other objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P014 Land South of Wood Clough Platts, Brierfield			
SA Objective	Score		Commentary
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	-	<p>0</p> <p><u>Likely Significant Effects</u></p> <p>The Site is located within 100m of a locally designated ecological site.</p> <p>Site is adjacent to a BHS; an ecological interest. The Site is comprised primarily of improved grassland with some scattered scrub.</p> <p>The Site is adjacent to a Green Infrastructure corridor. Its development is unlikely to harm this corridor noting the difference in levels between the site and canal corridor.</p> <p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area and would affect site viability. Overall, taking into account the above, the proposal is likely to have a minor adverse effect for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effects reducing with implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping. The Site has the potential to connect to and enhance the local green infrastructure network running to the south and west. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development. Development will need to avoid being in close proximity to the local ecological asset located adjacent to the site to the west with sufficient off-set and biodiversity enhancement measures put in place to reduce any potential adverse effects.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Success and management of open space and biodiversity measures. Low-medium risk. Effect of BNG on viability of development – Medium Risk.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located adjacent to the Leeds and Liverpool Canal which is historically significant to the industrial heritage of the Borough. The Leeds and Liverpool Canal corridor has transitional character as it traverses the Borough, routing through urban and rural environments. The character of the canal near to the site is semi-rural, influenced by modern suburbia, the open countryside, and regenerated warehousing/mills. The development is unlikely to significantly alter this environment noting the presence of existing modern suburban development to the north. Any harm caused could be minimized subject to the design, orientation, layout and quality of housing proposed. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effect likely in the short term. This will have the tendency to reduce over time as the development settles into the wider landscape. It would reduce more quickly with adoption of high quality and sensitive design measures.</p> <p><u>Mitigation</u></p> <p>High quality housing. Development which respects the character and industrial landscape of the canal, providing for a positive relationship.</p>

Appendix 5: Assessment of Potential Housing Sites

P014 Land South of Wood Clough Platts, Brierfield		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site features some of the qualities of this landscape including enclosed field pattern and proximity to existing woodland, however is highly influenced by its settlement edge location. The Site is comprised on greenfield land situated to the south west of Brierfield. The development would extend the built form of Brierfield into the countryside but is unlikely to have a significant negative effect on landscape character owing to the limited scale of the extension, absence of designated assets, and somewhat contained nature of the wider area by Pendle Water, the M65 and the Leeds Liverpool Canal. A minor adverse effect is assessed.</p> <p><u>Term</u></p> <p>Minor adverse effects reducing towards neutral with mitigation measures and as the development matures.</p> <p><u>Mitigation</u></p> <p>Scale, siting, layout and design of development, together with open space/landscaping may soften the effects of the development on these assets.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. The proposal benefits from some access to services and facilities locally as well as public transport, providing residents with a realistic alternative to the car as a means to travel. A proportion of residents will continue to travel by car however. The proposals also scores positively for Health objectives owing to the benefits associated with the provision of new housing. Regeneration objectives have a minor positive effect due to the opportunity provided for residents for new homes and support provided as a result of the development. The proposal also has negative effects on objectives for the effective use of land and use of resources due to the site's greenfield character and location within a safeguarded area. The loss of habitats, though potentially offset through biodiversity net gain measures also has a negative effect. Adverse effects are also identified for landscape objectives owing to the site's edge of settlement location and visibility from wider public routes. Flood risk and the proximity of the site to water infrastructure (the Leeds and Liverpool Canal) also give rise to adverse effects for water related objectives. The proposal has limited suitability owing to the issues identified and as a result has a negative score for its effects on climate change. The proposal scores neutrally for other objectives.</p>

SA Objective	Score		Commentary
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	-	0 <u>Likely Significant Effects</u> The Site is located within 400m of one or more transport services which has a relatively good frequency. The Site is accessible to some services. The Site does not benefit from a suitable access, or which can be readily mitigated and as such has an adverse effect for this objective. The development would not support investment in, or result in the loss of transport infrastructure and services. The site is somewhat accessible to Brierfield town centre. The availability of services locally reduces the need to travel by car. Taking this into account, and noting the above, the proposal is assessed to have a neutral effect on this objective. <u>Term</u> Permanent neutral effects with implementation of mitigation measures. <u>Mitigation</u> The option for a suitable access looks unlikely unless P014 is developed first. <u>Assumptions</u> None. <u>Uncertainties</u> Opportunity to provide sufficient infrastructure improvements to enable safe and sufficient access. Scope in viability to support mitigation measures and contributions where needed is limited. (Medium risk)
	0		
6. To encourage the efficient use of land and conserve and enhance soils.	-/+		<u>Likely Significant Effects</u> The Site is mostly greenfield though contains brownfield features from its previous use. The Site is not known to include Best and Most Versatile Land (BMV) and as a result is considered to have a mixed effect on this objective. <u>Term</u> Permanent mixed effects <u>Mitigation</u> Adoption of higher densities to reduce land take if appropriate. <u>Assumptions</u> None. <u>Uncertainties</u> None.
7. To conserve and enhance water quality and resources	--	0	<u>Likely Significant Effects</u> The Site is located within 10m of a body of water. The development is unlikely to require any upgrade to water management infrastructure.

Appendix 5: Assessment of Potential Housing Sites

P015 Former Brierfield Wastewater Treatment Works		
SA Objective	Score	Commentary
	-	<p>It is possible that the development of the site could affect water quality noting the form land use affecting part of the site. Further study necessary to understand this.</p> <p>Overall the site is considered to have a minor negative effect on this objective.</p> <p><u>Term</u></p> <p>Minor negative effects potentially reduced by careful development of the Site.</p> <p><u>Mitigation</u></p> <p>Development should take place away from the watercourse.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Whether the proposal will affect water quality is unclear. Further study is necessary. Depending on the conclusion of this assessment extensive land remediation works may be required in order for the proposal to represent a suitable location for housing without affecting the environment due to ground contaminants. The scale and costs associated with these works could render the proposal unviable (Low-Medium Risk).</p>
8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	-	<p><u>Likely Significant Effects</u></p> <p>The SFRA confirms that part of the Site, including the area needed for access is within Flood Zone 2. There is a high risk of flooding from surface water.</p> <p><u>Term</u></p> <p>Minor adverse effects potentially reducing with implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Detailed modelling required in order to understand impacts of flooding on development, developable area and access.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Site specific detail to be assessed at the planning application stage. Effects of climate change on flood risk</p>
9. To improve air quality.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located in excess of 500m of the Colne AQMA. The site is not located near a known source of air pollution. The Site is accessible to nearby services, facilities and sources of employment providing residents with realistic alternatives to travelling by car. The site is location removed from existing sources of pollution mean that the proposal unlikely to affect or be affected by air quality. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects.</p> <p><u>Mitigation</u></p> <p>Adoption of measures to promote access and travel by sustainable transport modes.</p>

	-			<p><u>Mitigation</u></p> <p>The site makes up a large part of the Green Infrastructure corridor which runs parallel to Pendle Water and as such is also likely to have value for wildlife. A much smaller development orientated away from the watercourse may result in a development which has much more limited effects. Implementation of net gains for biodiversity on site in line with policy, retaining and enhancing existing habitats where possible and creation of new habitats as appropriate within open space, landscaping, and on new buildings</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Success and management of open space and biodiversity measures. Low-medium risk. Effect of BNG on viability of development – Medium Risk.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0			<p><u>Likely Significant Effects</u></p> <p>The Site is not affected by heritage assets and as a result will have a neutral effect on the plan period.</p> <p><u>Term</u></p> <p>Permanent Neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-			<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site features some of the qualities of this landscape including enclosed field pattern and proximity to existing woodland, however is highly influenced by its</p>

Appendix 5: Assessment of Potential Housing Sites

P015 Former Brierfield Wastewater Treatment Works		
SA Objective	Score	Commentary
		<p>settlement edge location. The Site is comprised on greenfield land situated to the south west of Brierfield. The development would extend the built form of Brierfield into the countryside but is unlikely to have a significant negative effect on landscape character owing to the limited scale of the extension, absence of designated assets, and somewhat contained nature of the wider area by Pendle Water, the M65 and the Leeds Liverpool Canal. A minor adverse effect is assessed.</p> <p><u>Term</u> Minor adverse effects reducing towards neutral with mitigation measures and as the development matures.</p> <p><u>Mitigation</u> Scale, siting, layout and design of development, together with open space/landscaping may soften the effects of the development on these assets.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. The proposal benefits from some access to services and facilities locally as well as public transport, providing residents with a realistic alternative to the car as a means to travel. A proportion of residents will continue to travel by car however. The proposals also scores positively for Health objectives owing to the benefits associated with the provision of new housing. Regeneration objectives have a minor positive effect due to the opportunity provided for residents for new homes and support provided as a result of the development. The proposal also has negative effects on objectives for the use of resources due to the site's location within a safeguarded area. The loss of habitats, the site's proximity to ecological designations and the sites role within the Borough's Green Infrastructure Network mean that the site has an adverse effect for biological objectives. Adverse effects are also identified for landscape objectives owing to the site's edge of settlement location and visibility from wider public routes. Flood risk from a number of sources and the proximity of the site to a water course owing the site's form use also give rise to adverse effects for water related objectives. The proposal has limited suitability owing to the issues identified and as a result has a negative score for its effects on climate change. The proposal scores neutrally for other objectives.</p>		

P016 Roughs Barn, Salterforth		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u> The Site has capacity for 12 dwellings. The proposal will help to diversify and improve the quality of housing stock available within Salterforth. The proposal would make a limited contribution towards affordable housing need. Based on the above, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u> Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u> Planning obligations for the mix of housing</p>

14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u> The Site is located within the Drumlin Fields Landscape Character Area (Zone 13a). The Site is limited in scale and well contained by existing development. Its development would not harm the prevailing wider landscape context which contributes to this LCA. The comprised of greenfield land contained to the north and west by existing development. The development of the site for 12 dwellings would represent a minor extension of the built form of Salterforth into the countryside A neutral effect is assessed as likely for this objective.</p> <p><u>Term</u> Permanent neutral effects with mitigation measures.</p> <p><u>Mitigation</u> Scale, siting, layout and design of development, together with open space/landscaping may soften the effects of the development on these assets.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services but these benefits are limited by the scale of the site. The proposal has limited access to services and facilities available locally as well as public transport providing some degree of travel options for residents. Health and regeneration objectives have limited benefit also. The adverse effects of the proposal are limited due to the small scale nature of the proposal limiting the degree of effect caused. The most significant effects caused relate to the effects had on biodiversity and the effective use of land and use of resources. The small scale nature of the site and its contained location results in a neutral effect on the local landscape. Neutral effects are assessed for impact on climate change, the historic environment and flood risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P017 Land off Kelbrook Road, Salterforth			
SA Objective	Score		
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0
	+		
6. To encourage the efficient use of land and conserve and enhance soils.	-		

Likely Significant Effects

The Site is located within 400m of one or more transport service.

The development of this scale and local is unlikely to result on adverse effects for the highway network.

The development would not support investment in, or result in the loss of transport infrastructure and services.

The site is accessible to only a limited range of services and facilities. Walking/cycling infrastructure is available connecting the site to services in Barnoldswick. The proposal is likely to promote travel by car albeit by a limited degree which is unlikely to adversely affect existing infrastructure.

Accounting for the above, on balance, the site is considered to score a minor positive effect for this objective.

Term

Minor positive effect from the medium term.

Mitigation

Planning contributions may to taken towards infrastructure needs where justified. Investment in cycle storage and pedestrian and cycle links to encourage a modal shift.

Assumptions

Scope and viability to promote and invest in sustainable transport modes.

Uncertainties

Use of sustainable modes of travel in accessing the site. (Medium)

Likely Significant Effects

The Site is greenfield but not known to include Best and Most Versatile Land (BMV). As a result the site has a minor negative effect on this objective.

Term

Permanent minor adverse effects.

Mitigation

Adoption of higher densities to reduce land take if appropriate.

Assumptions

None.

Uncertainties

None.

the sustainable use of natural resources.			<p>Neutral effect for the plan period.</p> <p><u>Mitigation</u></p> <p>N/A</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	<p><u>Likely Significant Effects</u></p> <p>There are no designations affecting the Site.</p> <p>It is uncertain whether the site contained protected species. The Site is predominantly improved grassland.</p> <p>The Site does not form part of the Green Infrastructure Network.</p> <p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area. Overall, taking into account the above, the proposal is likely to have neutral effect for this objective.</p> <p><u>Term</u></p> <p>Neutral effects with potential for minor positive effects in the longer term with implementation of mitigation measures.</p>
	0		<p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Success and management of open space and biodiversity measures. Low-medium risk</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p><u>Likely Significant Effects</u></p> <p>A listed building is located on higher ground to the north east of the Site. Site capacity is limited and consistent with the scale of development of the wider settlement. The development would be seen in the context of the wider settlement and would not extend the settlement any closer to the heritage asset. Taking this into account it is assessed that the proposal would not harm the historic environment, and a neutral effect is concluded for this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects depending on the design details.</p> <p><u>Mitigation</u></p> <p>Scale and layout of development should be kept to the southern half of the site to align with existing built form. Boundary treatments, and appearance/design features of development to be agreed with the Council's Conservation Officer to ensure that any adverse impacts would be limited.</p>

Appendix 5: Assessment of Potential Housing Sites

P019 Land West of Sheridan Road, Laneshaw Bridge		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>The site does not play a significant role in the significance of the heritage assets.</p> <p><u>Uncertainties</u></p> <p>To be determined by site specific detailed evidence.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Rolling Upland Farmland Landscape Character Area (Zone 14b). The Site features some of the characteristics of this landscape character area being formed of rolling farmland that slopes steeply from the existing settlement. Land north of this having fulfils a more significant role, with the Site contained within the south. The proposal represents an infill opportunity providing a minor extension to the settlement, consistent with the scale, pattern and form of development. The Site is contained by existing residential development to the east, west and south, however is open to elevated land located to the north. Development would be seen in the context of existing development located in close proximity to the Site. A PROW runs north-south, within and along the western boundary of the Site. Whilst the PROW forms a route of the settlement to the open countryside to the north, the development nevertheless would result in a change to the character of the start of this route given that it currently enters an agricultural field at its starting point. Overall a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effects most significant during construction. These effects are likely to reduce in the longer term with the adoption of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Boundary treatments and sensitive/good quality design will ensure that the effects of developing the site on townscape and landscape are minimised.</p> <p><u>Assumptions</u></p> <p>Development is contained only in the southern part of the site continuing with the line of development from Hartley Gardens.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. The proposal has limited access to services and facilities available locally with accessible public transport providing some degree of travel options for residents. This is a significant contributor to the assessment of adverse effects for climate change though it should be acknowledged that the site is limited in scale and there will be means available to reduce this effect without rendering the site unviable. Health and regeneration objectives have limited benefit also relative the scale of the proposal. The adverse effects of the proposal relate to the effects had on the effective use of land and use of resources, and effect on the local landscape. This is caused by the undeveloped nature of the proposal and its location of steep ground rising above the linear settlement pattern. Neutral effects are assessed for wider objectives.</p>

The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u></p> <p>Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u></p> <p>Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0			<p><u>Likely Significant Effects</u></p> <p>The Site is not located within a Mineral Safeguarding Zone and as such would have a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Neutral effect for the plan period.</p> <p><u>Mitigation</u></p> <p>N/A</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	-	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within 100m of a locally designated ecological site.</p> <p>Part of the Site is covered by an area of ecological interest (LERN Record). The Site is predominantly improved grassland.</p> <p>The Site forms part of the Green Infrastructure Network. Its development would result in a loss to this network which is unlikely to be mitigated.</p> <p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area. Overall, taking into account the above, the proposal is likely to have a minor adverse effect for this objective.</p>

Appendix 5: Assessment of Potential Housing Sites

P020 Land south west of Spen Head Farm, Salterforth		
SA Objective	Score	Commentary
	-	<p><u>Term</u> Likely minor adverse effects reducing over the longer term with implementation of mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Success and management of open space and biodiversity measures. Low-medium risk</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u> The Site is unlikely to be affected by heritage assets and as a result will have a neutral effect on the plan period.</p> <p><u>Term</u> Permanent neutral effects</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u> The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site shares limited features with the prevailing landscape character being of limited scale. Though small in scale the development would extend the settlement pattern of Salterforth away from the core village area extending built form on a rural road connecting the village with Earby. The resultant scheme may result in a reduction in the physical and perceptual gap between Salterforth and Earby adversely affecting settlement identity. The Site is located within a designated TPO and its development is likely to have an adverse effect on this TPO. A minor adverse effect is identified.</p> <p><u>Term</u> Minor negative effects potentially reducing in the longer term with the implementation of mitigation measures.</p> <p><u>Mitigation</u> Scale, siting, layout and design of development, together with open space/landscaping may soften the effects of the development on these assets. Planting along the road way and off-setting of development away from the road to ensure that the perception of open countryside is maintained. All existing trees to be retained. Replacement hedgerow. Net gain of tree coverage.</p> <p><u>Assumptions</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P020 Land south west of Spen Head Farm, Salterforth				
SA Objective	Score		Commentary	
			<u>Uncertainties</u> None.	
Summary: The proposal scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. The proposal has limited access to services and facilities available locally with accessible public transport providing some degree of travel options for residents. Health and regeneration objectives have limited benefit also relative the scale of the proposal. The adverse effects of the proposal to the effects had on biodiversity and the effective use of land and use of resources, and effect on the local landscape. This is caused by the undeveloped nature of the proposal and its relative limited containment resulting in it being visible from wider vistas. Neutral effects are assessed for wider objectives.				

P021 Bridge Street Stoneyard, Colne				
SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		<u>Likely Significant Effects</u> The Site has capacity for 37 dwellings. The proposal will help to diversify and improve the quality of housing stock available within a deprived community of Colne. The proposal would unlikely contribute towards affordable housing need. Notwithstanding this based on the above, it is concluded that the proposal will have a positive effect for this policy objective. <u>Term</u> Permanent positive effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> Viability constraints are likely to affect housing and tenure provided on site (High Risk)	
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	-	+	0	<u>Likely Significant Effects</u> The proposal would result in the loss of land currently used for employment. The Site is located within 2000m of a major employment site (Colne Town Centre) as such is assessed to score positively for its accessibility to services. The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision. The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term although the benefits will be limited. The proposal would take place on land currently used for employment, resulting in potential job losses. Accounting for the above, the site is considered to score a neutral effect for this objective. <u>Term</u>

Appendix 5: Assessment of Potential Housing Sites

P021 Bridge Street Stoneyard, Colne				
SA Objective	Score			Commentary
				Permanent neutral effects. <u>Mitigation</u> None. <u>Assumptions</u> People living on site work locally and/or spend their wages locally. Unlikely given the scale of the proposal that enhancements to public transport services will be viable to enable an increase in service for accessing local employment. <u>Uncertainties</u> Use of sustainable modes of transport to access employment. Medium risk.
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	++	-	+	<u>Like Significant Effects</u> The Site is located within 800m of a town centre (Colne) No service provision is proposed on site. The development would result in increased pressure on existing services and facilities. The Site is within 800m of a primary school and 2,000m from a secondary school. The proposal will support the regeneration of the borough its development will also provide people local to the area with the opportunity to access housing. <u>Term</u> Minor positive effect for the plan period
	+			<u>Mitigation</u> The Site is accessible to a broad range of services and facilities. Contributions may be sought towards service provision where tests are met. <u>Assumptions</u> None. <u>Uncertainties</u> Unlikely that additional contributions could be had from development towards infrastructure/service enhancement due to the limited scale of the proposal.
4. To improve the health and wellbeing of those living and working in the Pendle area.	+	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of a GP or open space. Little Scope exists within the development to accommodate new open space. No health facilities are proposed and the development would increase pressure on existing facilities. The Site is bordered by existing residential uses and existing recreation. The proposed use of residential is considered compatible with existing uses. The provision of housing will increase choice and access to quality housing which meets the needs of the population. This has health and wellbeing benefits. Accounting for the above, on balance, the site is considered to have a neutral effect for this objective.
	0			<u>Term</u>

				Permanent neutral effects. <u>Mitigation</u> Provision of open space in accordance with standards on site (Scope however limited). <u>Assumptions</u> None. <u>Uncertainties</u> None.
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	++	0	0	<u>Likely Significant Effects</u> The Site is located within 400m of all assessed transport services. The development of this scale and location is unlikely to result on adverse effects for the highway network. The wider highway network experiences extensive queuing during peak hours. The proposal is however accessible by foot to most services and sources of employment, as well as high quality public transport services. The proposal would promote access by non-car modes. The development would not support investment in, or result in the loss of transport infrastructure and services. The site is accessible to only a limited range of services and facilities. The proposal is likely to promote travel by car albeit by a limited degree which is unlikely to adversely affect existing infrastructure. Accounting for the above, on balance, the site is considered to score minor positive effect for this objective.
	+			<u>Term</u> Minor positive effect from the medium term. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> Use of sustainable modes of travel in accessing the site. (Medium)
6. To encourage the efficient use of land and conserve and enhance soils.	++			<u>Likely Significant Effects</u> The Site is comprised of previously development land. <u>Term</u> Permanent significant positive effects over the plan period. <u>Mitigation</u> None. <u>Assumptions</u> None.

Appendix 5: Assessment of Potential Housing Sites

P021 Bridge Street Stoneyard, Colne		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site sits within the Industrial urban landscape character area. Some contribution is made to this landscape by buildings located along its frontage. The wider site is functional in its appearance. In its existing form and use, the site detracts from the wider built and natural environment. The redevelopment of the Site for a high quality housing development would provide the opportunity to revitalize the area and provide for a significant enhancement of the built and visual quality of the site and the wider areas. A minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Minor positive effects from completion (Long term).</p> <p><u>Mitigation</u></p> <p>Adoption of good design principles.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Viability to redevelop the Site for Housing.</p>
<p>Summary: The proposal scores positively for housing objectives owing to the benefits brought by new housing in providing increased choice and access to housing and associated benefits to health and wellbeing. Adverse effects associated with the proposal are limited relating to flood risk, drainage and water quality, reflecting the site's current and proximity to Colne Water. Positive to significant positive effects are associated with the reuse of developed land and benefits this could have for the townscape. The proposal also supports regeneration and transport objectives due to its close proximity to Colne Town Centre and public transport provision and location within a deprived community. Neutral effects are assessed for the economy given that the site is in active employment use, balanced against the economic benefits associated with the development, as well as ecology noting the potential for environmental enhancement of the river bank and corridor.</p>

SA Objective	Score	Commentary
		<p>the potential to enhance the quality of the wider natural and built environment which is currently of limited quality. A minor positive effect is assessed for this objective.</p> <p><u>Term</u> Minor positive effects from completion (Long term).</p> <p><u>Mitigation</u> Adoption of good design principles.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Viability to redevelop the Site for Housing.</p>
<p>Summary: The proposal scores positively for housing, economic, and health objectives owing to the benefits brought by new housing in providing increased choice and access to housing in a deprived part of Nelson and associated wellbeing benefits, support given to the local economy. Significant adverse effects associated with the proposal are limited relating to flood risk, drainage and water quality, reflecting the site's current and proximity to Walverden Water. Further assessment in relation to this necessary, including understanding how altered levels on site affect flood risk for potential future residents and those within the wider locality. Significant positive effects are associated with the reuse of developed land and benefits this could have for the townscape. The proposal also supports regeneration and transport objectives due to its close proximity to Colne Town Centre and public transport provision and location within a deprived community. Neutral effects are assessed for ecology noting the potential for environmental enhancement of the river bank and corridor.</p>

SA Objective	Score	Commentary
		Degree of effect on heritage asset by development of the Site for housing. Medium-high risk.
14. To conserve and enhance landscape character and townscapes.	-	<p>Likely Significant Effects</p> <p>The Site is located within the Drumlin fields Landscape Character Area (Zone 13a) however shares none of the special character or features of this character area. The Site is greenfield, it is undesignated and not noted for its landscape quality but is likely to form the setting for an existing listed building. A TPO exists along the western boundary of the Site. As such it is considered that developing the site would have a minor adverse effect on this objective.</p> <p>Term</p> <p>Minor adverse effect reducing where mitigation implemented.</p> <p>Mitigation</p> <p>Directing development away from the listed building. Adoption of good design principles. Boundary treatments. Development to be suitably offset from the TPO.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>None.</p>
<p>Summary: The proposal scores positively for housing and economic objectives owing to the benefits brought by new housing in providing increased choice and access to housing and associated wellbeing benefits, support given to the local economy. Adverse effects are associated with the impact on water resources and flood risk due to the proximity of the site to an existing watercourse. Adverse effects are found for the effective use of land, biodiversity, heritage, and landscape due to the undeveloped condition of the site, its edge of settlement location, its relationship to the wider built and natural environment. Adverse effects are also assessed for health due to the site's proximity to the Barnoldswick Waste Water Treatment Works. Further assessment is necessary to understand the degree of these affects.</p>

4. To improve the health and wellbeing of those living and working in the Pendle area.	++	0	-	<p>Likely Significant Effects The Site is located within 800m of a GP and open space. Scope exists within the development to accommodate new open space. No health facilities are proposed and the development would increase pressure on existing facilities. The Site is located adjacent to the Colne-Preston Railway which may cause noise/vibration issues for residents. The provision of housing will increase choice and access to quality housing which meets the needs of the population. This has health and wellbeing benefits. Accounting for the above, on balance, the site is considered to have a minor positive effect for this objective.</p> <p>Term Likely permanent minor positive effects.</p> <p>Mitigation Site layout and orientation and deployment of technical standards may reduce effects subject to further assessment.</p> <p>Assumptions None.</p> <p>Uncertainties Viability to accommodate higher specifications to overcome issues arising from the alignment of the railway (medium – high risk)</p>
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	++	0	0	<p>Likely Significant Effects The Site is located within 400m of all transport services assessed. The development of this scale and locality is unlikely to result on adverse effects for the highway network. The proposal is accessible to services and sources of employment as well as public transport which is available in Brierfield. The proposal would promote access by non-car modes assisting in encouraging a modal shift. The development would not support investment in, or result in the loss of transport infrastructure and services. The site is accessible to good range of services and facilities, including transport facilities. The proposal is likely to promote travel by car helping to reduce effects on existing infrastructure. Accounting for the above, on balance, the site is considered to score minor positive effect for this objective.</p> <p>Term Minor positive effect from the medium term.</p> <p>Mitigation None.</p>

Appendix 5: Assessment of Potential Housing Sites

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. The Site is comprised of former railway sidings used for storage. Its development has the potential to benefit the LCA. The Site is located near to a conservation area and likely to form part of its setting given its proximity to this conservation area. The Site is not attractive in its current form and detracts from the built environment. Its redevelopment therefore gives rise to the opportunity to enhance the local area to the benefit of the historic environment. The proposal will have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Likely positive minor effects in the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Adoption of high quality design principles which is sensitive and responsive to local vernacular.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Viability to provide a high quality scheme.</p>
<p>Summary: The proposal scores positively for the majority of the objectives. This is due to the nature of the proposal and associated benefits this has particularly in meet housing need and diversifying and improving the quality of housing. The proposal will help to regenerate Brierfield and its redevelopment will improve the quality of the built environment. The proposal relates to land which is developed and in employment use. As such neutral effects is assessed for this objective given that the proposal would remove jobs locally but will support local businesses during and post construction phase. The proposal is subject to some flood risk. It is likely that this can be managed through the development of the site although it is likely that this would affect the viability of the proposal.</p>		

P053 Green Works, Colne		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 26 dwellings. The proposal will help to diversify and improve the quality of housing stock available within Colne. The proposal is unlikely to provide any affordable housing due to low viability. Notwithstanding this, on balance, and taking into account the wider benefits brought by the proposal towards a deprived community, it is concluded that the proposal will have a positive effect for this policy objective.</p> <p><u>Term</u></p>

Appendix 5: Assessment of Potential Housing Sites

P055 Land off Foster Road, Barnoldswick		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The site has a strong field pattern with some drumlin like quality evident as reflected by its rolling landscape. The rolling landscape serves to increase the visibility of the site from wider viewpoints, however the landscape characteristics of the site are not unlike those which already feature development to the west and south. The Site is well linked to and highly influenced by the settlement edge. The Site is not recognised for its landscape or townscape quality through formal designation. The northern and western boundaries of the Site are subject to a TPO. The Site is relatively limited in scale and would round off the built up area. A PROW traverses the site north to south with a further PROW crossing on high ground to the west of the Site. Views and experiences from the PROW would alter with the development of the Site, though it should be acknowledge that built form already exists in close proximity to the PROW. The Site is visible from Brogden Road to the north and its development is likely to have an urbanizing effect. A minor adverse effect is assessed for this objective. This assessment takes into account the findings of the inspector in the recent appeal of the site and is in response to the absence of any landscape or historical designation affecting the site.</p> <p><u>Term</u></p> <p>Minor adverse effect likely most significant and harmful during the construction phase, reducing over time as the development integrates into the wider landscape and setting of the town and as mitigation measures mature.</p> <p><u>Mitigation</u></p> <p>Adoption of high quality design principles which is sensitive and responsive to local vernacular. Avoidance of development at the highest parts of the site to limit longer range visibility. High quality boundary treatments. Suitable offset to TPO along boundary of the Site with TPO retained.</p> <p><u>Assumptions</u></p> <p>None</p>
<p>Summary: The proposal has a positive effect for housing, the economy, and health. This is in acknowledgement of the benefits the proposal will have in contributing to meeting local housing need, the support given to the local economy, and the health benefits provided by homes of the right size and type for wellbeing. The site has an adverse effect on securing the effective use of land with the site being greenfield. The greenfield and edge of settlement location combined with local landscape sensitivity which is unique to the area mean that its development would adversely affect landscape objectives. The proposal is located close to a watercourse, however there is limited risk of flooding within the site with this limited to the south. Opportunities to enhance pedestrian linkages and recreational opportunities exist. The absence of designations affecting the site and its relative accessibility means that the site has a borderline positive effect for climate change however this does depend on the technical specification, layout and quality of new homes developed at the site. The location of the site in an area of relatively high housing demand and viability means that the proposal is likely to be able to support measures to reduce carbon emissions.</p>

SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>There are a number of listed buildings in the area which might be influenced by the development site including Blacko Tower. The Site is limited in scale, and development would be seen in the context of the wider built environment which runs along Gisburn Road. Opportunity likely exists to minimise the potential for adverse effects applying good design principles and providing a high quality boundary treatment where needed.</p> <p><u>Term</u></p> <p>Initial adverse effects reducing to neutral with implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Adoption of high quality design which is sensitive and reflects the wider built environment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>The degree that the proposal affects the wider historical environment is somewhat dependent on the type, scale and appearance of the development which comes forward (Medium Risk)</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site occupies the lower slopes lead up to Blacko Tower. The Site has some characteristics of the Moorland Fringe Landscape including dry stone walls, rising open landscape, and commanding views but these are limited by the close relationship of the Site to the wider settlement. The site occupies land immediately adjacent to Gisburn Road. The site is small in scale and would provide for a ribbon type development. Development of the Site would reflect the elongated form of Blacko. Its development would however disrupt views northwards into the open countryside from Gisburn Road and inevitable result in a change to the character of the area. A minor adverse effect is assessed.</p> <p><u>Term</u></p> <p>Permanent minor adverse effect.</p> <p><u>Mitigation</u></p> <p>Adoption of high quality design principles which is sensitive and responsive to local vernacular.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None</p>
<p>Summary: The proposal has a limited positive effect for housing. This is in acknowledgement of the benefits the proposal will have in contributing to meeting local housing need. The proposal has a neutral effect for economic and regeneration objectives. The site has a minor adverse effect for transport objectives due to the limited frequency and quality of the public transport service operating past the site. This is due to the relatively limited connectivity of the site to existing services and sources of employment, a geography which is shared across Blacko. The proposal's limited size along Gisburn Road means that the site scores neutrally for a majority of objectives being largely unaffected by existing designations. The linear form of</p>

SA Objective	Score		Commentary
the proposal is consistent with the settlement pattern which is a long ribbon development along Gisburn Road. The lack of these designations and the limited scale of the proposal is likely the reason why the finding of a positive effect for Climate Change has been assessed for this site. The site have an adverse effect on securing the effective use of land with the site being greenfield. The greenfield and edge of settlement location and elevated position does mean that its development would adversely affect landscape objectives.

Appendix 5: Assessment of Potential Housing Sites

P059 Former Winewall Mill, Trawden				
SA Objective	Score		Commentary	
			None.	
Summary: The proposal has a limited positive effect for housing. This is in acknowledgement of the benefits the proposal will have in contributing to meeting local housing need. The proposal has a positive effect for economic and regeneration objectives noting the proximity of the site to Colne Town Centre and its proposal to redevelop a previously developed site. This also benefits objectives to make efficient use of land. The site has a minor positive effect for transport objectives due to the site’s accessibility to public transport routes and has minor positive effects for health objectives noting the proximity of the site to existing open space. There are adverse effects assessed for flood risk and water quality objectives. This is largely due to the site’s located in close proximity to a nearby watercourse and associated flood risk. The previously developed nature of the site gives rise to risk of pollutants entering the watercourse. The proposal has an unclear role for wildlife, requiring further assessment. A neutral effect is assessed for heritage objectives despite the site’s location within a conservation area. This acknowledges the limited role the site fulfils in its current condition to this designation. An uncertain effect is measured for landscape objectives due to the site’s green belt designation and previously developed condition. Proposals will need to ensure that there are no adverse effects caused to openness. Taking the above into account a minor positive effect is assessed for climate change objectives.

SA Objective	Score			Commentary
	+			<p>The provision of housing will increase choice and access to quality housing which meets the needs of the population. This has health and wellbeing benefits. Accounting for the above, on balance, the site is considered to have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Minor positive effect from the medium term.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within 400m of one or more transport service.</p> <p>Congestion exists locally at peak periods. The proposal is unlikely to make a significant contribution to this noting the site’s highly accessible location.</p> <p>The development would not support investment in, or result in the loss of transport infrastructure and services.</p> <p>Accounting for the above, the site is considered to score a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Minor positive effect from the medium term.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
	+			
6. To encourage the efficient use of land and conserve and enhance soils.	++			<p><u>Likely Significant Effects</u></p> <p>The Site is previously developed and as such has a significant positive effect for this objective.</p> <p><u>Term</u></p> <p>Permanent significant positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P060 Former Mansfield High School, Taylor Street, Brierfield		
SA Objective	Score	Commentary
		<u>Uncertainties</u> None.
7. To conserve and enhance water quality and resources	- -	<u>Likely Significant Effects</u> The Site is located within 50m of a watercourse or water body with the site sitting on a culverted stream. The development of the site has the potential to adversely affect this watercourse and the structural integrity of this culverted waterway. The proposal may affect water quality during the construction process owing to the presence of this culverted waterway. Overall the site is considered to have a minor adverse effect on this objective. <u>Term</u> Minor adverse effect reducing to neutral with implementation of sufficient mitigation measures. <u>Mitigation</u> Sufficient buffer between watercourse and development, keeping the course free from development enabling maintenance. Explore potential to deculvert and for additional water storage capacity on site to contribute to the drainage system. Preventative measures put in place during construction process to stop pollutants entering the watercourse. <u>Assumptions</u> None. <u>Uncertainties</u> Impact of water infrastructure on viability (medium – high risk)
8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	-	<u>Likely Significant Effects</u> The SFRA confirms that part of the site is subject to flood risk with a culverted watercourse running below the site. Some surface water flooding is experienced. The SFRA does not however conclude that this is a barrier to developing the site for housing. A minor adverse effect is assessed for this objective. <u>Term</u> Minor adverse effect reducing with mitigation measures. <u>Mitigation</u> Avoidance of FZ2 for development as far as possible. Flood storage areas to be provided. Adoption of the SuDs hierarchy to manage surface water drainage from the site. <u>Assumptions</u> None. <u>Uncertainties</u> Scope for measures within the area of the Site and Viability. Site specific modelling may show site is in FZ1 (to be confirmed in SFRA).
9. To improve air quality.	0	<u>Likely Significant Effects</u>

Appendix 5: Assessment of Potential Housing Sites

P060 Former Mansfield High School, Taylor Street, Brierfield		
SA Objective	Score	Commentary
		<p>The Site is located in excess of 500m of the Colne AQMA. The site is not located near a known source of air pollution. The proposal is highly accessible location help to promote a modal shift. As such it is unlikely that the proposal would contribute significantly towards air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Likely permanent neutral effects.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> The extent to which the locational sustainability of the site promotes non-car modes of transport (low-medium risk)</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	<p><u>Likely Significant Effects</u> The site has a suitability score of 4.00. The site therefore has a minor positive effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0	<p><u>Likely Significant Effects</u> The Site is not located within a Mineral Safeguarding Zone and as such would have a neutral effect on this objective.</p> <p><u>Term</u> Neutral effect for the plan period.</p> <p><u>Mitigation</u> N/A</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u></p>

Appendix 5: Assessment of Potential Housing Sites

14. To conserve and enhance landscape character and townscapes.	+		<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. The Site does not contribute to this character area, disrupting the local street pattern. Whilst the Site provides for openness is not accessible for public use. The site is located within the built up area where the environmental quality is currently limited. The redevelopment of the Site for housing could enhance the existing environment significantly where new homes are high quality in their design. The proposal will have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effects from the medium term.</p> <p><u>Mitigation</u></p> <p>Adoption of high quality design principles.</p>

Appendix 5: Assessment of Potential Housing Sites

P060 Former Mansfield High School, Taylor Street, Brierfield		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Low viability. High Risk.</p>
<p>Summary: The proposal has positive effects for housing and employment due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock in Brierfield and support provided to the local economy. This has wider health benefits with new homes aiding the wellbeing of residents providing households with the opportunity to move out of poverty. The site is highly accessible contributing to encouraging a modal shift. The proposal seeks to redevelop and existing redundant site, making effective use of land and enhancing townscape, and thus contributes towards objectives of addressing climate change. The site is not affected by heritage or biodiversity concerns. Flood risk and water infrastructure form the main constraints to the development with a culverted watercourse running underneath the site. The required engineering works to address this issue may render the site unviable.</p>

Appendix 5: Assessment of Potential Housing Sites

P062 Land adjacent to Silentnight Beds, Barnoldswick		
SA Objective	Score	Commentary
		<p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site does not feature any of the qualities of this LCA comprising of a flat area of land on the edge of Barnoldswick which is highly influenced by its built surroundings. The Site is largely contained by neighbouring uses extending southwards as far as the Silentnight beds site, with existing residential areas to the north and west, and the site of West Craven High School to the south west. The Site provides for a logical extension of the built form of Barnoldswick without any real harm to the local landscape.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects with adoption of mitigation measures.</p> <p><u>Mitigation</u></p> <p>High quality design, achieving a sense of place. Sensitive boundary treatments especially to the east and south.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing and employment due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock in Barnoldswick and support provided to the local economy. This has wider health benefits with new homes aiding the wellbeing of residents providing households with the opportunity to move out of poverty and its accessibility to open space. This is offset by the potential harm caused to resident health by the operations of Silentnight which is adjacent to the site. Measures in the design and layout of the proposal should be incorporated into the proposal to reduce any harm to acceptable levels. The site is in close proximity to services, facilities and sources of employment available within Barnoldswick. Its development will therefore positively contribute to the regeneration of the town. The site is however inaccessible by vehicle and is not developable without a suitable access. The site is undeveloped and as such has adverse effects for the efficient use of land and protecting natural resources. The site is subject to flood risk from groundwater flooding and this will need to be managed through the design and layout of the proposal. The site is heavily vegetated in its current form and likely to be of some importance to wildlife. Further assessment is needed to understand the extent and quality of the site in its current condition. A minor adverse effect is assessed for biodiversity objectives. The site is not subject to heritage constraints. It is assessed as having a neutral effect on landscape/townscape objectives noting the lack of notable landscape features with positively contribute to the local landscape character area or setting of Barnoldswick and its containment by wider development. Overall the site is assessed as having a minor positive effect for climate change objectives, the principle issues affecting the site are its access, proximity to industrial uses, potential ecological value and flood risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P064 Brook Shed, Earby		
SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is situated within the Earby Conservation Area but has no direct link to any Listed Building. The Site is overgrown and vacant and in its current condition detracts from the built quality of the wider area. The redevelopment of the Site has the potential to enhance and contribute to the built character and quality of the area. Such a development will however need to maintain the existing chimney and remnants of the engine house. The degree of positive effect associated by the site's redevelopment on the historic environment is therefore dependent on how sensitively its redevelopment is undertaken. A minor positive effect is assessed for this objective, though there is the possibility of significant positive effects depending on the detailed design of the proposal.</p> <p><u>Term</u></p> <p>Minor positive effects potentially significant positive effects in the longer term following completion of the development depending on the scheme brought forward.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a), however does not contribute to this LCA being formed of PDL entirely contained within Earby. The Site is overgrown and vacant and in its current condition detracts from the built quality of the wider area. The redevelopment of the Site has the potential to enhance and contribute to the built character and quality of the area. A minor positive effect is assessed.</p> <p><u>Term</u></p> <p>Likely minor positive effects in the longer term following completion of the development.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing and employment due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock in Earby and support provided to the local economy. This has wider health benefits with new homes aiding the wellbeing of residents providing households with the opportunity to</p>

SA Objective	Score		Commentary	
access housing that meets their needs. The site is highly accessible contributing to encouraging a modal shift. The proposal seeks to redevelop and existing redundant site, making effective use of land and enhancing townscape, and thus contributes towards objectives of addressing climate change, and heritage given the proposals local next to Earby Conservation Area. The site is not affected by heritage or biodiversity concerns. Flood risk and water infrastructure form the main constraints to the development with Net Cut running underneath along the site boundary. New cut is subject to flood risk. Further detailed assessment is needed to understand what measures are required to address this risk in a satisfactory way. The measures required may reduce the viability of the proposal and its capacity to provide affordable housing.

		None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Carr Hall and Wheatley Lane Conservation Area and is likely in the setting of Launds Farm (a listed building). The site is considered to contribute significantly to the significance and setting of this historic environment. The development of the site would significantly alter the character of area. The assessed affect would be less than substantial to substantial harm causing significance adverse effects for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects unlikely to be reduced by mitigation measures.</p> <p><u>Mitigation</u></p> <p>Public Benefits Test likely required.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site shows a weak contribution to this character area due to its limited scale and close relationship to existing built form. Open land to the east forms part of Trough Laithe Strategic Urban Extension which will change significantly the character of the area. The Site is located within the Carr Hall and Wheatley Lane Conservation Area and is considered to make an important contribution to the setting and significance of this heritage asset. Lauds Farm (a listed building) also features within this area. The development of the Site is likely to result in substantial harm the historic environment given that it is current undeveloped in this location. Mitigation measures are not likely to effective in reducing this. Significant adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P065 Land at Higher Parrock Farm, Parrock Road, Barrowford				
SA Objective	Score		Commentary	
Summary: The proposal has positive effects for housing and employment due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and support provided to the local economy. The site has little benefits for health, regeneration and transport objectives due to the limited connectivity of the site and constrained scope for open space. The proposal relates to greenfield land and thus has adverse effects on securing the effective use of land and land resources. The proposal is located within the Carr Hall and Wheatley Lane Conservation Area and in an elevated landscape. The proposal would not be consistent with the character and built qualities of this conservation area and therefore is likely to cause a significant degree of harm towards heritage and townscape objectives. The proposals is relatively unaffected by flood risk and drainage concerns. Overall the proposal is assessed as having a neutral effect on climate change noting its limited scale.

Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities. Development proposals should be confined to and/or well related to the existing built footprint of the site to limit effects on the wider area.</p> <p>Assumptions None</p> <p>Uncertainties None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment objectives due to the loss of access to jobs locally (though these jobs are retained in Pendle). The site has benefits for health, regeneration and transport objectives due to the connectivity of the site and scope for open space provision including enhanced connectivity to the wider open countryside. The proposal relates land which is both greenfield and brownfield and as such has mixed effects for objectives which seek to make effective use of land. The proposal has an adverse effect on local landscape owing to the intensification of urban development which is not consistent with the character of the existing area. The proposal is also affected by flooding and drainage concerns and water infrastructure issues. Addressing these issues may reduce developable area and/or threaten the viability of the proposal. These effects cause the finding of a minor adverse effect on climate change owing to the constrained suitability of the site for housing in its current condition (though these issues could be addressed through the site's development).</p>		

P068 Land at Barnoldswick Road/Colne Road, Kelbrook		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p>Likely Significant Effects The Site has capacity for 64 dwellings. The proposal help to improve the quality of existing housing stock and diversify housing land supply including affordable housing needs. Taking this into account, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p>Term Permanent minor positive effects from the short-medium term</p> <p>Mitigation Planning obligations for the mix of housing</p> <p>Assumptions</p>

				None. <u>Uncertainties</u> None.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	0	0	<u>Likely Significant Effects</u> The development site is not in use for employment. The Site is available for employment and could provide a suitable location for a mixed use development. The Site is located in excess of 2,000m of the nearest major employment site. The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision. The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to score a neutral effect for this objective. <u>Term</u> Likely permanent neutral effects. <u>Mitigation</u> None. <u>Assumptions</u> People living on site work locally and/or spend their wages locally. <u>Uncertainties</u> Use of sustainable modes of transport to access employment. Medium risk.
	0			
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	+	-	0	<u>Like Significant Effects</u> The Site is located within 800m of one or more key service. No service provision is proposed on site. The development would result in increased pressure on existing services and facilities. The Site is within 2000m of a primary school The proposal will provide people local to the area with the opportunity to access housing. It is accessible to a range of local services and its development will support local businesses. Accounting for the above, on balance, the proposal is assessed to have a neutral effect for this objective. <u>Term</u> Permanent neutral affect. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u>

P068 Land at Barnoldswick Road/Colne Road, Kelbrook		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Drumlin Field Landscape Character Area (Zone 13a). The site is flat and open in its character and is not considered to contribute towards the landscape quality in this area. Whilst contained by existing road infrastructure to the south and east, the development of the Site would significantly extend the built extent of Kelbrook into the open countryside and see a significant expansion to the west of the A56 which is not characteristic of the settlement. The site itself is not formally designated for its quality. The development would be prominent from the roadside. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent minor adverse effects even with mitigation.</p> <p><u>Mitigation</u></p> <p>Careful siting and design of new dwellings. Boundary treatment work.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment due to the relative inaccessibility of employment locally at strategic sites (though local opportunities are available). The site has limited benefits for health, regeneration and transport objectives due to limited connectivity of the site to existing services and facilities (reflecting its location adjoining a rural service centre). The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has an adverse effect on local landscape owing to the site's edge of settlement location. The proposal has limited flooding and drainage concerns and water infrastructure issues. The relatively limited constraints to development on the site and its accessible to some services, including public transport results in the site scoring positively for climate change objectives.</p>

SA Objective	Score	Commentary
		None <u>Uncertainties</u> None.
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site is considered to make a positive contribute to this character area with features of contain fields, trees and woodland, and a gently climbing slope. The development of the site will have some harm to landscape character at a local scale. The Site extends significantly into the open countryside, and does not reflect the existing pattern of development. The development of the Site has already been found to adversely affect for the historic environment. The Site is designated Green Belt and considered to continue to function in response to the five purposes. A PROW crosses through the centre of the Site and would experience significant change should the site be developed for housing. Significant Adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent Significant adverse effects.</p> <p><u>Mitigation</u></p> <p>Mitigation Not available.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment due to the relative inaccessibility of employment locally at strategic sites. The site has limited benefits for health, regeneration and transport objectives due to limited connectivity of the site to existing services and facilities (reflecting its location adjoining a rural service centre). The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has an adverse to significant effect on local landscape owing to the site's edge of settlement location and green belt designation. The proposal also affects the historic environment resulting in at least less than substantial harm requiring further assessment and possible examination of public benefits in accordance with the NPPF. The proposal is affected flooding and drainage concerns resulting in a minor adverse effect for this objective. This may result in a lower site capacity. The constraints to development on the site and its limited accessibility results in the site having a low neutral score for climate change objectives.</p>		

P075 Land between Moorlands and the Homelands, Barnoldswick

13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<p>Likely Significant Effects</p> <p>The Site is located within the Calf Hall and Gillians Conservation Area and is likely to contribute to the significance of this conservation area. No listed buildings are located in close vicinity to the site. The development of the site is likely to harm the historic environment due to the type and scale of the proposal not reflecting that which is characteristic of the wider conservation area. The proposal is in an elevated location and likely visible from public vantage points to the west. Less than substantial harm is likely to arise as a result of the development. A minor adverse effect is assessed for this objective.</p> <p>Term Likely permanent minor adverse effect. Reducing with a smaller development on the site.</p> <p>Mitigation</p>

Appendix 5: Assessment of Potential Housing Sites

P075 Land between Moorlands and the Homelands, Barnoldswick		
SA Objective	Score	Commentary
		<p>A much reduced density consistent with the form of development already located in the area with a high quality design and features/materials which reflect those within the local built environment could reduce or remove the observed harm to the conservation area. It is however likely that such as development will not provide sufficient capacity to warrant allocation through the Pendle LPP2.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is largely contained by surrounding land uses but is located in an elevated position with some outward views towards Barnoldswick and wider open countryside. The Site is located within the Drumlin Field (Zone 13a) but makes a limited contribution to this LCA noting the limited scale of the site and its containment. The Site is located within the Calf Hall and Gillians Conservation Area and is likely to contribute to the significance of this conservation area. No listed buildings are located in close vicinity to the site. The development of the site is likely to harm the historic environment. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u> Likely permanent adverse effect. Reducing with a smaller development on the site.</p> <p><u>Mitigation</u> A much reduced density consistent with the form of development already located in the area with a high quality design and features/materials which reflect those within the local built environment could reduce or remove the observed harm to the conservation area. It is however likely that such as development will not provide sufficient capacity to warrant allocation through the Pendle LPP2.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal has positive effects for housing and employment due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock in Barnoldswick and support provided to the local economy. This has wider health benefits with new homes aiding the wellbeing of residents providing households with the opportunity to move to new quality homes which meet their housing needs. The site is in close proximity to services, facilities and sources of employment available within Barnoldswick. Its development will therefore positively contribute to the regeneration of the town. The site has access constraints. Manchester Road features a number of bottlenecks due to a narrowing of the highway. The proposal, whilst limited in scale, will contribute to a worsening of traffic conditions on the highway network and increase the potential for vehicle conflict. There is no footpath on Manchester Road, requiring pedestrians to walk in the highway. The proposal has highway safety concerns and is therefore assessed as having a minor adverse effect for this objective. The site comprises part of garden land and part an undeveloped field and therefore has mixed effects for use of land objectives. The site is not known to be affected by flood risk and is unlikely to fulfil an important role for wildlife – though further assessment of both these matters will be necessary. A minor adverse effect is assessed for heritage and landscape objectives. This is due to the elevated location of the site and its wider visibility, the scale and type of development proposal and its location within the Calf Hall and Gillians Conservation</p>

1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++		<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 165 dwellings. The proposal will make a significant contribution to housing land supply help to improve the quality of existing housing stock and diversify housing land supply including affordable housing needs. Taking this into account, it is concluded that the proposal will have a significant positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent significant positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	<p><u>Likely Significant Effects</u></p> <p>The development site is not currently used for employment.</p> <p>The Site is located within 2,000m of the nearest major employment site (Whitewalls Industrial Estate).</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Likely permanent minor positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>People living on site work locally and/or spend their wages locally.</p>
		+	

Appendix 5: Assessment of Potential Housing Sites

P078 Land at Higher Park Farm, Barrowford				
SA Objective	Score			Commentary
				<u>Uncertainties</u> Use of sustainable modes of transport to access employment. Medium risk.
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	++	-	0	<u>Like Significant Effects</u> The Site is located within 800m of Barrowford local centre. No service provision is proposed on site. The development would result in increased pressure on existing services and facilities. The Site is within 2000m of a primary school. The proposal will provide people local to the area with the opportunity to access housing. It is accessible to some local services and its development will support local businesses. Accounting for the above, on balance, the proposal is assessed to have a minor positive effect for this objective.
	+			<u>Term</u> Permanent minor positive affect. <u>Mitigation</u> Contributions may be sought towards service provision where there is a shortfall and the proposed development would exacerbate this problem. <u>Assumptions</u> None. <u>Uncertainties</u> None.
4. To improve the health and wellbeing of those living and working in the Pendle area.	+	+	-	<u>Likely Significant Effects</u> The Site is located within 800m of a GP or open space. Proposals include a significant package of open space facilities including a mountain bike cycling area and fishing ponds. No health facilities are proposed and the development would increase pressure on existing facilities. The Site is bordered by existing residential, open countryside, park, cemetery, and the M65 motorway. There is a degree of conflict between the proposed use and the motorway and the adverse effects on health likely from noise and pollution.
	+			Overall the proposal is considered to have a minor positive effect for this objective with mitigation measures <u>Term</u> A likely minor positive effect from the medium term with implementation of mitigation measures. <u>Mitigation</u> Full delivery of open space proposed. Financial contributions towards open space provision where required. Development to be located away from the Motorway with sufficient boundary treatment and design measures to reduce the impacts of the motorway on future occupiers. <u>Assumptions</u> None.

Appendix 5: Assessment of Potential Housing Sites

13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p><u>Likely Significant Effects</u></p> <p>The Site is located in close proximity to Barrowford Conservation Area, a cluster of listed buildings at Barrowford Park Entrance, and listed structures associated with the Leeds Liverpool Canal. The development of the Site is unlikely to harm this historic environment taking into account the lack of visual or physical connections between the site and these assets. A neutral effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects.</p> <p><u>Mitigation</u></p> <p>Sufficient distancing and buffer planting to ensure that the effects of developing the site on the historic environment minimised. Adoption of a high quality design, with vernacular informed by this local historic environment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	--		<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Industrial Foothills and Valleys Landscape Character Area (Zone 6a) and contribute positively to the quality of this Character Area within this part of the Borough providing a break in development with providing a well-defined field pattern and woodland close to local watercourses and key sources of recreation. The break provided by the Site is all the more important given the role this land has in maintaining separation between Barrowford, Nelson and Colne. The development of the Site for housing would</p>

Appendix 5: Assessment of Potential Housing Sites

P078 Land at Higher Park Farm, Barrowford		
SA Objective	Score	Commentary
		<p>have potentially significant adverse effects on local landscape character. The Site is designated Green Belt and is found in evidence to maintain a critical role in the Green Belt. The site is covered by numerous TPOs. These TPOs constrain access into the site. The felling of which for access will alter the character of Colne Road. There are no very special circumstances under which to allow the development of the Site. Overall a significant adverse effect which could not be mitigation under current circumstances.</p> <p><u>Term</u> Permanent Significant adverse effects.</p> <p><u>Mitigation</u> Mitigation Not available.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal has positive effects for housing and employment objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic benefits. Positive effects are also found for health, regeneration and transport objectives due to the benefits associated with the proposal which includes extensive recreation area. A neutral effect for biodiversity is found in the acknowledged dual function this area would have in creating and enhancing habitats for wildlife. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has an adverse to significant effect on local landscape owing to the site's edge of settlement location and green belt designation. The proposal has neutral effects for heritage noting the contained nature of the site. The proposal has limited flooding or drainage concerns resulting in a neutral effect for this objective. A negative effect is found for effects on climate change. This is due to the longer distances necessary to travel to key services (despite being around 800m from the boundary of Barrowford local centre). The length of these trips may encourage travel by car.</p>

12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0
			<p><u>Likely Significant Effects</u></p> <p>The Site does not affect any designated site.</p> <p>The role of the Site for protected species is at this point unknown. The Site is primarily arable farmland.</p> <p>The Site does not affect the Green Infrastructure Network.</p> <p>Overall the proposal is considered to likely have a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effect in the longer term with adoption of mitigation measures</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		
			<p><u>Likely Significant Effects</u></p> <p>There are several listed buildings located distant from the Site which are unlikely to be affected by the Site's development. A neutral effect is concluded for this objective.</p> <p><u>Term</u></p> <p>Subject to site specific evidence and consultee advice, the proposal is likely to result in a neutral effect in the long term.</p> <p><u>Mitigation</u></p> <p>High quality design and boundary treatment works should help minimise any potential effect on the historic environment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-		
			<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site sits elevated within the local landscape with outward views of drumlin fields located to the north. The site contributes to the local character affording views of this landscape from Salterforth and public routes. The Site development would extend the settlement pattern of Salterforth away from the core village into the open countryside, and disrupt the settlement pattern. The resultant scheme may result in a reduction in the physical and perceptual gap between Salterforth and Earby adversely affecting settlement identity. A minor adverse effect is identified for this objective.</p> <p><u>Term</u></p> <p>Minor negative effects potentially reducing with adoption of mitigation measures to be agreed with the Council.</p>

Appendix 5: Assessment of Potential Housing Sites

P080 Hayfield Meadow, Earby Road, Salterforth		
SA Objective	Score	Commentary
		<p><u>Mitigation</u></p> <p>Scale, siting, layout and design of development, together with open space/landscaping may soften the effects of the development on these assets. Planting along the road way and off-setting of development away from the road to ensure that the perception of open countryside is maintained.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for health, regeneration and transport objectives due to the benefits associated with the proposal and its accessibility to local services provision and facilities. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has an adverse to significant effect on local landscape owing to the site's edge of settlement location and relationship to wider unique and sensitive landscapes. The proposal has adverse effects for flood risk from surface water. Measures will be required to be adopted within the layout and design of the development to address this issue with resulting in residual risk for existing or new residents. This may reduce the developable area of the site. Beyond this the site has relatively limited constraints resulting in neutral effects noted for remaining objectives including climate change.</p>

		None.
14. To conserve and enhance landscape character and townscapes.	++	<p>Likely Significant Effects</p> <p>The Sites forms part of the Drumlin Fields Landscape Character Area (Zone 13a). The Site does not include any features which contribute to this character area being previously development and wholly within the settlement of Earby. Site is situated within the Earby Conservation Area but has no direct link to any Listed Building. The Site is used as a garage lock up site and features single storey garages. In its current condition, the site detracts from the built quality of the wider area. The redevelopment of the Site has the potential to significantly enhance and contribute to the built character and quality of the area. A significant positive effect is assessed.</p> <p>Term</p> <p>Likely significant positive effects in the longer term.</p> <p>Mitigation</p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing, health and economic objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic and health benefits of new homes. The site occupies a previously developed site within the settlement boundary of Earby. The site is highly accessible to existing services and facilities and as a result score positively for transport and air quality objectives (neutral effect for air quality). The use of previously developed land benefits objectives of land resources and making efficient use of land and regeneration. The possible increase in quality to the built environment also benefits townscape and heritage objectives noting the site's location with the Earby Conservation and the site's currently dilapidated condition. The proximity of the site to New Cut and the potential for flooding form the only associated adverse effects of developing the site and design responses may be required. As a result and taking the above into account the proposal scores positively for climate change objectives.</p>

14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u> The Site forms part of the Drumlin Fields Landscape Character Area. The Site does not feature any of the characteristics of this character area occupying predominantly flat land adjacent to Earby Beck. The Site is in the open countryside and is largely undeveloped. The forms part of a farm but would not remove existing farm buildings. The Site does not form part of any noted landscape but would be visible from rising land to the south east. The Site is situated within the Earby Conservation Area but has no direct link to any Listed Building. The proposal is considered likely to result in less than substantial harm on the conservation area owing to the scale of the proposal in contrast to the existing built form in the locality. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u> Likely minor adverse effects kept to a minimum with mitigation measures.</p> <p><u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area. Consideration of public benefits.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Extent of harm on historic environment is not known.</p>
<p>Summary: The proposal has positive effects for housing, health and economic objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic and health benefits of new homes. The site has some accessibility to existing services and facilities with a neutral effect for transport and air quality objectives. The site is greenfield adjoining the settlement boundary of Earby this results in adverse effects for securing the efficient use of land and protecting natural resources. The site is located within the Earby Conservation Area. The form of development proposal is likely to harm this historic environment thereby resulting in adverse effects for townscape and heritage objectives. The proximity of the site to Earby Beck and the potential for flooding result in associated adverse effects of developing the site and design responses may be required. As a result and taking the above into account the proposal has a neutral impact for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P083 Land south of Grenfell Gardens, Colne				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 17 dwellings. The proposal help to improve the quality of existing housing stock and diversify housing land supply including affordable housing needs. Taking this into account, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<p><u>Likely Significant Effects</u></p> <p>The development site is not currently used for employment.</p> <p>The Site is located in within 2,000m of the nearest major employment site (Colne Town Centre).</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to have a minor positive effect for this objective.</p>
	+			<p><u>Term</u></p> <p>Likely permanent minor positive effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>People living on site work locally and/or spend their wages locally.</p> <p><u>Uncertainties</u></p> <p>Use of sustainable modes of transport to access employment. Medium risk.</p>

Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>	
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0		<p><u>Likely Significant Effects</u> The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p><u>Term</u> Neutral effect for the plan period</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>	
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	-	-	<p><u>Likely Significant Effects</u> The Site does not affect any designated site. The Site is covered by an Ecological Interest (LERN record). The Site is comprised of improved grassland with some semi improved grassland. The Site is located within the Green Infrastructure Network and is in use for recreation (Controlled usage). The development of the site would result in the loss of this facility. Overall the proposal is considered to have a minor adverse effect on this objective.</p> <p><u>Term</u> Likely permanent minor adverse effect reducing with mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. Mitigation measures unlikely to overcome effect on Green Infrastructure network.</p>

Appendix 5: Assessment of Potential Housing Sites

P083 Land south of Grenfell Gardens, Colne		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is not situated near to any listed buildings but it is likely that the building of the former Colne Grammar School is a non-designated asset noting its previous significance for the town and continuing value for residents. The development site is located separate to this building to the south and would be seen in the context of the relatively recent new build estate of Grenfell Gardens. Taking this into account it is unlikely that harm to this asset would arise through the development of the site. A neutral effect is found for this objective.</p> <p><u>Term</u></p> <p>Neutral effect likely to remain permanent following construction.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds including the Grammar School.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Degree of harm caused may increase depending on the quality of the development.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Foothills and Valleys Landscape Character Area (6a), The Site is contained on all sides by development/prominent features. The Site is flat in terms of its topography and does not contribute to the qualities of this LCA. The development of the Site would represent a minor extension of the built form. The existing site is largely in use for open space, with wider open space retained. The overall character of the area would therefore remain the same. The site would have limited visibility from nearby public views, vistas and routes, and is largely enclosed. A TPO exists within the western part of the Site reducing the developable area. A neutral effect is assessed for this objective with mitigation measures.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects with mitigation measures.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character, further boundary treatments where needed. TPO area to be retained with suitable offset from development.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P083 Land south of Grenfell Gardens, Colne		
SA Objective	Score	Commentary
<p>Summary: The proposal has positive effects for housing and economic objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic benefits connected to the delivery of new homes. The site is situated at an edge of settlement location and has limited accessibility given the distance from the site to the town centre. Some access is available however and the proposal does not relate to an isolated location. The site is greenfield adjoining the settlement boundary of Colne resulting in adverse effects for securing the efficient use of land and protecting natural resources. There are adverse effects for health associated with the development due to the loss of existing playing pitch provision (albeit in private ownership and use) and due to the site's proximity to the M65 motorway and noise and possibly air quality issues which arise from this proximity. It is possible that the latter issue can be addressed through the detailed design of the proposal however. The site also has an adverse effect for ecology due to the loss of existing habitats on site and the development of an area which forms part of the green infrastructure of Colne which is used for open space. The latter loss is a permanent consequence of the proposal and cannot be replaced unless provision can be provided in an accessible off-site location. For heritage objectives the proposal has a neutral effect. This recognises that the proposal is located out of the main vista of the Grammar School and located to the south and would be seen in the context of wider new build development. The quality of the design however will be important in ensuring that a neutral effect can continue to be observed through the development of the scheme. A neutral effect is also found for landscape/townscape objectives. Again this follows the assessment made for heritage objectives but also acknowledges the contained nature of the proposal and its location in close proximity to the M65 which cuts through the landscape reducing its quality. A neutral effect is found for climate change objectives, this reflects the relatively limited constraints to the development including flood risk, but is not positive due to the relatively long distance required to travel to most services therefore encouraging car travel.</p>

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. It is in commercial use featuring functional buildings. The Site is not considered to contribute positively to the character it its current form. Site is situated close to two conservation areas (Primet Bridge and Albert Road). There are no listed buildings near to the Site. The Site is developed and in use as a Garage. The redevelopment of the Site for a high quality development has the potential to enhance the built quality of the local area, potentially serving to link and enhance both Conservation Areas. A minor positive effect is assessed for this objective</p> <p><u>Term</u></p> <p>Likely minor positive effects potentially increasing to significant positive effects from the medium term with adoption of mitigation measures.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Viability to achieve a high quality development. High Risk.</p>
<p>Summary: The proposal has positive effects for housing and health objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated health benefits connected to the delivery of new homes. The proposal relates to a site which is developed and currently used for employment purposes close to the town centre of Colne. The current use of the site and loss of employment land resulting from the proposal results in a neutral effect noting the limited employment use connected to the site and the economic benefits generated. The redevelopment of land within Colne's settlement boundaries is beneficial for securing the efficient use of land, supports the regeneration of the town, and supports improvements to its built environment, enhancing the nearby conservation areas. A limited degree of flood risk affects the site which will need to be addressed through the redevelopment of the site. The site is highly accessible to services, shops and employment helping to encourage residents to use alternative modes of travel to the car. This benefits transport objectives but also supports the strong score attached to the site for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P087 Duckworth Mill, Skipton Road, Colne				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 14 dwellings. The proposal help to improve the quality of existing housing stock and diversify the type and size of homes in Colne. The area has limited viability meaning it is unlikely that the site will be able to support the delivery of affordable housing. Notwithstanding this, and noting the overall benefits housing land supply will have for the area, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability could affect the housing mix provided (Medium risk)</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	-	+	0	<p><u>Likely Significant Effects</u></p> <p>The development site is currently used for employment. Its redevelopment for housing could result in the loss of local jobs or local access to jobs if relocated elsewhere within the town or borough.</p> <p>The Site is located in within 2,000m of the nearest major employment site (Colne Town Centre).</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. Appendix 5: Assessment of Potential Housing Sites

P087 Duckworth Mill, Skipton Road, Colne				
SA Objective	Score		Commentary	
Summary: The proposal has positive effects for housing and health objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated health benefits connected to the delivery of new homes. The proposal relates to a site which is developed and currently used for employment purposes close to the town centre of Colne. The current use of the site and loss of employment land resulting from the proposal results in a neutral effect noting the limited employment use connected to the site and the economic benefits generated. The redevelopment of land within Colne’s settlement boundaries is beneficial for securing the efficient use of land, supports the regeneration of the town, and supports improvements to its built environment. The site is unaffected by flood risk or biological constraints. The site is close to the only AQMA designated within the borough. The site’s highly accessible location and limited scale ensures that the proposal will contributing to the worsening of air quality or highway problems located in the area however the effects of air pollution could affect the health of residents and the adoption of mitigation measures through the design, form and features of the development may be required. Overall the limited constraints and high connectivity of the site results in a strong positive score being attached to the site for climate change objectives.				

P088 Laithe Street, Colne				
SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		<u>Likely Significant Effects</u> The Site has capacity for 15 dwellings. The proposal help to improve the quality of existing housing stock and diversify the type and size of homes in Colne. The area has limited viability meaning it is unlikely that the site will be able to support the delivery of affordable housing. Notwithstanding this, and noting the overall benefits housing land supply will have for the area, it is concluded that the proposal will have a minor positive effect for this policy objective. <u>Term</u> Permanent minor positive effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> Low viability could affect the housing mix provided (Medium risk)	
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The development site is not in use for employment. The Site is located in within 2,000m of the nearest major employment site (Colne Town Centre). The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision. The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to have a minor positive effect for this objective. <u>Term</u> Likely permanent minor positive effects from the short to medium term.

SA Objective	Score	Commentary
		None <u>Uncertainties</u> Viability for a high quality development.
Summary: The proposal has positive effects for housing and health objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated health benefits connected to the delivery of new homes. The redevelopment of land within Colne’s settlement boundaries is beneficial for securing the efficient use of land, supports the regeneration of the town, and supports improvements to its built environment. There are minor positive effects for the economy due to the investment provided to the town by its development and future occupation. The site is greenfield and as such has a minor adverse effect for effective use of land objectives. The site is unaffected by flood risk, biological constraints, or the historic environment. The site does not contain features which are beneficial to the wider landscape character area. It is relatively small in scale and contained by neighbouring uses. A neutral effect is assessed for landscape objectives. Overall the limited constraints and high connectivity of the site results in a strong positive score being attached to the site for climate change objectives.

SA Objective	Score		Commentary
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	-	<p>Likely Significant Effects</p> <p>The Site does not affect any designated site.</p> <p>The Site is covered by an ecological interest (LERN record). The Site is predominantly improved grassland.</p> <p>The Site forms part of the Green Infrastructure network its development therefore has the potential to adversely affect this network.</p> <p>Overall the proposal is considered to have a minor adverse effect on this objective.</p> <p>Term</p> <p>Likely minor adverse effect reducing with the implementation of mitigation measures.</p> <p>Mitigation</p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p>Likely Significant Effects</p> <p>The Site is unlikely to be affected by heritage assets and as a result will have a neutral effect on the plan period.</p> <p>Term</p> <p>Likely permanent neutral effects</p> <p>Mitigation</p> <p>None.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.		-	<p>Likely Significant Effects</p> <p>The Site features with in the Rolling Upland Farmland Landscape Character Area (Zone 14b). Whilst the site relates quite closely to the existing settlement pattern, it is considered to contain features which contribute positively to this Character Area. This includes the drystone walls, open land, setting to the stream, and increasing topography which leads to open moorland to the north and north west. The development of this Site will adversely affect this Character Area in this locality. The Site is located on greenfield land to the north of Laneshaw Bridge with existing development on 2/3 sides. The land slopes upwards from the village and would protrude into the countryside in contrasted to a generally limited settlement pattern. The Site also forms the side of a small and narrow valley which follows the existing stream up to uplands located above and is significantly exposed to views from the north and east. The Pendle Way</p>

Appendix 5: Assessment of Potential Housing Sites

P091 Land off Emmott Lane, Laneshaw Bridge		
SA Objective	Score	Commentary
		<p>follows the course of the stream outwith but parallel to the site boundary. A large degree of change would occur to this route if the site were to be developed.</p> <p><u>Term</u> Adverse effects potentially reducing by a limited extent over time with mitigation measures.</p> <p><u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the local environment. Development should be focussed away from Keighley Road and the Brook below with efforts to blend this into the local landscape.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The proposal has positive effects for housing and health objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated health benefits connected to the delivery of new homes. The proposal includes land for education purposes. Some of the scores set out particularly for economic and regeneration needs are neutral because of this inclusion. If education facilities were not delivered than the scores would worsen to a negative effect for these objectives. The site relates to undeveloped land at the edge of Laneshaw Bridge. Laneshaw Bridge is a rural village of limited sustainability. As such the proposal is quite distant from most services other than the limited services which feature within the village. The proposal to develop greenfield land has adverse effects for securing the effective use of land and land resources. The site is also open and sites on rising land resulting in adverse effects for landscape objectives owing to the introduction of suburban form within an otherwise rural environment. The proposal also has a negative effect on biodiversity objectives owing the current species using the site and its role within the green infrastructure network. The site is closely related to an existing watercourse and whilst unlikely to result in adverse effects for water quality suffers from risk of flooding due to rivers/surface water. The need to address this may reduce the developable area of the site. The site has limited accessibility and is subject to a number of physical constraints. Overall the proposal is weak in terms of its sustainability merits resulting in a low neutral effect for climate change objectives.</p>

SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u> The Site has capacity for 9 dwellings. The proposal help to improve the quality of existing housing stock and diversity of housing stock increasing opportunities for home ownership. Taking the above into account, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u> Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u></p>

Appendix 5: Assessment of Potential Housing Sites

P093 Land off Hartleys Terrace, Colne				
SA Objective	Score			Commentary
				Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> High risk that proposal is not viable due to local weak market.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The development site is not currently used for employment. The Site is located within 2,000m of the nearest major employment site (Colne Town Centre) The proposal does not involve the loss or provision of education facilities and has a neutral effect for this objective. The proposal is of limited scale. Limited economic benefits would arise as a result of the proposal with the investment provided by the development, short term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, the proposal is considered to have a minor positive effect for this objective. <u>Term</u> A minor positive effect from the medium term. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> Use of sustainable modes of transport to access employment. Medium risk.
	+			
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	++	0	+	<u>Likely Significant Effects</u> The Site is located within 800m of a town centre (Colne) No service provision is proposed on site. The development would result in increased pressure on existing services and facilities however the proposal is limited in scale and so the degree of the effect caused is unlikely to cause harm to service quality or availability. The Site is within 800m of a primary school and 2000m of a secondary school. The site is accessible to a wide range of services and facilities. The proposal is considered to have a minor positive effect on this objective. <u>Term</u> Permanent minor positive effects with mitigation measures from the medium term. <u>Mitigation</u> None.
	+			

Appendix 5: Assessment of Potential Housing Sites

P093 Land off Hartleys Terrace, Colne				
SA Objective	Score			Commentary
				<u>Assumptions</u> None. <u>Uncertainties</u> None.
4. To improve the health and wellbeing of those living and working in the Pendle area.	++	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of a GP and open space. Little scope exists within the development to accommodate new open space within the site. No health facilities are proposed. The development is unlikely to increase pressure on existing facilities to a significant degree which would degrade the quality or availability of the service. The proposal would however remove access to open space for existing terraces on Hartley's Terrace harming the amenity of local residents.
	+			The Site is bordered by existing residential uses and open countryside. Commercial uses exist in the vicinity of the site but unlikely to adversely affect future occupiers. Taking the above into account, the proposal is assessed to have a minor positive effect on this objective. <u>Term</u> Permanent minor positive effects. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0	<u>Likely Significant Effects</u> The Site is located within 400m one or more assessed transport services. There are no known capacity issues on the local highway network. The development would not support investment in, or result in the loss of transport infrastructure and services. The proposal is accessible to some services and facilities helping reduce the need to travel by car and promote a modal shift. Accounting for the above, the proposal is assessed as having a minor positive effect for this objective.
	+			<u>Term</u> A positive effect from the medium term. <u>Mitigation</u> The small scale of the Site means that the level of contributions is unlikely to address issues of accessibility via public transport and walking and cycling if it is a requirement of the site.

		None.
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site has features which may contribute to this landscape character area such as small scale development with local topography changes. The site is however small in scale and its development would not harm the character area. The Site occupies a small parcel of greenfield land which is located within the settlement boundary, and closely and well related to the existing built form. The Site forms a logical location for development. A neutral effect is assessed.</p> <p><u>Term</u></p> <p>A permanent neutral effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. The site relates to undeveloped land within the settlement boundary of Colne. The limited scale of the site reduces the impacts of developing homes for most objectives to neutral. The site is well contained and does not experience any known overriding constraining features which would prevent its development. The small scale of the site also works to limit its benefits, with these limited. The site is located within Colne, a Key Service Centre, and as such is accessible to some services and facilities available within the town. This will help to encourage a modal shift. The relative accessibility of the site together with its limited constraints to development means that a minor positive effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P100 Land north of Red Lion Street Car Park, Earby		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Character Area (Zone 13a). The Site and its wider area does not contribute significantly towards this character area being located on generally gentling sloping land rising upwards to adjacent moorland. The Site is generally well related to the existing built form with a minor effect on landscape. The Site is in the open countryside and undeveloped. The Site does not form part of any noted landscape but would be visible PROW to north East. The Site is situated within the Earby Conservation Area but has no direct link to any Listed Building. The proposal is considered likely to have a minor adverse effect on the conservation area owing to the scale of the proposal in contrast to the existing built form in the locality with the proposal making an extension of the urban form which is not consistent with the existing pattern of development.</p> <p><u>Term</u></p> <p>Likely minor adverse effects kept to a minimum with mitigation measures.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area. Boundary treatment to the north, east and west. Harm likely to remain however.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Minor positive effects are assessed for health and economic objectives due to the connected benefits of delivering new housing in achieving improvements to health and the standard of living as provided by new quality housing and increased patronage and labour supply for the economy. The site has neutral effects for flooding and drainage and water quality objectives owing to the absence of major flood concerns affecting the site. The site is also relatively unconstrained for biodiversity. The site is undeveloped and as such score negatively for securing the efficient use of land. The site is part of the Earby Conservation Area. Whilst small in scale the proposal would not complement the existing settlement pattern of urban form and it is likely to cause harm to the historic environment. Further assessment is necessary and it is likely that a public interest test would be required.</p>

3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	+	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of one or more key service. No service provision is proposed on site. The development would result in increased pressure service quality/availability. The Site is within 2000m of a primary school. The proposal would support local businesses through increased patronage, helping to sustain the rural economy and will help diversify housing stock available in the rural area. Accounting for the above, on balance, the proposal is considered to have neutral effect on this objective.
	0			<u>Term</u> Permanent neutral effects. <u>Mitigation</u>

13. To conserve and enhance the historic environment, heritage assets and their setting.	--			<p>Likely Significant Effects The Site is situated within the Newchurch and Spen Brook Conservation Area and is likely to hold some links to a nearby listed buildings. The Site extends the built up area of Spen Brook extensively and uncharacteristically, ignoring the sensitivities of the historic environment which would be highly visible from numerous vantage points. Less than substantial to substantial harm is likely. A significant adverse effect is assessed for this objective.</p> <p>Term Permanent significant adverse effects with the potential to reduce with the adoption of mitigation measures.</p> <p>Mitigation Smaller scale development, use of traditional vernacular and natural materials. High quality design and landscaping.</p> <p>Assumptions None</p> <p>Uncertainties</p>

Appendix 5: Assessment of Potential Housing Sites

P103 Land to rear of Osbourne Terrace, Spen Brook		
SA Objective	Score	Commentary
		The degree that potential mitigation measures could reduce the level of harm caused for this objective, and public interest case that can be demonstrated in determining the suitability of the proposal (High Risk).
14. To conserve and enhance landscape character and townscapes.	--	<p>Likely Significant Effects</p> <p>The Site is located within the Moorland Fringe Character Area (Zone 4g). The Site sits within a broadly flat part of the landscape within a rural valley. Despite this, the Site comprises of some of the key features which contribute positively to this character area including open farmland framed by dry-stone walls stretching out to impressive views to the south. The Site also contributes significantly to the setting of Spen Brook, providing the context of a rural set village with existing vegetation working to screen out modern development. Existing works to the former mill site are temporary in nature. The Site is located within the AONB. National Planning Policy establishes significant restraint of development and protection within the AONB. There is no public interest case to develop the Site for housing for the proposed scale. Significant adverse are assessed.</p> <p>Term Permanent significant adverse effects which cannot be mitigated</p> <p>Mitigation None.</p> <p>Assumptions None</p> <p>Uncertainties None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are assessed for health, wellbeing, and regeneration objectives noting the relatively limited scale of the proposal and its isolated location. The isolation of the site and limited service infrastructure available results in adverse effects for highway objectives. The site is greenfield and as such the proposal has a negative effect for securing the efficient use of land and resources. Despite this, evidence gathered thus far shows that the site is relatively unconstrained by flood risk and biodiversity, resulting in neutral effects for these objectives. The site is located within the Newchurch-in-Pendle and Spen Brook Conservation Area. It is also located in the Forest of Bowland Area of Outstanding Natural Beauty. In contrast to existing built form the proposal is in stark contrast in terms of its scale. The site also located in open area of land which is not well contained and visible from a wider range of viewpoints. As such and taking this into account the proposal would have an adverse effect on heritage and landscape objectives.</p>

			<p>Likely Significant Effects The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is primarily improved and semi improved grassland. There is some semi-natural broadleaved woodland to the east of the Site a priority habitat. The Site is not located within the Green Infrastructure Network. Overall the proposal is considered to have a minor adverse effect on this objective.</p> <p>Term Likely minor adverse effects reducing in the longer term with the adoption of mitigation measures.</p> <p>Mitigation Retain and enhance existing habitats. Create new habitats within open space, landscape and design details of the development.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>

Appendix 5: Assessment of Potential Housing Sites

P104 Land at Oaklands, Church Street, Barrowford		
SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is partly situated within Barrowford Conservation Area. The development of a new access and new homes off Church Street would alter the built environment in this area. The site is located in close proximity to a number of buildings which contribute significantly towards the conservation area. These buildings are not listed but may form non-designated heritage assets. The existing tree frontage and retaining stone wall along the road frontage of Church Street is noted within the Barrowford Conservation Area Appraisal to contribute positively to a key view along Church Street which forms the arrival into the historic part of the settlement and provides a semi-rural character which is notably different to that displayed in the village centre. A listed building is located to the north west of the Site which exists on elevated land above the site. There may be some degree of interrelationship between the Site and this listed building. A finding of less than substantial harm is assessed for this effect caused by the proposal on the historic environment. This is consistent with conclusions made by the Council during the recent planning application. Based on the above it is considered that the proposal has a minor adverse effect on this objective.</p> <p><u>Term</u></p> <p>Significant adverse effects likely to reduce with mitigation measures.</p> <p><u>Mitigation</u></p> <p>Further study necessary at planning application stage. High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area. Boundary treatment to west and south. Consideration of public benefits in accordance with the NPPF.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Foothills and Valleys Character Area (Zone 6a). There are several features within the site which contribute to this landscape character area, including the existing tree frontage and retaining stone wall along the road frontage of Church Street. This view is noted within the Barrowford Conservation Area Appraisal to contribute positively to a key view along Church Street which forms the arrival into the historic part of the settlement and provides a semi-rural character which is notably different to that displayed in the village centre. The site is contained by development to the north, east, south, and partially to the west with limited views or connection to open countryside to the north east. The Site is therefore well related and the impacts of developing the site would be limited to a relatively small area. The stone wall and TPO trees contribute to the character of the site and the immediate surrounding area, which reduces development potential. Minor adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>minor adverse effect potentially reducing over time.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area. Boundary treatment to west and south.</p>

Appendix 5: Assessment of Potential Housing Sites

P104 Land at Oaklands, Church Street, Barrowford		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. The new homes provided at the site also benefit health, wellbeing, economic and regeneration objectives noting the increased opportunity to access quality housing and the benefits an increased population will have for employers and businesses. The site is undeveloped, as such the proposal has a negative effect for securing the efficient use of land. The site benefits from some access to existing services and facilities available within Barrowford however highway capacity constraints experienced locally are only likely to be exacerbated by the development and highway safety problems exist on routes between the site and the village centre. The site experiences drainage problems resulting in water topping the wall and entering the highway. It is thought that this is caused by a blocked drain rather than a result of surface water drainage problems. A minor adverse effect is assessed for this objective. The proposal borders the Barrowford Conservation Area and its development would alter the existing urban environment. The urban environment in its current condition contributes towards the conservation area. As a result less than substantial harm is observed and a minor adverse effect its assessed for this objective. The proposal exhibits some of the features noted within the Lancashire landscape appraisal and contributes towards the quality of this area. The connection held to the historic environment is also a defining feature of the site. The development of the site will adversely affect landscape/townscape objectives resulting in a minor adverse effect for this objective. Overall the site is relatively accessible being attached to a Local Service Centre within the M65 Corridor. The site experiences a number of constraints and sensitivities resulting in adverse effects. Taking this into account the site is assessed to have a neutral effect on climate change objectives.</p>

		<p>Significant and permanent adverse effects.</p> <p><u>Mitigation</u></p> <p>No suitable mitigation.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has significant positive effects for housing objectives due to the scale of housing provision proposed improving the quality and diversity of housing stock locally. The new homes provided at the site also benefit health, wellbeing, economic and regeneration objectives noting the increased opportunity to access quality housing and the benefits an increased population will have for employers and businesses. The site is undeveloped, as such the proposal has a negative effect for securing the efficient use of land. The site benefits from some access to existing services and facilities available within Earby helping to reduce reliance on travel by car. The site is located in close proximity to new cut and is at risk from flooding. Detailed understanding and flood risk and satisfactory mitigation measures will need to be adopted as part of any scheme to develop the site. The site is located close to a designated wildlife site and is known to be used by protected species. The site occupies an important undeveloped gap between Earby and Sough serving to maintain their physical separation and identity. The development of this site would remove or close this gap threatening the character of these separate places. A neutral effect is assessed for climate change noting its relatively strong accessibility and number of physical constraints affecting the site reducing its suitability for housing.</p>

SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Character Area (Zone 6a). Some of the features on site contribute to this landscape character area such as presence of agricultural buildings and the rural offset provided by the Site to Fence from the bypass, the overall role fulfilled by the Site is however reduced by its proximity to the bypass which significantly reduces the scale of the site and its setting for Fence. The Site is moderately scaled and contained on each sites by development or infrastructure. Its wider landscape effects are likely to be limited, and in the long run would reduce to zero. The Site is however designated Green Belt and its loss to development would harm the purposes of the Green Belt in this location. Significant adverse effect is found for this objective.</p> <p><u>Term</u></p> <p>Significant and permanent adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to improvements made regarding the quality and diversity of housing stock locally. The proposal has little benefit for health, wellbeing, economic and regeneration objectives due to the limited accessibility of the site to nearby services, shops and sources of employment notwithstanding the benefits provided by the development of new homes. The site is undeveloped, as such the proposal has a negative effect for securing the efficient use of land. The site experiences a high risk of surface water flooding. This constraint may render the proposal undevelopable and requires further study to assess the extent and significance of this issue in close cooperation with the LLFA. Mitigation measures may significantly increase development costs and reduce site capacity. The site is located close to a designated wildlife site with potential for adverse effects. The site is located within the Green Belt and as such has a significant adverse effect for landscape objectives. A minor adverse effect is assessed for climate change noting its relatively limited accessibility of the site promoting travel by car and the degree of flood risk affecting the site.</p>

SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site fulfils a minor role within the character area will valuable on site features such as field boundaries and sloping topography to the river valley to the south. Intervening vegetation however limits the interaction to this river valley to the south. The Site occupies an open countryside location and is currently undeveloped. The development of the Site would extend the built up area of Blacko to the south of Gisburn Road however this wouldn't be uncharacteristic of the settlement pattern with some development already located to the south of this road. Blacko sits on side of a hill, sloping steeply to the valley below. The Site is close to the AONB boundary and would be visible from the AONB and public routes within. The development is limited is scale and would be seen in the context of the existing settlement. Taking this into account, and the findings of the previous Appeal relating to the site, overall a minor adverse effect has been assessed.</p> <p><u>Term</u></p> <p>Likely permanent minor adverse effects.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatment to west and south.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has relatively effect on sustainability objectives due to the limited scale of the proposal. There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal has little benefit for health, wellbeing, economic and regeneration objectives due to the limited scaled of the proposal and its relatively poor accessibility of the site to nearby services, shops and sources of employment notwithstanding the benefits provided by the development of new homes. This results in minor adverse effects for highway objectives promoting travel by car. The site is undeveloped, as such the proposal has a negative effect for securing the efficient use of land. A neutral effect is assessed for heritage objectives due to the limited relationship of the site with the nearby listed Blacko Tower. A minor adverse effect is assessed for landscape objectives noting the landscape sensitivity of the proposal site, its openness and proximity to the AONB. This finding takes into account the findings of the previous appeal relating to a previous proposal for the site. Taking into account the above, it is concluded that the site has a neutral effect on climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	0	<p><u>Likely Significant Effects</u> The SFRA confirms that the site is located in Flood Zone 1 and is subject to a low risk of flood. As such the site has a neutral effect on this objective.</p> <p><u>Term</u> Likely neutral effects with the adoption of mitigation measures.</p> <p><u>Mitigation</u> Adoption of the SuDs hierarchy to manage surface water drainage from the site.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Site specific detail to be assessed at the planning application stage.</p>
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The Site is not of a sufficient scale to contribute significantly towards air quality problems locally. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0	<p><u>Likely Significant Effects</u> The site has a suitability score of 3.74. The site therefore has a neutral effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u></p>

Appendix 5: Assessment of Potential Housing Sites

P111 Sports Field Adjacent to Former Nelson and Colne College, Colne				
SA Objective	Score			Commentary
				<p>Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0			<p><u>Likely Significant Effects</u> The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p><u>Term</u> Neutral effect for the plan period</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	-	-	<p><u>Likely Significant Effects</u> The Site does not affect any designated site. The Site is covered by an Ecological Interest (LERN record). The Site is comprised of improved grassland with some semi improved grassland. The Site is located within the Green Infrastructure Network and is in use for recreation (Controlled usage). The development of the site would result in the loss of this facility. Overall the proposal is considered to have a minor adverse effect on this objective.</p> <p><u>Term</u> Likely permanent minor adverse effect reducing with mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. Mitigation measures unlikely to overcome effect on Green Infrastructure network.</p> <p><u>Assumptions</u></p>

Appendix 5: Assessment of Potential Housing Sites

P111 Sports Field Adjacent to Former Nelson and Colne College, Colne		
SA Objective	Score	Commentary
		<p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	?	<p><u>Likely Significant Effects</u></p> <p>The Site is not affected by designated heritage assets. Colne Grammar School may be a non-designated heritage asset. Developing the playing field in front of this building could adversely affected its setting. A balanced judgement will need to be made taking this relationship into account and depending on the scale and form of the development. An uncertain effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Uncertain effects likely to be clarified by any detailed scheme to bring the site forward for development.</p> <p><u>Mitigation</u></p> <p>Layout, detailed design, materials, form, scale.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Mitigation measures may result in a smaller development (Low-medium risk).</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Foothills and Valleys Landscape Character Area (6a), but is used for private sports provision. The Site is therefore open contained on all sides by development/prominent features. The Site is flat in its topography and does not contribute to the qualities of this LCA. The Site would result in the loss of a break in the built up area on the edge of Colne with a loss of open space and adversely affecting the setting and character of the existing settlement. The harm is limited by the absence of designation.</p> <p><u>Term</u></p> <p>Minor adverse effects for the plan period likely to remain permanent.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P111 Sports Field Adjacent to Former Nelson and Colne College, Colne				
SA Objective	Score			Commentary
Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health and economic objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy. There are little benefits associated with the proposal for transport and regeneration objectives due to the relatively poor accessibility of the site to nearby services, shops and sources of employment, promoting travel by car. The site is open space and wider constraints are limited. The Site is located within the setting of Colne Grammar School a likely non-designated heritage asset. A balanced judgement will need to be made depending on the detail of the proposal to develop the site and harm caused to this building. The development of the site would close an existing area of open space located on the edge of Colne and further extend the urban area closing the gap (marginally) between Colne and Barrowford (the site is not Green Belt). A minor adverse effect is assessed for landscape. Accounting for the above, and noting the relatively limited constraints to developing the site, the proposal has a neutral effect for climate change objectives.				

P112 Land adjacent to 12 Wheatley Lane Road, Barrowford				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			Likely Significant Effects The Site has capacity for 10 dwellings. The proposal help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective. Term Permanent minor effects from the medium term Mitigation Planning obligations for the mix of housing Assumptions None. Uncertainties None.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	0	0	Likely Significant Effects The development site is not currently used for employment. The Site is not located within 2,000m of the nearest major employment site. The proposal does not involve the loss or provision of education facilities. Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a neutral effect for this objective. Term A permanent neutral effect.

SA Objective	Score	Commentary
		<p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy, however these benefits can only be provided if existing open space found on the site is kept free from development. Benefits are associated with the proposal for transport and regeneration objectives due to the relative accessibility of the site to some services helping to reduce travel by car and the limited scale of the proposal. A neutral effect is assessed for economic objectives noting the site's distance to employment land sites. The site has not been previously developed and so adverse effects are assessed for securing the effective use of land. The site is heavily affected by flood risk and the SFRA concludes that the site is not suitable for housing. A significant adverse effect is assessed for flooding objectives. Neutral effects are assessed for ecological and historic environment objectives. Further studies in relation to these matters may however be necessary. Minor adverse effects are recorded for landscape objectives noting the site's green belt designation and function. Overall an adverse effect is assessed for the development in relation to climate change objectives. This is largely due to the significant degree and risk of flood risk which affects the site.</p>

The public benefits associated within the proposal does not outweigh the harm identified to the historic environment (medium-high risk).</p>
14. To conserve and enhance landscape character and townscapes.	--		<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Rolling Upland Farmland Landscape Character Area (Zone 14b). The Site covers extensive open land to the north of the village and school, with land characteristic of rolling upland farmland which is generally open and of elevated</p>

Appendix 5: Assessment of Potential Housing Sites

P114 Land north of Sheridan Road, Laneshaw Bridge		
SA Objective	Score	Commentary
		<p>topography. The Site is located on greenfield land to the north of Laneshaw Bridge. The land slopes upwards from the village and would result in a significant protrusion into the countryside in contrasted to a generally limited and ribbon type wider settlement pattern which would be highly visible from surrounding areas. The Site is also located close to a listed building and likely to result in harm to this asset. Overall a significant adverse effect is found for this objective reducing with mitigation.</p> <p><u>Term</u> Significant adverse effects with potential to reduce with mitigation measures to be agreed with the Council.</p> <p><u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the local environment. Development should be directed away from the heritage asset close to the existing settlement. High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatment to north and east.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health objectives owing to the associated benefits brought to health by access to quality housing. There are little benefits associated with the proposal for regeneration objectives due to the relatively poor accessibility of the site to nearby services, shops and sources of employment, the site is however accessible to public transport services supporting minor positive effects for transport objectives. The site is undeveloped and as such has adverse effects for the making efficient use of land. The Site is closely related to a listed building and as a result is likely to result in less than substantial to substantial harm to this asset requiring an assessment of public benefits. Significant adverse effects are assessed for heritage objectives. Similarly significant adverse effects are assessed for landscape objectives noting the site's relatively poor relationship to the settlement pattern and its scale which is inconsistent with the role and sustainability of Laneshaw Bridge. The site is sloping and highly visible to wider open land to the south. The site does not form a natural extension to Laneshaw Bridge. The site has neutral effects for most other objectives including climate change noting the limited additional constraints to developing the site for housing.</p>		

P115 Land off Carr Hall Road, Barrowford		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u> The Site has capacity for 68 dwellings including affordable housing. The proposal help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u> Permanent minor effects from the medium term</p> <p><u>Mitigation</u> Planning obligations for the mix of housing</p>

				<u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site made up on predominantly improved grassland. The Site is not located within the Green Infrastructure Network. Overall the proposal is considered to have a likely neutral effect on this objective. <u>Term</u> Likely neutral effect over the long term with the successful adoption and implementation of mitigation measures. <u>Mitigation</u> Existing habitats to be retained and enhanced as far as possible. New habitats created within areas of open space, landscaping and where appropriate on new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	0			
13. To conserve and enhance the historic environment, heritage assets and their setting.	--			<u>Likely Significant Effects</u> The Site is located within the Carr Hall Road Conservation Area. The Carr Hall Road Conservation Area appraisal notes the significant role played by the site in enabling views into and from the site which contribute to the conservation area’s setting. Taking this into account it is considered likely that the proposal would result in substantial harm to this designation. A public interest test would be required to determine the suitability of the proposal. Significant adverse effects are assessed for this objective. <u>Term</u> Permanent Significant Adverse effects. <u>Mitigation</u> It is unlikely that the harm could be reduced and public benefits outweigh the harm caused by the proposal. <u>Assumptions</u> None <u>Uncertainties</u> None.
14. To conserve and enhance landscape character and townscapes.	--			<u>Likely Significant Effects</u> The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site displays some of the features identified as important within this LCA. This includes gentle landform, fields framed by trees and generally narrower streets.

Appendix 5: Assessment of Potential Housing Sites

P115 Land off Carr Hall Road, Barrowford		
SA Objective	Score	Commentary
		<p>The Site is located on the edge of the settlement and is closely related to Lomeshaye Industrial Estate reducing the role played by the Site. The Site is designated Green Belt, and it has been recently concluded by the Green Belt review to fulfil the purposes of the Green Belt. There are no very special circumstances to justify the release of land from the Green Belt for development. Development of the scale of the proposal amounts to inappropriate development and will cause significant harm to the designation in this area. The Site is located within a Conservation Area and the site is likely to cause harm to this designation. The Site also features several TPOs which will need to be retained and offset reducing the developable area. A significant adverse effect is assessed.</p> <p>Term A significant adverse effect</p> <p>Mitigation No mitigation measures exist.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health objectives owing to the associated benefits brought to health by access to quality housing and economic benefits due to the benefits provided to the economy provided by the delivery of new housing. There are little benefits associated with the proposal for regeneration and transport objectives due to the relatively poor accessibility of the site to nearby services, shops and sources of employment, increasing the reliance of future occupiers on travel by car. The site is undeveloped and as such has adverse effects for the making efficient use of land. The Site is located within a conservation area and found to maintain an important role for this conservation area. Substantial harm is assessed for this proposal requiring assessment of public benefits. Similarly significant adverse effects are assessed for landscape objectives noting the site's relatively poor relationship to the settlement pattern and affect on built character, and the site's designation as Green Belt. The site has neutral effects for most other objectives including climate change noting the limited additional constraints to developing the site for housing.</p>

				To be determined in consultation with Lancashire County Council. <u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	-	<u>Likely Significant Effects</u> The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site consists primarily of improved grassland. The Site is located within the Green Infrastructure network and the development of the Site for housing would have an adverse effect. Overall the proposal is considered to have a likely minor adverse effect on this objective. <u>Term</u> Minor adverse effect reducing with implementation of mitigation measures.
				<u>Mitigation</u> Retention and enhancement of existing habitat. Creation of new habitat within open space, landscaping and new buildings where appropriate. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.				<u>Likely Significant Effects</u> The Site is not located within a conservation area but is located near to a listed building. The development of the Site could result in adverse effects on this asset given its proximity to this asset, rural nature and quality of the asset and the site in its current condition and significant extent of the proposal in contrast to the surrounding area. Less than substantial harm may arise from the proposal resulting in the need to engage the public benefits test. A minor adverse effect is assessed for this objective.
				<u>Term</u> Minor adverse effects from the medium term with potential for this to reduce with the implementation of mitigation measures. <u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatments to limit visibility of the development from the wider area and its impact on the open countryside. <u>Assumptions</u> None <u>Uncertainties</u> The proposal may not have sufficient public benefits to outweigh the harm caused to the historic environment (medium-high risk)

Appendix 5: Assessment of Potential Housing Sites

P116 Land at Church Clough Farm, Lenches Road, Colne		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). Some features on site display the character which contribute to towards this LCA, such as regular field pattern, sloping land, hedgerow and trees which is more generally sloping and less well related to the urban area. The loss of the Site to development will lead to some harm to the LCA. The Site is located on greenfield land to the south and detached from the settlement boundary of Colne. Whilst the Site is not located in an area which is designated for its landscape quality, the proposal would result in a significant development which is isolated in the open countryside and as such is likely to have a significant adverse effect on landscape and townscape.</p> <p><u>Term</u></p> <p>Significant adverse effects reducing somewhat with mitigation.</p> <p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatments to limit visibility of the development from the wider area and its impact on the open countryside.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health objectives owing to the associated benefits brought to health by access to quality housing and economic objectives due to the benefits provided to the economy provided by the delivery of new housing. The development of the site could assist regeneration locally with the investment made to the area and increased usage and patronage of local services, facilities and businesses. The proposal is support of transport objectives due to the relative accessibility of the site to nearby services, shops and sources of employment, reducing the reliance of future occupiers on travel by car. That said steep topographical changes experienced in the local area are likely to counter this. The site is undeveloped and as such has adverse effects for the making efficient use of land. The Site is located within close proximity to a listed building and is likely to result in at least less than substantial harm to this asset requiring consideration of public benefits. The site sits detached from the built up area of Colne on quite severely sloping ground which is highly visible from the town centre and which forms part of the unique setting of Colne. Substantial harm is assessed for landscape impact as a result. The site has neutral effects for most other objectives including climate change noting the limited additional constraints to developing the site for housing.</p>		

P117 Land at Chapel Farm, Barrowford Road, Fence		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 46 dwellings including affordable housing. The proposal will help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p>

Appendix 5: Assessment of Potential Housing Sites

P117 Land at Chapel Farm, Barrowford Road, Fence				
SA Objective	Score			Commentary
				Permanent minor effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> None.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The development site is not used for employment. The Site is located within 2,000m of the nearest major employment site (Riverside Business Park). The proposal does not involve the loss or provision of education facilities. Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a minor positive effect for this objective. <u>Term</u> A permanent minor positive effect. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> Use of sustainable modes of transport to access employment. Medium risk.
	+			
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	+	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of one or more key service. No service provision is proposed on site. The development would result in increased pressure service quality/availability. The Site is within 2000m of a primary school. The proposal would support local businesses through increased patronage and help diversify housing stock available. Accounting for the above, on balance, the proposal is considered to have a neutral effect on this objective. <u>Term</u> Permanent neutral effect. <u>Mitigation</u> Possible requirement for developer contributions to address any shortfall in service provision created by the development.
	0			

Appendix 5: Assessment of Potential Housing Sites

P117 Land at Chapel Farm, Barrowford Road, Fence				
SA Objective	Score			Commentary
				<u>Assumptions</u> None. <u>Uncertainties</u> None.
4. To improve the health and wellbeing of those living and working in the Pendle area.	+	0	-	<u>Likely Significant Effects</u> The Site is located within 800m of a GP or open space. Scope exists within the development to accommodate new open space within wider land owned by the promotor. No health facilities are proposed. The development is likely to increase pressure on existing facilities. The Site is bordered by existing residential uses, and open countryside. The A6068 Fence By-pass may have some adverse effects in terms of noise and air pollution on part of the Site. Accounting for the above, and noting the benefits brought by housing supply to public health, on balance, the proposal is considered to have a neutral effect on this objective. <u>Term</u> Likely permanent neutral effects with implementation of mitigation measures. <u>Mitigation</u> Development to be located away from the by-pass with suitable boundary treatment and mitigation measures for road noise. Open Space to be provided on site. Further contributions towards open space provision may be required. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	0			
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	-	0	<u>Likely Significant Effects</u> The site is located within 400m of one or more transport services. There are existing capacity issues on the local highway network due to on street parking. Whilst limited in scale the development is likely to contribute to these especially in peak hours. The development would not support investment in, or result in the loss of transport infrastructure and services. Accounting for the above, the proposal is assessed as having a neutral effect for this objective. <u>Term</u> A neutral effect from the medium term. <u>Mitigation</u> Travel plan measures aimed at reducing car usage and promoting access by foot, bicycle and public transport. <u>Assumptions</u>

Appendix 5: Assessment of Potential Housing Sites

P121 Land east of Rye Croft, Trawden		
SA Objective	Score	Commentary
		Site specific detail to be assessed at the planning application stage. Effects of climate change on flood risk. Addressing flood risk issues may increase development costs and/or reduce site capacity threatening viability (low-medium risk)
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The site is unlikely to contribute towards air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0	<p><u>Likely Significant Effects</u> The site has a suitability score of 3.61. The site therefore has a neutral effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u></p>

Appendix 5: Assessment of Potential Housing Sites

P121 Land east of Rye Croft, Trawden				
SA Objective	Score			Commentary
				Site does not provide a commercially attractive or viable site for extraction. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved semi natural improved grassland The Site is not located within the Green Infrastructure network. Overall the proposal is considered to have a neutral effect on this objective.
	0			<u>Term</u> Neutral effect likely to remain permanent with mitigation. <u>Mitigation</u> Retain and enhance existing habitats. Creation of new habits as appropriate within open space, landscaping and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<u>Likely Significant Effects</u> The Site is located within the Trawden Forest Conservation Area. The site is not especially prominent nor affects buildings or structures of the conservation area which are notably significant and contribute towards the unique and special character of the conservation area. The proposal is likely to result in less than substantial harm to the historic environment. A minor adverse effect is assessed for this objective. <u>Term</u> Adverse effects for the plan period. <u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatments to limit visibility of the development from the wider area and its impact on the open countryside. <u>Assumptions</u> None <u>Uncertainties</u> It is unclear whether the public benefits of the proposal would outweigh the harm caused by the proposal on the historic environment (medium – high risk)

Appendix 5: Assessment of Potential Housing Sites

P121 Land east of Rye Croft, Trawden		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site sits within the moorland fringe, South Pennine Fringe character area. The site is of limited scale, and makes a limited contribution to the character area. The site relates to the built up area of Trawden (Hollin Hall) to the west only. The site sits on steeply rising land as the land rising to open moorland. The site is visible from some public routes however this is limited but changes in topography and thick vegetation. Overall a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Effects of proposal likely to be most significant in the shorter term during the construction with the effects reducing to a minor adverse effect in the longer term.</p> <p><u>Mitigation</u></p> <p>Sensitive design responses to local landform and architecture. Siting, scale, appearance of development and role of landscaping.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site's limited scale and relative inaccessibility to services, sources of employment and shops mean that neutral or minor adverse effects are assessed for regeneration, economic and health objectives notwithstanding the positive contribution new housing makes towards fulfilling these objectives. Adverse effects are assessed for transport objectives due to the distance of the site from a regular bus service and existing capacity problems experienced within the local highway network due to on-street parking. The site is undeveloped and as such has adverse effects for the making efficient use of land and use of natural resources. The site has a relatively high risk of flooding from groundwater. Further assessment is needed to evidence the effect this might have on site suitability/deliverability. A minor adverse effect is assessed for flooding objectives. The Site is located within a conservation area and is likely to result in at least less than substantial harm to this asset requiring consideration of public benefits with adverse effects assessed for heritage objectives. The site is not known to be of ecological value with further assessment requirement. The site is an edge of settlement location relating to steeply rising land. The site is visible from wider areas however this is contained by changes in topography and the site's location in a thickly vegetated area. A minor adverse effect is assessed for landscape objectives. Overall a neutral effect is assessed for climate change objectives.</p>		

P122 Land at Holme End, Greenhead Lane, Brierfield		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 27 dwellings. The proposal will help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. The site is located in a weak market area and as such viability low. As a result the proposal is unlikely to support the delivery of affordable housing. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p>

SA Objective	Score			Commentary
the sustainable use of natural resources.				Permanent loss where developed. Mitigation To be determined in consultation with Lancashire County Council. Assumptions Site does not provide a commercially attractive or viable site for extraction. Uncertainties None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	Likely Significant Effects The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site features predominantly improved grassland. The Site is located adjacent to the Green Infrastructure Network. Its development is unlikely to adversely affect this network. Overall the proposal is considered to have a likely neutral effect on this objective. Term Likely neutral effects over the longer term with implementation of mitigation measures.
	0			Mitigation Retain and enhance existing habitats. Creation of new habitats in open space, landscaping and where appropriate, new buildings. Assumptions None. Uncertainties None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			Likely Significant Effects The Site is located adjacent to a listed structure (Pendle Bridge), and in good view of this. The listed structure is currently in a rural location which would alter with the development of this site. The proposal is likely to result in at least less than substantial harm requiring assessment of public benefits. Minor adverse effects are assessed for this objective. Term Likely adverse effects with mitigation measure. Mitigation High quality housing with scale, form, materials and appearance taken from listed building. Development set back the listed structure. Careful boundary treatments Assumptions None Uncertainties

Appendix 5: Assessment of Potential Housing Sites

P122 Land at Holme End, Greenhead Lane, Brierfield		
SA Objective	Score	Commentary
		It is unclear whether the public benefits of the proposal would outweigh the harm caused by the proposal on the historic environment (medium – high risk)
14. To conserve and enhance landscape character and townscapes.	--	<p>Likely Significant Effects</p> <p>The Site is located within the industrial foothills and valleys Landscape Character Area (Zone 6a). The Site displays some of the key qualities of this LCA at a local level. The Site provides a rural context to Pendle Water which flows to the east and positively contributes to the rural fringe of the urban area. Agricultural buildings and rural dwellings are located to the north. The field itself is gently sloping and is bordered by hedgerows. The M65 is nearby but not visible from the Site. Some local harm may arise to the LCA if the Site was developed. This is increased given the rural context of the Site (The site being isolated from the urban area). The Site is designated Green Belt, and it has been recently concluded by the Green Belt review to fulfil the purposes of the Green Belt. The development of the Site would result in urban sprawl of the existing built up area. There are no very special circumstances to justify the release of land from the Green Belt for development. The Site is isolated for existing built form and would represent a significant incursion into the open countryside which does not sit well within the local landscape and fails to reflect the local pattern of development. A significant adverse effect is assessed for this objective.</p> <p>Term A significant adverse effect</p> <p>Mitigation No mitigation measures exist.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is distant from services, facilities and public transport services promoting travel by car. As a result the proposal has adverse effects for regeneration and transport objectives. Adverse effects are assessed for health objectives partly due to distance to existing facilities but also due to the proximity of the site to the M65 and likely effects of this on future residents. The site is undeveloped and as such has adverse effects for the making efficient use of land and making efficient use of resources. The Site is subject to a number of physical constraints. The site is located close to a listed structure and its development for housing is likely to result in at least less than substantial harm to this asset requiring consideration of public benefits. The site has some ecological value resulting in potential adverse effects. The site is close to a watercourse and experiences flooding. The site is designated as green belt. Its development would urbanise edge of Burnley, the open countryside, and villages of Fence and Higham located to the north resulting in significant adverse effects for landscape objectives. These factors combine to justify a minor adverse effect assessed for climate change objectives.</p>

SA Objective	Score	Commentary
heritage assets and their setting.		<p>causing likely significant and demonstrable harm which is unlikely to be reduce. An assessment of less than substantial to substantial harm is likely resulting in the need to consider the proposals public benefits. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u> Permanent significant adverse effects.</p> <p><u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatments to limit visibility of the development from the wider area and its impact on the open countryside. Mitigation unlikely to be enough to reduce likely harm caused.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> It is unclear whether the public benefits of the proposal would outweigh the harm caused by the proposal on the historic environment (medium – high risk)</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u> The Site is located within the industrial foothills and valleys Landscape Character Area (Zone 6a). The Site contributes to this LCA providing a large area of working agricultural land on gentle slope to the north of Higherford. The Site is open in character with some dry stone walls and some hedgerows. Public routes cross the site providing a link for residents into the open countryside. The development of this site would represent a significant loss to the LCA in this area. The Site would represent a significant incursion into the open countryside which is both isolated from and fails to reflect the settlement pattern of Higherford. The proposal is likely to result in significant harm to nearby listed buildings which is unlikely to be mitigated. Several PROW cross the site which is current rural and in agricultural use. The development of the Site would significantly alter the character of the area and cause harm to the quality and tranquillity of the PROW and views provided from their routes. A group TPO occupies the likely access to the site and represents a further constraint to the development of the Site. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u> A significant adverse effect</p> <p><u>Mitigation</u> No mitigation measures exist.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P123 Land North of East Stone Edge, Barnoldswick Road, Barrowford				
SA Objective	Score		Commentary	
Summary: There are positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is distant from most services, facilities and public transport services promoting travel by car. As a result, this neutralises the proposals benefits on the economy, health and regeneration objectives. Adverse effects are assessed for transport objectives. The site is undeveloped and as such has adverse effects for the making efficient use of land and making efficient use of resources. The Site is subject to a number of physical constraints. The site is located close to a listed structures and its development for housing is likely to result in at least less than substantial harm to substantial harm to this asset requiring consideration of public benefits. The site relates to an extensive open area north of Higherford and is highly visible from wider viewpoints and vistas. The proposal is of significant scale. Its development would dramatically alter the landscape, degrading its quality, and adversely affecting the role of this landscape as a transition towards upland moorland to the north. These factors combine to justify a minor adverse effect assessed for climate change objectives.				

P125 Land adjacent to 373 King’s Causeway, Brierfield				
SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		<u>Likely Significant Effects</u> The Site has capacity for 20 dwellings. The proposal help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. The proposal is within a weaker housing market area. As a result the potential to secure affordable housing at the site is reduced. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective. <u>Term</u> Minor positive effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> Limited viability may affect the mix of housing provided on site (low-medium risk)	
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The development site is not currently used for employment. The Site is located within 2,000m of the nearest major employment site (Nelson Town Centre). The proposal does not involve the loss or provision of education facilities. Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the

14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u> The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site is in use as a golf course and as such is not considered to function towards this LCA. The Site is greenfield and part of the Nelson Golf Course. The Site has a limited frontage from Kings Causeway. It forms the high point in the area with the southern aspect of the Site visible from Burnley to the south. Several PROW cross and run adjacent to the site boundary. Whilst there is an urban context to the area, the site forms part of open countryside which helps to separate Brierfield from Harle Syke and Briercliffe to the South. Development would infringe on this open area and alter the character of walking routes through. Its development will result in a minor adverse effect for this objective.</p> <p><u>Term</u> Permanent adverse effect potential for some reduction with mitigation measures.</p> <p><u>Mitigation</u> Development directed to the northern part of the Site to reduce visually impact from exposed areas to the south.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P125 Land adjacent to 373 King’s Causeway, Brierfield				
SA Objective	Score		Commentary	
Summary: There are positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The delivery of housing and benefits this has in supporting local jobs and businesses results in minor positive effects for economic objectives. The site somewhat distant from most services, facilities and public transport services forming an edge of settlement location therefore promoting travel by car, a neutral effect is assessed for health and wellbeing and regeneration objectives as a result. The loss of open space (with formal and informal recreational use and value) will not be compensated by the proposal however other open space accessible locally will remain. A neutral effect is assessed for health objectives. The site is undeveloped and as such has adverse effects for the making efficient use of land. Beyond this, the site is relatively unconstrained. This reflects its limited scale, contained location, and existing use as part of a golf course. The resulting effect means that the proposal has neutral effects for flood risk, biodiversity and heritage objectives. Some harm is found for landscape objectives. This is related to the viewpoints of the site obtained from the south and from the site towards the south which would be lost if the site was developed. These effects are however limited owing to the limited scale of the proposal and its urban setting. The relatively limited accessibility combined with the near absence of constraints means that the site has been assessed to have a neutral effect for climate change objectives.

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site is previously developed and largely overgrown. The Site is not considered to reflect the wider landscape character or have an important role to secure this. Although in the Green Belt the Site is located at a previously developed site which is well related and enclosed by development. The redevelopment would remove a site which detracts from the quality of the local environment. The Site holds capacity for at least some development and is assessed as having a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>A minor positive effect with mitigation.</p> <p><u>Mitigation</u></p> <p>The proposal will need to be consistent with the scale of development which formally existed at the site to ensure that openness is not harmed. The scale and amount of new buildings should be limited to ensure consistency with the character of the wider built environment.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P126 Former Lakeside Garden Centre, Foulridge			
SA Objective	Score		Commentary
Summary: There are positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The delivery of housing and benefits this has in supporting local jobs and businesses results in minor positive effects for economic objectives. The site is accessible to a number of essential daily services, including public transport services helping to reduce the need to travel by car. The site is previously developed. Its redevelopment for housing would support the regeneration of Foulridge (and Colne) and make effective use of land. The redeveloped and limited scale of the site means that the proposal faces limited constraints. The most significant relates to flood risk from surface water and from associated overtopping of the nearby reservoir resulting in minor adverse effects for flood risk objectives. The redevelopment of the site will remove an overgrown site from the streetscene enhancing townscape. A minor positive effect is assessed for landscape objectives. Accounting for the above a neutral effect is assessed for climate change objectives.

SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 8 dwellings. The proposal will help diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. The proposal site is located in a weak housing market with low viability. The types of homes which could be provided on site is likely to be limited. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability of the site may render the proposal undeliverable (medium to high risk).</p>	
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	-	+	0	<p><u>Likely Significant Effects</u></p> <p>The development site is in use for employment. The site is allocated for mixed use development within the Bradley Area Action Plan. The proposal does not include employment and is only for housing. As a result the proposal would result in the loss of employment land.</p> <p>The Site is located within 2,000m of the nearest major employment site (Nelson Town Centre).</p> <p>The proposal does not involve the loss or provision of education facilities.</p>

Appendix 5: Assessment of Potential Housing Sites

P128 Throstle Nest Mill, Nelson				
SA Objective	Score			Commentary
		0		<p>Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction sector and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a neutral effect for this objective.</p> <p>Term A permanent neutral effect from the short to medium term.</p> <p>Mitigation None.</p> <p>Assumptions None.</p> <p>Uncertainties Use of sustainable modes of transport to access employment. Medium risk.</p>
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	++	0	+	<p>Likely Significant Effects</p> <p>The Site is located within 800m of a town centre (Nelson) No service provision is proposed on site. The proposal is not of a sufficient scale to result in significant pressure for existing services. The Site is within 800m of a primary school and 2000m of a secondary school. The proposal would support local businesses through increased patronage and help diversify housing stock available. Accounting for the above, on balance, the proposal is considered to have a minor positive effect on this objective.</p> <p>Term A minor positive effect from the medium term.</p> <p>Mitigation None.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
			+	
4. To improve the health and wellbeing of those living and working in the Pendle area.	++	0	-	<p>Likely Significant Effects</p> <p>The Site is located within 800m of a GP and open space Little scope exists within the development to accommodate new open space. The site is however accessible to existing areas of public open space. No health facilities are proposed. The development is small in scale and unlikely to create significant pressure on service provision. The proposal site is bordered by both residential and commercial uses. A potential adverse effect exists for future occupiers if redeveloped for housing.</p>

SA Objective	Score	Commentary
		<p>historical relevance noting its connections to Nelson’s industrial legacy. The demolition of the mill is likely to result in less than substantial harm in this respect. Taking this into account, and potential enhancements provided to the urban environment provided by the proposal at mixed effect is assessed for this objective.</p> <p><u>Term</u> Initial adverse effects during construction likely to turn neutral in the longer term once the development is completed. A mixed effect overall.</p> <p><u>Mitigation</u> Existing boundaries to be retained and enhanced where possible. Design, materials and architecture to reflect the existing qualities of the Site, its current use, and industrial legacy.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The delivery of housing and benefits this has in supporting local jobs and businesses is offset by the loss of employment land that will occur as a result of the site’s redevelopment. The site is accessible to a number of essential daily services, including public transport services helping to reduce the need to travel by car. The site is previously developed. Its redevelopment for housing would support the regeneration of Nelson and make effective use of land. The proposal is subject to a significant threat from flooding and as such has a significant adverse effect assessed for this objective. The proposal has adverse effects for the historic environment noting that the proposal would result in the demolition of existing mill building. This has mixed effects for townscape as different effects are provided by the development by the removal of the mill (adverse) and development of quality housing opening the site up and providing an active street frontage (positive). These effects don’t necessarily offset and so mixed effects are assessed. Overall the proposal is assessed as having a minor positive effect for climate change.</p>

SA Objective	Score	Commentary
		<p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is within the Industrial foothills and Valleys Landscape Character Area (Zone 6a). The Site contains features which contributes towards this LCA. The Site features an extensive area of settlement edge agricultural land which rises gently at first from the edge of Barrowford. The Site features hedgerow and dry stone wall boundaries and separates Barrowford from rural farm steads located to the north west. The development of the LCA will have adverse effects on the LCA in the local area. The Site is greenfield, adjoining Barrowford to the west. Development of the Site would represent a significant extension to Barrowford, which fails to reflect the current settlement pattern and would result in an isolated field to the east. The land rises gently from Barrowford increasing in steepness to the west and is largely open. The Site would therefore be visible from the wider area to the west, but is of limited visibility from with Barrowford. A minor adverse effect is assessed.</p> <p><u>Term</u></p> <p>Permanent minor adverse effect from the medium term.</p> <p><u>Mitigation</u></p> <p>Development to take place close to the existing settlement with a strong landscaped boundary to the west and north to reduce impact on open countryside and wider views. Adoption of good design principles. Boundary treatments. Development to be suitably offset from the TPO.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are significant positive effects for housing objectives due to the large contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The delivery of new homes and support this provides to local businesses supports regeneration objectives. The site is served by existing open space and its scale enables the creation of further open space resulting in a positive effect for health objectives. The site is however distant from employment opportunities and public transport provision extending the need to travel by car, this does not support economic or transport objectives. The site is also subject to severe highway constraints within the wider highway network which do not appear to be immediately resolvable thus effectively preventing development on the site of any significant scale. The site is greenfield and as such has adverse effects for making effect use of land. The site is subject to flood risk from various sources resulting in an adverse effect for flood risk objectives. Remaining constraints affecting the site are rather limited. An adverse effect for landscape is assessed noting the site's significant scale, its open character, its role in forming part of the setting of Barrowford and elevated position. The development of the site for housing would fail to reflect the settlement pattern creating a large incongruous expansion of the settlement. Accounting for the above a neutral effect is assessed for climate change objectives.</p>

14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the industrial foothills and valleys Landscape Character Area (Zone 6a). The site reflects some of the qualities of the LCA at a localised level forming the setting of Higherford and providing its rural context when viewed from the Leeds and Liverpool Canal to the east. The boundary along Barnoldswick Road is heavily vegetated removing most transitional views from this vantage. The boundary to the east is more open, comprised of a dry stone wall. Some minor harm to this LCA is likely as a result of its development. Though the site relates reasonably well with the settlement pattern, the Site is designated Green Belt and considered to fulfil the purposes of the Green Belt, especially in its role in preventing urban sprawl and the coalescence of Barrowford with Colne/Foulridge. There are no very special circumstances to justify the release of land from the Green Belt for development. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P136 Land at Ralph Laithe, Barrowford				
SA Objective	Score		Commentary	
Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is served by existing open space and its scale enables the creation of further open space resulting in a positive effect for health objectives. The site is located close to existing public transport provision helping to reduce the reliance of future residents on travel by car supporting transport objectives. The site is however distant from employment meaning that the proposals support to economic and regeneration objectives are weakened. The site is greenfield and as such has adverse effects for making effect use of land. The site has biodiversity value and as such has an adverse effect for biodiversity objectives. Whilst relatively well related to Barrowford and of a scale which is consistent with size and role of Barrowford, the site is highly visible from the east including Barrowford Locks which is a locally important visitor destination. The development of the site may remove or degrade the current rural context of the canal in this location. The site is designated as part of the Green Belt and helps to prevent the urban sprawl of the M65 built-up area and the coalescence of Barrowford with neighbouring towns and villages. As a result the site has a significant adverse effect for landscape and townscape objectives. From existing evidence, the site is largely unaffected by flood risk and the historic environment resulting in a neutral score for these objectives. The site has a neutral effect on climate change objectives.

14. To conserve and enhance landscape character and townscapes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. The Site its current form is not considered to contribute towards this LCA. The Site is in its current use and appearance is low in quality and detracts from the wider area. The redevelopment of the Site for a high quality residential development could also benefit the wider area.</p> <p><u>Term</u></p> <p>Permanent minor positive effect.</p> <p><u>Mitigation</u></p>

Appendix 5: Assessment of Potential Housing Sites

P139 Railway Street Garage Site, Nelson		
SA Objective	Score	Commentary
		<p>High quality design, build and materials. Siting and scale of development to reflect the built surrounds and protect the amenity and wellbeing of its occupiers.</p> <p>Assumptions None.</p> <p>Uncertainties Low viability and financial capacity for high quality materials. High risk.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of the site to existing provision and sources of employment, the site's limited scale and therefore impact on service provision, and the benefits associated with the delivery of new homes to this objective, though some uncertainty exists as to the compatibility of the proposed use with neighbouring employment uses (to be determined through the submission of a planning application). The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. There are few constraints that affect the development. There is little evidence of the site being subject to a high risk of flooding. The site does not affect the historic environment. The proposal is found to benefit townscape objectives by improving the quality of the urban environment. The only constraint observed is the site's role for wildlife in its current condition resulting in a minor adverse effect for this objective. It is anticipated that this constraint could be overcome through the planning application process through a satisfactory design response or the adoption of mitigation measures. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P144 Land off Hollin Bank, Brierfield		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. The Site has the potential to contribute positively to this area given its gateway location and prominence. The Site forms unused space located within the settlement boundary just off Junction 12 of the M65. The Site and its surroundings are not of any particular quality, and the site performs an insignificant role in the townscape. A high quality proposal could alter this to enhance the urban environment.</p> <p><u>Term</u></p> <p>Likely permanent minor positive effects.</p> <p><u>Mitigation</u></p> <p>High quality design which is suitable for its prominent location.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of the site to existing provision and sources of employment, the site's limited scale and therefore impact on service provision, and the benefits associated with the delivery of new homes to this objective, though some uncertainty exists regarding health effects owing to the site's proximity to Junction 12 of the M65 requiring further assessment at the planning application site. The site is highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land and is beneficial in supporting the regeneration of Brierfield and will provide for an efficient use of land. There are few constraints that affect the development. There is little evidence of the site being subject to a high risk of flooding. The site does not affect the historic environment. The proposal is found to benefit townscape objectives by improving the quality of the urban environment at a prominent gateway location to Brierfield when entering the town from the M65. The only constraint observed is the site's proximity to a designated site (the Leeds and Liverpool Canal) and the potential for adverse effects for wildlife using this corridor connected to the site's redevelopment (Low risk). It is anticipated that this constraint could be overcome through the planning application process through a satisfactory design response or the adoption of mitigation measures. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>

		<p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	+/-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area. The nature and form of the Site means that the site may contribute in some way to the qualities of this area, particularly along its frontage. The proposal site is currently in employment use. This use is largely concealed by an existing water which doesn't detract from the streetscene. The redevelopment of the Site has the potential to deliver a changed streetscene by increasing the amount of quality housing in the area. The site however features an existing mill of historical relevance noting its connections to Nelson's industrial legacy. The demolition of the mill is likely to result in less than substantial harm in this respect. Taking this into account, and potential enhancements provided to the urban environment provided by the proposal at mixed effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Initial adverse effects during construction likely to turn neutral in the longer term once the development is completed. A mixed effect overall.</p> <p><u>Mitigation</u></p> <p>Existing boundaries to be retained and enhanced where possible. Design, materials and architecture to reflect the existing qualities of the Site, its current use, and industrial legacy.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health objectives due to the accessibility of the site to existing provision, and the benefits associated with the delivery of new homes to this objective. However the scale of this benefit is limited taking into account the likely adverse effects caused by neighbouring uses which are potentially incompatible. The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. However the site is in active employment use. The redevelopment of the site for housing would result in permanent loss of employment land reducing access to employment opportunities for the local community. There is a risk that suitable alternative premises could not be sourced locally or within the wider borough. The limited economic benefits provided by the proposal would not be sufficient to outweigh the loss of employment land which would result. Beyond this, the only other potential constraint at this point known is the potential value of the site for wildlife requiring appropriate responses to be made through the design process. There is little evidence of the site being subject to a high risk of flooding. The proposal has adverse effects for the historic environment noting that the proposal would result in the demolition of existing mill building. This has mixed effects for townscape as different effects are provided by the development by the removal of the mill (adverse) and development of quality housing opening the site up and providing an active street frontage (positive). These effects don't necessarily offset and so mixed effects are assessed. Overall the proposal is assessed as having a minor positive effect for climate change.</p>

13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result will have a neutral effect on the plan period.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the built area and in use for employment and is within the Industrial Urban Character Area. Neither the site nor its surrounds are of particular built quality, being of industrial, modern and functional in appearance, and there are no designated sites (for their appearance) in vicinity of the Site. This means the site does not contribute significantly to this character area. The redevelopment of the site would give rise to an opportunity to enhance the built quality of the Site which could enhance the wider area. A minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>A minor positive effect for the plan period.</p> <p><u>Mitigation</u></p> <p>High quality design, achieving a sense of place. New public open space. Quality materials.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability and financial capacity for high quality materials. High risk.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The benefits associated with the proposal for health and regeneration objectives are limited due to the site's location which is relatively distant from health and education infrastructure promoting travel by car. This reflects the site's location and existing use for employment with further potential for adverse effects arising as a result of the site's proximity to other existing employment premises. Minor positive effects are however assessed for transport objectives owing to the site's proximity to a high quality public transport corridor. The proposal will make use of previously developed land promoting objectives for the efficient use of land. The site is relatively unaffected by physical constraints such as biodiversity, heritage and flood risk. The redevelopment of the site for housing would result in permanent loss of employment land reducing access to employment opportunities for the local community. There is a risk that suitable alternative premises could not be sourced locally or within the wider borough. The limited economic benefits provided by the proposal would not be sufficient to outweigh the loss of employment land which would result. Minor positive effects are also assessed for health objectives due to the accessibility of the site to existing provision, and the benefits associated with the delivery of new homes to this objective. However the scale of this benefit is limited taking into account the likely adverse effects</p>		

Appendix 5: Assessment of Potential Housing Sites

13. To conserve and enhance the historic environment, heritage assets and their setting.		-	<p>Likely Significant Effects</p> <p>The Site is situated on sloping ground and sits above a listed building to the north. The development of the site for a significant amount of housing has the potential to adversely affect the setting and significance of this listed asset amounting to less than substantial harm. The site holds a strong visual relationship to Colne Town Centre which is a conservation area. The Site is important to the setting of the town. This could result in less than substantial to substantial harm to the historic environment requiring the assessment of public benefits. The proposal is assessed as having a minor adverse effect for this objective.</p> <p>Term</p> <p>Likely permanent minor adverse effects reducing to a limited extent with mitigation measures.</p> <p>Mitigation</p> <p>Relationship of the Site to the listed building to be understood through the submission of further evidence. Impact might be reduced with sensitive siting and scaling of development. Boundary treatments and development of high quality buildings which reflect local materials and character.</p> <p>Assumptions</p>

Appendix 5: Assessment of Potential Housing Sites

P152 Land at Lenches Road/Knotts Lane, Colne		
SA Objective	Score	Commentary
		<p>None</p> <p><u>Uncertainties</u></p> <p>It is unclear whether the public benefits of the proposal would outweigh the harm caused by the proposal to the heritage asset.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Footlands and Valley Landscape Character Area (Zone 6a). The Site contains a number of features which contribute strongly towards this LCA, with heightened importance given the areas visibility from Colne and the South Valley. The Site features steeply sided rural land which is heavily vegetated, and a varied field pattern. The area forms of buffer of undeveloped land between the post-industrial landscape of Colne to the north and rural upland to the south, providing a clear and obvious link within the fabric of the local landscape and providing greenery in the otherwise heavily urbanised skyline of Colne. Its loss to development would adversely affect (potentially significantly) the LCA in this part of Colne. The Site is isolated from the built up area with only a weak link to the existing settlement boundary. The Site forms an illogical extension to the settlement on its own, with undeveloped land to the north between the Site and the main part of Colne. The Site rises upwards from South Valley, and is clearly visible from within Colne in an area which at present is only lightly developed. The proposal is assessed as having a minor adverse effect for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effects from the medium term.</p> <p><u>Mitigation</u></p> <p>Sensitive siting and scaling of development. Boundary treatments and new planting. development of high quality buildings which reflect local materials and character.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability and financial capacity for high quality materials. High risk.</p>
<p>Summary: There are significant positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally limited benefits for economic objectives are also recorded due to the associated benefits for the economy had with the development of new housing. The benefits associated with the proposal for health and regeneration objectives are limited due to the site's location which is relatively distant from health and education infrastructure promoting travel by car. This reflects the site's peripheral location. Similarly the proposal does not benefit regeneration objectives despite taking place in a deprived ward of Colne. The site in its current condition is a valued recreational resources for the local community and would be irreversibly as a result of the proposal. This counters the health benefits associated with the development of providing quality housing which is responsive to the needs of the community. The site relates to undeveloped land and as such has a adverse effect on securing the efficient use of land and natural resources. The proposal has biodiversity value which would be adversely affected by its development. The site sits within a local and much wider historic environment providing the setting to a listed building and indeed the town of Colne. The proposal is likely to result in at least less than substantial harm to the historic environment if it was developed for housing requiring the assessment of public benefits. The site sits on a large, open and highly visible field to the south of Colne which forms and provides the unique setting and character of Colne. The proposal would not sit well with the settlement pattern, and is located almost isolated from existing built form. The proposal would have a harmful effect on landscape objectives. The proposal has neutral effects for flood risk objectives and neutral effects for climate change objectives.</p>

11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0			<p><u>Likely Significant Effects</u></p> <p>The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Neutral effect for the plan period.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	-	0	<p><u>Likely Significant Effects</u></p> <p>The proposal is not located within 100m of a designated site.</p> <p>The Site is covered by an area of ecological interest (LERN record)</p> <p>The Site is not located within the Green Infrastructure network.</p> <p>Overall the proposal is considered to have a likely adverse effect on this objective.</p> <p><u>Term</u></p> <p>Likely adverse effect reducing with mitigation measures.</p>

Appendix 5: Assessment of Potential Housing Sites

P153 Dale Mill, Hallam Road, Nelson		
SA Objective	Score	Commentary
	-	<p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Low viability and scope for ecological benefits.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p><u>Likely Significant Effects</u> The Site is not designated, however features an existing mill building reflective of the industrial heritage of Nelson. The proposal would likely result in its demolition resulting in at least less than substantial harm to the historic environment. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u> Likely minor adverse effect from the medium term.</p> <p><u>Mitigation</u> Photographic record of existing building, retention of materials and building styles where possible.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	+/-	<p><u>Likely Significant Effects</u> The Site is located within the Industrial Urban Character Area. The nature and form of the Site means that the site may contribute in some way to the qualities of this area, particularly along its frontage. The proposal site is currently in employment use. This use is largely concealed by an existing water which doesn't detract from the streetscene. The redevelopment of the Site has the potential to deliver a changed streetscene by increasing the amount of quality housing in the area. The site however features an existing mill of historical relevance noting its connections to Nelson's industrial legacy. The demolition of the mill is likely to result in less than substantial harm in this respect. Taking this into account, and potential enhancements provided to the urban environment provided by the proposal at mixed effect is assessed for this objective.</p> <p><u>Term</u> Initial adverse effects during construction likely to turn neutral in the longer term once the development is completed. A mixed effect overall.</p> <p><u>Mitigation</u> Existing boundaries to be retained and enhanced where possible. Design, materials and architecture to reflect the existing qualities of the Site, its current use, and industrial legacy.</p> <p><u>Assumptions</u></p>

Appendix 5: Assessment of Potential Housing Sites

P153 Dale Mill, Hallam Road, Nelson		
SA Objective	Score	Commentary
		<p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Any positive effects for health objectives due to the benefits associated with the delivery of new homes are limited taking into account the likely adverse effects caused by neighbouring uses which are potentially incompatible. The site is accessible to some existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives however the site is located within a peripheral location of Nelson which may discourage some users. The site relates to previously developed land and is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. However the site is in active employment use. The redevelopment of the site for housing would result in permanent loss of employment land reducing access to employment opportunities for the local community. There is a risk that suitable alternative premises could not be sourced locally or within the wider borough. The limited economic benefits provided by the proposal would not be sufficient to outweigh the loss of employment land which would result. The site is also subject to a significant degree of flood risk which is likely to render the proposal unsuitable for housing. Beyond this, the only other potential constraint at this point known is the potential value of the site for wildlife requiring appropriate responses to be made through the design process. The proposal has adverse effects for the historic environment noting that the proposal would result in the demolition of existing mill building. This has mixed effects for townscape as different effects are provided by the development by the removal of the mill (adverse) and development of quality housing opening the site up and providing an active street frontage (positive). These effects don't necessarily offset and so mixed effects are assessed. Overall the proposal is assessed as having a minor positive effect for climate change.</p>

SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area but does not reflect the features of this area or contribute towards its built quality. The Site is greenfield forming part of an area of undesignated open space which is considered to be important to settlement character as well as providing a locally important source of recreation. The Site forms a locally valued landscape and is highly visible from the wider area. The development of the site for housing will harm the setting of the settlement resulting in an irreversible loss of locally valued land resulting in an urbanising effect. The Site is considered to hold historic sensitivity. A group TPO sits along the northern boundary of the Site. Minor adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effects from the medium term.</p> <p><u>Mitigation</u></p> <p>Sensitive siting and scaling of development. Boundary treatments and new planting. Development of high quality buildings which reflect local materials and character. New quality and publically accessible open space.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability and financial capacity for high quality materials. High risk.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally limited benefits for economic and regeneration objectives are also recorded due to the associated benefits for the economy had with the development of new housing. The benefits associated with the proposal for health are limited due to the site's recreational value for the local community in its current form. The site benefits transport objectives due to the site's accessibility via public transport and close proximity to a number of essential daily services which serve to reduce reliance on travel by car. The site relates to undeveloped land and as such has an adverse effect on securing the efficient use of land. The proposal site has biodiversity value which would be adversely affected by its development. The site forms the setting of a listed building and its development for housing is likely to result in at least less than substantial harm supporting the adverse effect assessed for the proposals effect on the historic environment. The site sits on an open and visible field within the urban area which is important for recreation and settlement character. Its development would harm this character reducing the break in development provided in the area. The proposal has neutral effects for flood risk objectives, although its proximity to an area with known drainage issues will likely result in the need for the adoption of drainage infrastructure. The proposal has neutral effects for climate change objectives.</p>

		<p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u> The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site does not feature any of the qualities of this LCA comprising of a flat area of public open space. The Site is of limited scale and visibility and relates well to the urban area. The development of a high quality scheme at this location could enhance the wider environment. Overall a neutral effect has been assessed for this objective.</p> <p><u>Term</u> Likely permanent neutral effects with adoption of mitigation measures.</p> <p><u>Mitigation</u> High quality design, achieving a sense of place. Sensitive boundary treatment, including the retention of TPOs</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health, regeneration, and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes for these objectives. The site is highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site is greenfield and therefore has adverse effects for securing the efficient use of land and natural resources. The site is subject to a significant degree of surface water flood risk which would render the site unsuitable for housing if this cannot be adequately addressed. The site has value for wildlife and forms part of the green infrastructure network. Its development would therefore adversely affect ecological objectives. The site is found to unlikely affect the historic environment. Its limited scale and contained nature means that the proposal is unlikely to adversely affect landscape or townscape objectives. The proposal has a minor positive effect for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P176 Land at the end of Southfield Street, Nelson				
SA Objective	Score		Commentary	
Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health, regeneration, and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes to these objectives. The site has limited accessibility to public transport due to its peripheral location. It is also unclear how vehicle access could be obtained to the site. This is a barrier to the site's development. The site is greenfield and therefore has adverse effects for securing the efficient use of land and natural resources. The site is subject to a degree of surface water flood risk which would could affect developable area and viability. The site has value for wildlife and its development would therefore adversely affect ecological objectives. The site is found to unlikely affect the historic environment. The site is undeveloped and relatively isolated from the existing built area. The proposal would be visible from public routes and urbanise a currently undeveloped area. Adverse effects are assessed for landscape/townscape objectives. The proposal has a minor positive effect for climate change objectives.

SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Limited viability to secure a well design scheme. High risk.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health, regeneration, and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes to these objectives. The site benefits from relatively good access to existing services, shops and sources of employment promoting modal shift. It is also near to public transport routes. The proposal is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. The proposal site is affected by a high risk of flooding from surface water and ground water flooding. If a technical solution cannot be found within the viability of the proposal then this constraint would render the site unsuitable for housing. In addition the site for wildlife requiring appropriate responses to be made through the design process. Adverse effects are therefore found for biodiversity objectives. The site does not affect the historic environment. The proposal is found to benefit townscape objectives by improving the quality of the urban environment including the streetscene making use of redundant land. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>

		None.
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site is part development and contained entirely on each side by development within Barrowford. It is not considered that the Site contributes to this LCA. The Site is likely in part to have some historic sensitivities which will need to be assessed and understood further, and suitably addressed. The wider site is overgrown with existing development which detracts from the wider area due to its current condition. The Site forms a logical infill site. It could also provide for an enhanced urban environment forming a buffer between existing dwellings and the commercial site to be retained to the east. Overall a neutral effect is assessed.</p> <p><u>Term</u></p> <p>Neutral effect from the medium to long term with mitigation.</p> <p><u>Mitigation</u></p> <p>Development near to the conservation area and listed buildings minimised. Boundary treatments and offset development in the south east to reduce interaction to the conservation area and listed building. High quality buildings and design using local materials which reflects and respects the conservation area. Affects to be assessed through the planning application.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and regeneration objectives due to the accessibility of the site to existing service provision and the benefits associated with the delivery of new homes to these objectives. The accessibility of the site by foot to nearby services is not sufficient to outweigh adverse effects identified to transport objectives identified as a result of the site's distance from public transport connections and highway connectivity problems caused by local capacity issues. The site is also some distance away from employment sites reducing the economic benefits of the proposal. The site relates to land which is partly previously developed and partly undeveloped and as a result has a mixed effect on the objective to make efficient use of land. The proposal experiences some risk of flooding from surface water and ground water flooding. This may affect site capacity. The site has some value for wildlife in its current form requiring appropriate responses to be made through the design process. Adverse effects are therefore found for biodiversity objectives. The proposal is located in close proximity to Barrowford Conservation Area and a number of listed buildings. Changes in elevation and intervening vegetation are likely to minimise the potential for harm as a result of the proposal however a finding of minor adverse effects is nevertheless identified. The proposal is found to have a neutral effect on landscape/townscape objectives owing to the contained nature of the site and its low quality, balanced against the observed potential effect on the conservation area. The proposal has a minor positive effect for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P191 Former School and Presbytery, Richard Street, Brierfield				
SA Objective	Score		Commentary	
Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of the site to existing provision and sources of employment, the site’s limited scale and therefore impact on service provision, and the benefits associated with the delivery of new homes to this objective, though some uncertainty exists regarding health effects owing the site’s proximity to existing commercial uses. The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Brierfield and will provide for an efficient use of land. There are few constraints that affect the development. The site is subject to a high risk of flooding. This may render the site unsuitable for the proposed use. The site does not affect the historic environment. The proposal is found to benefit townscape objectives by improving the quality of the urban environment. Taking the above into account the proposal has a minor positive effect for climate change objectives.				

P205 Land off School Fields, Earby				
SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		Likely Significant Effects The Site has capacity for 18 dwellings. The proposal help to improve the quality of existing housing stock and diversify housing land supply including affordable housing needs. Taking this into account, it is concluded that the proposal will have a minor positive effect for this policy objective. Term Permanent minor positive effects from the medium term Mitigation Planning obligations for the mix of housing Assumptions None. Uncertainties None.	
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	Likely Significant Effects The development site is not currently used for employment. The Site is located in within 2,000m of the nearest major employment site (West Craven Business Park). The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision. The proposal will aid the local economy through additional local spend and contributors to the economy through the supply of additional workforce. The development of the site will support jobs in the construction sector in the short term. Accounting for the above, the site is considered to have a minor positive effect for this objective. Term Likely permanent minor positive effects. Mitigation

	0		
13. To conserve and enhance the historic environment, heritage assets and their setting.	+/-		<p>Likely Significant Effects</p> <p>The Site is situated close to the Earby Conservation Area and is near a Grade II* Listed building. The proposal occupies a small pocket of open land which is bordered by industrial uses. The proposal would reduce visibility of the industrial uses which detract from the historic environment but will replace this with new housing in closer proximity. Mixed effects are assessed for this objective.</p> <p>Term</p> <p>Likely significant positive effects with the implementation of mitigation measures in the longer term.</p> <p>Mitigation</p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	0		<p>Likely Significant Effects</p> <p>The Sites forms part of the Drumlin Fields Landscape Character Area (Zone 13a). The Site does not include any features which contribute to this character area being previously development and wholly within the settlement of Earby. The site is small in scale and contained by neighbouring uses. The development of the site for housing is unlikely to adversely affect landscape character. A neutral effect is assessed for this objective.</p> <p>Term</p> <p>Likely permanent neutral effect from completion of the development.</p>

Appendix 5: Assessment of Potential Housing Sites

P205 Land off School Fields, Earby		
SA Objective	Score	Commentary
		<p><u>Mitigation</u></p> <p>High quality development which is consistent with and sensitivity to the existing built surrounds, quality and character of the conservation area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing, and economic objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic benefits of new homes. The site is highly accessible to existing services and facilities and as a result score positively for transport objectives. The proposal is located adjacent to potentially harmful land uses to human health and therefore an adverse effect is assessed for health objectives. The potential adverse effect caused by adjacent uses is unlikely to be sufficiently mitigation and outweighs the health benefits delivered by the provision of new houses. The site is in the settlement boundary but greenfield. There adverse effects for securing the effective use of land. The site is located relatively close to Earby Beck and there are some flood risk associated with the site which would need to be satisfactorily addressed through the site's development. The site is not known to have a role for biodiversity although further assessment will be required. The site is located adjacent to the Earby Conservation Area and close to a Grade II* Listed Building. Its development is likely to affect the setting of the historic environment. This setting is already adversely affected by heavy industrial uses located next to the site and in clear visibility. The proposal would disrupt this view changing the aspect however this would not necessarily be a positive effect. Mixed effects are assessed for heritage objectives. The site's form and character does not display the key features of the local landscape area. The site is located within the settlement boundary, is small in scale and contained by existing uses. The proposal will therefore have a neutral effect for landscape objectives. As a result and taking the above into account the proposal scores positively for climate change objectives.</p>

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area and is previously developed and located in close proximity to the Whitefield Conservation Area. The Site in its current form is overgrown and detracts from the wider area. The redevelopment of the Site for a high quality development could enhance the area and contribute towards the qualities of the Conservation Area. It will also benefit the users of the Leeds Liverpool Canal with the site visible from the canal to the rear. The proposal is assessed to have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>Likely minor positive effects from the medium term with adoption of mitigation measure.</p> <p><u>Mitigation</u></p> <p>High quality buildings and design using local materials which reflects and respects the conservation area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Limited viability to secure a well design scheme. High risk.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes to this objective. The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. There are few constraints that affect the development. The proximity of the site to the Leeds and Liverpool Canal may affect site capacity and/or require engineering works to prevent any collapse of the banking or the canal. The site has some biodiversity value largely due to its proximity to the Leeds and Liverpool Canal. Offsetting development from the canal and enhancing this green corridor may be sufficient to address this issue. The site is located close to the Whitefield Conservation Area. The current condition of the site detracts from the historic environment. The proposal has the potential to benefit this designation. Similarly, the proposal is found to benefit townscape objectives by improving the quality of the urban environment. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>

1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 30 dwellings. The proposal will help diversify and improve the quality of the housing stock of Nelson helping to ensure that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. The proposal is located in a weak market area. Low viability means that the proposal is unlikely to provide any affordable housing.</p>

				Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective. <u>Term</u> Minor positive effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> The site is located in an area of Pendle which experiences low viability. The delivery of the site is highly sensitive to cost burdens.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The site is not in use for employment The Site is located within 2,000m of the nearest major employment site (Hallam Road Business District) The proposal does not involve the loss or provision of education facilities. Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a minor positive for this objective. <u>Term</u> A permanent minor positive effect from the short term. <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	+			
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	++	-	++	<u>Likely Significant Effects</u> The Site is located within 800m of a town centre (Nelson) No service provision is proposed on site. The development will result in increased pressure on services. The Site is within 800m of a primary school and secondary school. The proposal would support local businesses through increased patronage and help diversify housing stock available. Accounting for the above, on balance, the proposal is considered to have a significant positive effect on this objective.

14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u> The Site is located within the Industrial Urban Character Area however contains none of the features which contributes towards this LCA. Whilst previously undeveloped, the Site forms a well contained and logical location for development. The Site is unlikely to adversely or positively affect the local landscape or townscape given its contained nature and limited visibility from public views. Existing TPO along the eastern boundary of the Site adjacent to the cemetery should be retained. Boundary treatment works to ensure prevent/minimise the potential for adverse effects on amenity and health and wellbeing of neighbours. It is concluded that the proposal is likely to have a neutral effect for this objective.</p> <p><u>Term</u> Likely permanent neutral effects with adoption of mitigation measures.</p> <p><u>Mitigation</u> Retention and offset of TPO. Boundary treatment works.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of existing sources of employment and existing health facilities and open space provision to the proposal site, and the benefits associated with the delivery of new homes to this objective. The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land and its redevelopment is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. There are few constraints that affect the development. The site has some biodiversity value largely due to being largely overgrown and hidden from key transport routes. The proposal does not affect flooding and heritage objectives. A neutral effect is assessed for impact on townscape because of the site's contained location and limited visibility from key routes or vistas. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P221 Bright Terrace, Trawden		
SA Objective	Score	Commentary
<p>Summary: There are minor positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is accessible to some services, however local employment opportunities are limited. As a result the site has a neutral effect for regeneration and economic objectives notwithstanding the positive contribution new housing makes towards fulfilling these objectives. Neutral effects are also assessed for transport objectives noting the site's limited scale, its proximity to a regular bus service and existing capacity problems experienced within the local highway network due to on-street parking. The proposal has positive effects for health objectives due to the accessibility of the site to existing healthcare and open space provision. The site is undeveloped and as such has adverse effects for the making efficient use of land and use of natural resources. The site is relatively unconstrained in terms of flood risk. Further assessment is needed to evidence the effect this might have on site suitability/deliverability. The Site is located within a conservation area and is likely to result in at least less than substantial harm to this asset requiring consideration of public benefits with adverse effects assessed for heritage objectives. The site is not known to be of ecological value with further assessment requirement. The site is an edge of settlement location and does not relate well to the wider settlement pattern, despite the limited scale of the site. The site is visible from wider areas and its development will alter the character of the area. A minor adverse effect is assessed for landscape objectives. Overall a minor positive effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P224 Russell Brothers Ltd, Nelson		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The proposal site sits within the urban area and within the Industrial Urban Character Area. The Site does not in its current form and use contribute towards this character area and detracts from the wider urban environment, its redevelopment for housing could enhance this environment. A minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Any adverse effects likely to be extremely limited and experienced only during construction (at demolition) likely to turn positive post completion.</p> <p><u>Mitigation</u></p> <p>Existing natural boundaries to be retained and enhanced as far as possible. Development to be limited in extent to be consistent with existing built form.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for health and economic objectives due to the accessibility of existing sources of employment and existing health facilities and open space provision to the proposal site, and the benefits associated with the delivery of new homes to this objective. The economic benefits of the proposal are however countered by the loss of employment land which would result as a consequence of the site's redevelopment for housing. A neutral effect is assessed for employment objectives. The site highly accessible to existing services, shops and sources of employment promoting modal shift and is therefore beneficial to transport objectives. The site relates to previously developed land is beneficial in supporting the regeneration of Nelson and will provide for an efficient use of land. There are few constraints that affect the development. The biodiversity value of the site will need further assessment, in particular existing structures and their value as possible nesting habitats for protected species. The proposal does not affect flooding and heritage objectives. A minor positive effect is assessed for the proposals effect on townscape given the increase in build quality which will occur as a result of the proposal's development. Taking the above into account the proposal has a minor positive effect for climate change objectives.</p>		

P225 Little Tom's Farm (Land off Bowland View), Little Tom's Lane, Brierfield		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 61 dwellings (though part of the site has outline planning permission for 19 dwellings). The proposal will help diversify and improve the quality of the housing stock of Brierfield helping to ensure that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Low viability means that the proposal is unlikely to provide any affordable housing. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p>

Appendix 5: Assessment of Potential Housing Sites

P225 Little Tom’s Farm (Land off Bowland View), Little Tom’s Lane, Brierfield				
SA Objective	Score			Commentary
				Minor positive effects from the medium term <u>Mitigation</u> Planning obligations for the mix of housing <u>Assumptions</u> None. <u>Uncertainties</u> The site is located in an area of Pendle which experiences low viability. The delivery of the site is highly sensitive to cost burdens.
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<u>Likely Significant Effects</u> The Site is not in use for employment. The Site is located within 2,000m of the nearest major employment site (Burnley). The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision. Accounting for the above, the proposal is considered to have a minor positive effect for this objective. <u>Term</u> A minor positive effect for the plan period.
	+			<u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	+	-	+	<u>Likely Significant Effects</u> The Site is located within 800m of one or more key services. No service provision is proposed on site. The development will result in increased pressure on services. The Site is within 800m of a primary school and 2000m of a secondary school. The proposal would support local businesses through increased patronage and help diversify housing stock available. Accounting for the above, on balance, the proposal is considered to have a minor positive effect on this objective.
	+			<u>Term</u> A permanent minor positive effect from the short term. <u>Mitigation</u> Planning contributions may be required towards service provision where required and tests are met. <u>Assumptions</u> None.

Appendix 5: Assessment of Potential Housing Sites

SA Objective	Score			Commentary
				<u>Uncertainties</u> None.
4. To improve the health and wellbeing of those living and working in the Pendle area.	+	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of a GP or open space. The Site is well used locally as an informal source of open space benefitting residents of Burnley as well as Pendle. Whilst scope exists within the development to accommodate new open space the provision provided would be less and in an entirely different condition to that currently present. No health facilities are proposed and the development would increase pressure on existing facilities. The proposal is located adjacent to existing residential uses, agricultural uses and a golf course. The proposal is considered to be compatible with these uses. On balance the proposal is considered to likely have a neutral effect on this objective. <u>Term</u> Neutral effect from the medium term with the implementation of mitigation measures. <u>Mitigation</u> Contribution towards open space facilities including on space provision. <u>Assumptions</u> None. <u>Uncertainties</u> Low viability may mean that contributions towards open space are not possible at risk of putting overall deliverability of the proposal into doubt (Medium risk).
			0	
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0	<u>Likely Significant Effects</u> The Site is located within 400m of one or more transport services. There are no known highway capacity issues in the area. The development would not support investment in, or result in the loss of transport infrastructure and services. Accounting for the above, the proposal is assessed as having a likely minor positive effect for this objective. <u>Term</u> A likely minor positive effect from the medium term. <u>Mitigation</u> Investment in cycle storage and pedestrian and cycle links. Contribution towards transport infrastructure. <u>Assumptions</u> None. <u>Uncertainties</u>
			+

SA Objective	Score	Commentary
		<p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a), and at a local level contributes significantly to this LCA. The Site contains many of the features of this LCA, such as a wider open landscape, dry-stone walls, trees and vegetation, and occupies a sloping hill which is highly visible to the south. The Site forms part of a larger area of open land which is used for informal recreation. The Site is forms a locally valued area, and has previously been dismissed at appeal for its landscape effects. Developing the site will affect the landscape character of the site. The effects of this are limited to minor adverse noting that the site does not form part of area designated for its special landscape and will be seen in the context of existing and adjacent neighbouring modern development. As such a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Likely permanent minor adverse effects reducing as the development matters. A smaller development would have lesser effects.</p> <p><u>Mitigation</u></p> <p>Smaller development confined to close to the built up area in the southern part of the Site which is lower and less visible. Boundary treatment works. Open Space and enhanced routes to remaining open space to the north and east.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for regeneration, and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes to these objectives. The site is accessible to a number of services available locally as well as public transport routes helping to reduce car usage. The site is greenfield and therefore has adverse effects for securing the efficient use of land and natural resources. The site currently forms part of a larger area which is heavily used by local residents for recreation. The benefits of new development towards health objectives is offset by this loss resulting in a neutral effect for health objectives. The site not found to be at significant risk from flooding from any sources and its development is unlikely to affect the historic environment. The site has biodiversity value resulting in adverse effects for ecological objectives. The proposal relates to a large open area which is in an elevated and prominent position above Burnley. Whilst the area is not subject to any formal landscape designation the proposal site does however form part of larger open space which forms an important role in breaking up the urban area, is valued by the community, and contributes to the setting of Brierfield and Burnley. The proposal therefore has a minor adverse effect for landscape objectives. The proposal has a neutral effect for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P228 Land off Old Lane, Earby				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 69 dwellings including affordable dwellings. The proposal will help diversify and improve the quality of the housing stock of Earby helping to ensure that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	--	+	0	<p><u>Likely Significant Effects</u></p> <p>The site is currently actively used for employment purposes. Its redevelopment for housing would result in a loss of employment land. The Site is located within 2,000m of the nearest major employment site (Hallam Road Business District)</p> <p>The proposal does not involve the loss or provision of education facilities.</p> <p>Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction section and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a minor negative for this objective.</p> <p><u>Term</u></p> <p>A permanent minor negative effect from the short term.</p> <p><u>Mitigation</u></p> <p>Alternative premises would need to be found for existing businesses to prevent their closure or relocation outside of the Borough. Nonetheless a degree of harm would remain as local access to employment opportunities would be permanently removed.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Existing employers find suitable alternative employment premises within the locality or borough (medium risk)</p>

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). It is not considered to contribute to the qualities of the LCA given its current developed form. The Site is located adjacent to the Earby Conservation Area. The current forms of the Site is likely to adverse effect the setting on the Conservation Area in this area. The Site's redevelopment could enhance this aspect removing large functional industrial type buildings from the setting of the Conservation Area. The Site is located on the edge of Earby and visible from the north. Similarly the redevelopment of the site gives rise to reduce this visibility and enhance its effect on the wider open countryside.</p> <p><u>Term</u></p> <p>A likely positive effect with mitigation.</p> <p><u>Mitigation</u></p> <p>High quality buildings and design using local materials which reflects and respects the conservation area. Boundary treatment works to reduce effects of site and its wider visibility on the wider open countryside Affects to be assessed through the planning application.</p> <p><u>Assumptions</u></p>

Appendix 5: Assessment of Potential Housing Sites

P228 Land off Old Lane, Earby		
SA Objective	Score	Commentary
		None <u>Uncertainties</u> None.
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is accessible to a number of services available locally as well as public transport routes helping to reduce car usage benefiting transport objectives. The proposal site is in employment use and its redevelopment for housing could result in the loss of employment locally. The limited economic contribution associated with the delivery of new housing is not sufficient to outweigh the adverse effect caused by the loss of employment land. The proposal has mixed affects for health objectives, noting the proposals accessibility to existing services and facilities and the benefit of quality housing for health and wellbeing against the potential adverse effects caused by neighbouring uses on the health and wellbeing of the site's future occupiers. The site is brownfield and its redevelopment will support regeneration objectives, and make effective use of land. The proposal will also benefit the historic environment and local townscape by removing an industrial site from the area. The proposal site is not found to any noteworthy role for wildlife and biodiversity, however further assessment will be required. The site is closely related to Earby Beck and suffers from a high risk of flooding. The proposal site is not therefore suitable for the development of housing. Neutral effects are found for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P229 Land to south of Green Meadow, Trawden		
SA Objective	Score	Commentary
		Site specific detail to be assessed at the planning application stage. Effects of climate change on flood risk. Addressing flood risk issues may increase development costs and/or reduce site capacity threatening viability (low-medium risk)
9. To improve air quality.	0	<p>Likely Significant Effects The Site is located in excess of 500m of the Colne AQMA. The site is unlikely to contribute towards air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p>Term Neutral effects over the plan period.</p> <p>Mitigation Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p>Assumptions None</p> <p>Uncertainties Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	<p>Likely Significant Effects The site has a suitability score of 4.26. The site therefore has a minor positive effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p>Term Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p>Mitigation Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p>Assumptions None.</p> <p>Uncertainties Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p>Likely Significant Effects The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p>Term Permanent loss where developed.</p> <p>Mitigation To be determined in consultation with Lancashire County Council.</p> <p>Assumptions</p>

Appendix 5: Assessment of Potential Housing Sites

P229 Land to south of Green Meadow, Trawden				
SA Objective	Score			Commentary
				Site does not provide a commercially attractive or viable site for extraction. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The Site does not affect any designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved grassland The Site is not located within the Green Infrastructure network. Overall the proposal is considered to have a neutral effect on this objective. <u>Term</u> Neutral effect likely to remain permanent with mitigation. <u>Mitigation</u> Retain and enhance existing habitats. Creation of new habits as appropriate within open space, landscaping and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	0			
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<u>Likely Significant Effects</u> The Site is located within the Trawden Forest Conservation Area. The site is situated within a prominent part of the conservation area which is highly visible. The development of the site will alter the character of this part of the settlement and remove an existing gap between different built-up parts of the settlement. The proposal is likely to result in less than substantial harm to the historic environment. A minor adverse effect is assessed for this objective. <u>Term</u> Adverse effects for the plan period. <u>Mitigation</u> High quality development which is consistent with and sensitivity to the existing built surrounds. Boundary treatments to limit visibility of the development from the wider area and its impact on the open countryside. <u>Assumptions</u> None <u>Uncertainties</u> It is unclear whether the public benefits of the proposal would outweigh the harm caused by the proposal on the historic environment (medium – high risk)

Appendix 5: Assessment of Potential Housing Sites

P229 Land to south of Green Meadow, Trawden		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site sits within the Industrial Footlands character area. The site in its current form makes a positive contribution to the character of the area, including the wider setting of Trawden. The site is somewhat contained by wider development but relates to a steeply sided valley close to a watercourse increasing its visibility to a wider area. Its development would remove a distinctive break in the settlement pattern. The site is visible from wider public routes, particularly to the south and within Trawden and will alter the character of the area to its detriment. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Effects of proposal likely to be most significant in the shorter term during the construction with the effects reducing to a minor adverse effect in the longer term.</p> <p><u>Mitigation</u></p> <p>Sensitive design responses to local landform and architecture. Siting, scale, appearance of development and role of landscaping.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is accessible to some services, however local employment opportunities are limited. As a result the site has a neutral effect for regeneration and economic objectives notwithstanding the positive contribution new housing makes towards fulfilling these objectives. Neutral effects are also assessed for transport objectives noting the sites proximity to a regular bus service and existing capacity problems experienced within the local highway network due to on-street parking. The proposal has positive effects for health objectives due to the accessibility of the site to existing healthcare and open space provision as well as opportunities for new open space within the site boundaries. The site is undeveloped and as such has adverse effects for the making efficient use of land and use of natural resources. The site is relatively unconstrained in terms of flood risk. Further assessment is needed to evidence the effect this might have on site suitability/deliverability. The Site is located within a conservation area and is likely to result in at least less than substantial harm to this asset requiring consideration of public benefits with adverse effects assessed for heritage objectives. The site is not known to be of ecological value with further assessment requirement. The site is an edge of settlement location relating to undeveloped land along a watercourse and steep rising landscape. The site is visible from wider areas and its development will alter the character of the area. A minor adverse effect is assessed for landscape objectives. Overall a minor positive effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P230 Land at Clay Farm (Site B), Brierfield		
SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is closely related to a listed building and its development for housing is likely to result in at least less than substantial harm to this asset owing the loss of agricultural context to the building. It is unlikely given the relationship between the site and this listed building that this can be significantly reduced. An assessment of the public benefits of the proposal will be necessary. The proposal is found to have a minor adverse effect for this objective.</p> <p><u>Term</u></p> <p>Likely minor adverse effect reducing in the longer term with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Relationship of the Site to the listed building to be understood through the submission of further evidence. Sensitive siting and scaling of development. Boundary treatments and development of high quality buildings which reflect local materials and character could reduce impact but not remove harm.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>It is unclear whether the public benefits of the proposal would sufficiently outweigh the likely harm caused by the proposal on the historic environment (medium – high risk)</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Urban Character Area but does not reflect the features of this area or contribute towards its built quality. The Site is greenfield forming part of an area of undesignated open space which is considered to be important to settlement character as well as providing a locally important source of recreation. The Site forms a locally valued landscape and is highly visible from the wider area. The development of the site for housing will harm the setting of the settlement resulting in an irreversible loss of locally valued land resulting in an urbanising effect. The Site is considered to hold historic sensitivity. A group TPO sits along the northern boundary of the Site. Minor adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Likely permanent minor adverse effects.</p> <p><u>Mitigation</u></p> <p>Sensitive siting and scaling of development. Boundary treatments and new planting. Development of high quality buildings which reflect local materials and character. New quality and publically accessible open space.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability and financial capacity for high quality materials. High risk.</p>

Appendix 5: Assessment of Potential Housing Sites

P230 Land at Clay Farm (Site B), Brierfield				
SA Objective	Score		Commentary	
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally limited benefits for economic and regeneration objectives are also recorded due to the associated benefits for the economy had with the development of new housing. The benefits associated with the proposal for health are limited due to the site’s recreational value for the local community in its current form. The site benefits transport objectives due to the site’s accessibility via public transport and close proximity to a number of essential daily services which serve to reduce reliance on travel by car. The site relates to undeveloped land and as such has an adverse effect on securing the efficient use of land and use of resources. The proposal has biodiversity value which would be adversely affected by its development. The site forms the setting of a listed building and its development for housing is likely to result in at least less than substantial harm supporting the adverse effect assessed for the proposals effect on the historic environment. The site sits on an open and visible field within the urban area which is important for recreation and settlement character. Its development would harm this character reducing the break in development provided in the area. The proposal has neutral effects for flood risk objectives, although its proximity to an area with known drainage issues will likely result in the need for the adoption of drainage infrastructure. The proposal has neutral effects for climate change objectives.</p>

	-			<p>economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a minor negative for this objective.</p> <p>Term A permanent minor negative effect from the short term.</p> <p>Mitigation Alternative premises would need to be found for existing businesses to prevent their closure or relocation outside of the Borough. Nonetheless a degree of harm would remain as local access to employment opportunities would be permanently removed.</p> <p>Assumptions None.</p> <p>Uncertainties Existing employers find suitable alternative employment premises within the locality or borough (medium risk)</p>
3. To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	+	-	0	<p>Likely Significant Effects The Site is located within 800m of one or more key service or 2000m of a town centre (Barnoldswick) No service provision is proposed on site. The development will result in increased pressure on services. The Site is within 2000m of a primary school. The proposal would support local businesses through increased patronage and help diversify housing stock available. Accounting for the above, on balance, the proposal is considered to have a neutral effect on this objective.</p>
	0			<p>Term A permanent neutral effect</p> <p>Mitigation Planning contributions may be required towards service provision where required and tests are met.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
4. To improve the health and wellbeing of those living and working in the Pendle area.	0	-	-	<p>Likely Significant Effects The Site is located within 2000m of a GP or open space. Little scope exists within the development to accommodate new open space. No health facilities are proposed and the development would increase pressure on existing facilities. The proposal is located adjacent to proposed employment uses and open countryside. A residential use of the site may not be compatible with proposed employment uses on the adjacent site with adverse effects for future occupiers likely. On balance the proposal is considered to likely have a minor adverse effect on this objective.</p>
	-			<p>Term</p>

9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The site is not of a sufficient scale to contribute towards a material worsening of air quality problems locally. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	<p><u>Likely Significant Effects</u> The site has a suitability score of 4.04. The site therefore has a minor positive effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk. Viability of proposal to support the delivery of sustainable homes in accordance with standards – High Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p> <p><u>Uncertainties</u></p>

Appendix 5: Assessment of Potential Housing Sites

P232 Land to the rear of Fernbank Mill, Barnoldswick			
SA Objective	Score		Commentary
			None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	<u>Likely Significant Effects</u> The proposal is not located within 100m of a designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is not located within the Green Infrastructure network. Overall the proposal is considered to have a likely neutral effect on this objective. <u>Term</u> Neutral effect from the medium to long term with successful implementation on mitigation measures. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	0		
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<u>Likely Significant Effects</u> The proposal is unlikely to adversely affect Calf Hall and Gillians Conservation Area despite its proximity. The site is not within visual range of this conservation area given changes in intervening topography and vegetation. The site is currently in industrial use and any redevelopment of the site would result in at least no change to the wider environment, with potential for beneficial effects depending on the quality of the site of the development including boundary treatments. <u>Term</u> Permanent neutral effects. <u>Mitigation</u> None. <u>Assumptions</u> None <u>Uncertainties</u> None.
14. To conserve and enhance landscape character and townscapes.	0		<u>Likely Significant Effects</u> The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). Whilst, the elevated position of the Site may enable visual connection to land in the Drumlin Field, the PDL nature of the Site means it does not contribute towards the LCA. The Site is formed of brownfield land isolated for the built up area of Barnoldswick. The Site is not recognised for its landscape or townscape

Appendix 5: Assessment of Potential Housing Sites

P232 Land to the rear of Fernbank Mill, Barnoldswick		
SA Objective	Score	Commentary
		<p>quality. The Site protrudes outwards from the built up area and highly visible from the west. The Site however in its current form is low in quality and as such its redevelopment could enhance this environment if development sensitively. Overall a neutral effect is assessed for this objective.</p> <p><u>Term</u> Minor adverse effect reducing to towards neutral in the longer term with mitigation.</p> <p><u>Mitigation</u> Adoption of high quality design principles which is sensitive and responsive to local vernacular. High quality boundary treatments. Development alongside P057</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is currently used for employment purposes. The redevelopment of the site for housing could result in the loss of employment opportunities locally. An adverse effect is assessed for economic objectives. The site is adjacent to land used for employment and open countryside. The proposal for housing is unlikely to be compatible in this location noting these neighbouring land uses. The site is brownfield and therefore has positive effects for the efficient use of land and assisting the regeneration of Barnoldswick. The proposal site is subject to a high risk of flooding from groundwater. Further investigation is needed of this issue with mitigation measures put in place to address this. The result may be a reduced capacity of the site for housing, or ultimately render the site unsuitable for housing. The proposal is unlikely to adversely affect biodiversity, heritage or landscape objectives noting the site's current form and active uses. Overall the proposal has a minor positive effect for climate change objectives.</p>

SA Objective	Score	Commentary
		<p>safeguarding against the coalescence of Colne with Barrowford. No Very Special Circumstances exist to justify the development of the Site in conflict with national planning policy for Green Belt. A significant adverse effect is therefore identified for this objective.</p> <p><u>Term</u> Permanent significant adverse effects.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health and economic objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy. There are little benefits associated with regeneration objectives due to the relatively poor accessibility of the site to nearby services and shops. Positive effects are however assessed for transport objectives noting the site's access to public transport. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land. There site experiences a degree of flooding which is likely to affect development capacity. The proposal is unlikely to affect the historic environment. The proposal is located in close proximity to an ecological designation and has attached biodiversity value. The proposal has an adverse effect for biodiversity objectives. The development of the site would result in urban sprawl and reduce the existing gap between Colne and Barrowford resulting the loss of an important site for the functionality of the green belt locally. A significant adverse effect is assessed for landscape. Accounting for the above the proposal has a neutral effect for climate change objectives.</p>

SA Objective	Score	Commentary
		<p>The Site contains land which is previously developed and is now being reclaimed by nature. The site is derelict. Its redevelopment will have significant positive effects for this objective. The southern part of the site is greenfield. Mixed effects are therefore assessed for this SA objective.</p> <p><u>Term</u></p> <p>Permanent mixed effects from the medium term.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
7. To conserve and enhance water quality and resources	-- 0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within 10m of a water body (Leeds Liverpool Canal). The Site is not likely to require the provision of new water management infrastructure.</p> <p>The former industrial use of the site could give rise to the potential of ground contamination affecting water quality should pollutants enter the canal during construction. Further assessment necessary with implementation of remediation measures to prevent pollution of the environment.</p> <p>Overall the site is considered to have a minor adverse effect on this objective.</p> <p><u>Term</u></p> <p>Minor adverse effect which is likely to be minimal with the implementation of effective mitigation measures.</p> <p><u>Mitigation</u></p> <p>Development should not take place in close proximity to the canal. Ground investigation required. Implementation of recommendations through remediation and construction works for the development of the site.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	-	<p><u>Likely Significant Effects</u></p> <p>The SFRA confirms that the Site is located in Flood Zone 1 however the Site has a high risk of flooding from ground water. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effects reducing where mitigation measures are implemented effectively.</p> <p><u>Mitigation</u></p>

Appendix 5: Assessment of Potential Housing Sites

P237 Former Barnsey Shed, Barnoldswick		
SA Objective	Score	Commentary
		<p>Adoption of the SuDs hierarchy to manage surface water drainage from the site. Suitable and sufficient storage on flood water with source at site to prevent increase in flood risk elsewhere. Development of only the northern section of the site would largely address this issue.</p> <p>Assumptions None.</p> <p>Uncertainties Site specific detail to be assessed at the planning application stage.</p>
9. To improve air quality.	0	<p>Likely Significant Effects The Site is located in excess of 500m of the Colne AQMA. The Site is unlikely to significantly contribute to air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p>Term Neutral effects over the plan period.</p> <p>Mitigation Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p>Assumptions None</p> <p>Uncertainties Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0	<p>Likely Significant Effects The site has a suitability score of 3.87. The site therefore has a neutral effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p>Term Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p>Mitigation Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p>Assumptions None.</p> <p>Uncertainties Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse,	-	<p>Likely Significant Effects The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p>

recycle, recover) and ensure the sustainable use of natural resources.				<p>Term Permanent loss where developed.</p> <p>Mitigation To be determined in consultation with Lancashire County Council.</p> <p>Assumptions Site does not provide a commercially attractive or viable site for extraction.</p> <p>Uncertainties None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	+	<p>Likely Significant Effects</p> <p>The proposal is located within 100m of a locally designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species. The site formerly featured industrial buildings and is made up of improved grassland. It is now heavily overgrown.</p> <p>The Site is not located within the Green Infrastructure network but is adjacent to the Leeds and Liverpool Canal, and its development could complement this corridor which the provision of high quality and accessible open space.</p> <p>Overall the proposal is considered to have a likely neutral effect on this objective.</p> <p>Term Minor adverse effect possible during construction phase reducing to neutral in the medium to long term as mitigation measures establish.</p> <p>Mitigation Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0			<p>Likely Significant Effects</p> <p>The Site is located adjacent to the Leeds Liverpool Canal which is noted for its industrial heritage value. The site in its current form does not contribute to this environment. The development of the site is unlikely to be affect the historic environment and as a result will have a neutral effect for this objective.</p> <p>Term Likely permanent neutral effects</p> <p>Mitigation None.</p>

Appendix 5: Assessment of Potential Housing Sites

P237 Former Barnsey Shed, Barnoldswick		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The previously developed nature of the sites means it does not contain features considered to be important or reflective of those of this LCA though land nearby has a more significant role. The development of the Site is unlikely to harm the LCA. The Site is located to south east of Barnoldswick, running along the eastern side of the Leeds and Liverpool Canal. Silentnight is a major manufacturing site which dominates the environment is located to the west. Modern residential development lies to the north. The effects of this however are limited given the absence of any local built or landscape designations in the area and the prominence of existing built form and acknowledging the previously developed nature of the site. The overall effect is considered to be neutral.</p> <p><u>Term</u></p> <p>Any likely adverse effects most significant during construction and the early years of the development reducing over time as development integrates into its surroundings and mitigation measures mature.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for economic objectives owing to the associated benefits brought by new homes in supporting the wider economy. There are positive benefits for transport objectives noting the site's proximity to public transport services and absence of local highway capacity issues affecting the site or wider network. Neutral effects are recorded for health. This balances the benefits of new homes, open space and accessibility of the site to existing sources of recreation provision against the potential adverse effects on health and wellbeing from the operations of the nearby Silentnight factory. The proposal relates to previously developed land and as such supports aims to secure the efficient use of land. There site experiences a degree of flooding which is likely to affect development capacity. The proposal is unlikely to harm the historic environment though is closely related to the Leeds and Liverpool Canal. The proposal is located in close proximity to an ecological designation and has potential biodiversity value. Equally the proposal has the potential to enhance the green infrastructure network which runs adjacent to the site. Overall the proposal is assessed as having a neutral effect for biodiversity objectives. A neutral effect is assessed for the proposal's effect on landscape effects noting the site's previously developed condition and edge of settlement location. A neutral effect is assessed for climate change objectives.</p>

		None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Lidgett and Bents Conservation Area. The scale, type and location of development is not consistent with that currently located elsewhere and contributing to the conservation area and as such the proposal is likely result in substantial harm to the historic environment. A smaller scheme reflective of the scale, density, appearance, and materials of the wider conservation area may reduce this harm somewhat. Significant adverse effects are assessed against this objective.</p> <p><u>Term</u></p> <p>Likely permanent significantly adverse effects potentially reducing with the adoption of mitigation measures. Assessment of public benefits required.</p> <p><u>Mitigation</u></p> <p>Smaller scale development, reflective in scale, density, appearance and materials of the wider conservation. High quality design and materials.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Public benefits of the proposal are unlikely to outweigh the level of harm caused (high risk).</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Rolling Upland Farmland Landscape Character Area (Zone 14b). The site displays some of the features identified as contributing to this LCA, including its relative openness, its heath-landscape, its sloping gradient, and link to agricultural buildings. The development of the site would adversely affect the LCA in this locality. The Site sits entirely within a group TPO and as such would have a significant adverse effect on this TPO if developed. The development of the Site would form a ribbon development, extending development significantly in the open countryside which is not characteristic of the wider built up area. The Site is designated Green Belt and would significantly close the existing gap between Colne and Laneshaw Bridge. The Site fulfils an integral role as part of the Green Belt in preventing coalescence of Colne and Laneshaw Bridge as confirmed within the recent Green Belt Assessment. There are no Very Special Circumstances to justify the development of the Site contrary to national planning policy. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects which cannot be reduced by mitigation.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p>

Appendix 5: Assessment of Potential Housing Sites

P241 Land north of Keighley Road, Colne				
SA Objective	Score		Commentary	
			None.	
Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health and economic objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy. Limited benefits are assessed for transport and regeneration objectives owing to the contribution of the proposal towards housing land supply and the economy and its accessibility to public transport. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. There site experiences a degree of flooding which is likely to affect development capacity. The proposal site currently supports a number of natural features which is likely to be important to wildlife. An adverse effect is assessed for the biodiversity objective. The site forms part of the Lidgett and Bents Conservation. The scale, type and location of the proposal is likely to result in substantial harm to the historic environment. Significant adverse effects are therefore assessed for this objective. The site is also located within the Green Belt. The site forms an integral part of the Green Belt preventing urban sprawl. Accounting for the assessed adverse impact on the historic environment, the proposal is considered to have a significant adverse impact on landscape/townscape objectives. Accounting for the above the proposal has a minor adverse effect for climate change objectives.

		<p>Permanent significant adverse effects which cannot be reduced by mitigation.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health, regeneration and economic objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy and the site's general accessibility to existing services, open space provision, and sources of employment. Benefits are also assessed for transport objectives noting the site's accessibility to public transport infrastructure. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be constrained by a high risk of flooding or for its biodiversity value. Further assessment will be required of both issues through the planning application process. The site is located within the Trawden Forest Conservation Area and closely relates to Winewall, a distinctive, small settlement in the borough. The proposal will significantly alter the character and setting of Winewall and is disproportionate in scale to the existing settlement. The proposal sits on steeply sloping land is highly visible to a large area. It is green belt and is found to meet the purposes of the Green Belt. Significant adverse effects are for landscape and heritage objectives. The site has a neutral effect on climate change objectives.</p>

		<p>contributing to this character area. The Site sits in an isolated location within the open countryside, representing development of an inappropriate scale, type and location. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u> Permanent significant adverse effects from the medium term. The effects identified are unlikely to be reduced through the implementation of mitigation measures.</p> <p><u>Mitigation</u> None</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal has little benefit for health, regeneration and economic objectives owing to the site's relative inaccessibility to most services, facilities and sources of employment. This isolation counters the direct benefits provided by the delivery of new homes for these objectives. Positive effects are assessed for transport objectives owing to the site's accessibility to public transport and lack of local highway constraints. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be constrained by a high risk of flooding. Further assessment will be required of this through the planning application process. The site is near to a designated ecological site and may have broader biodiversity value. Further assessment of the ecological value of the site will be required. The site is near to a Grade II* Listed building and likely forms part of its setting. The proposal is likely to harm this heritage asset to some degree. A minor adverse effect is assessed for heritage objectives. The site is isolated and relates poorly to the settlement boundary of Foulridge. Whilst the site benefits from relatively strong natural boundaries, the proposal is assessed to have a significant adverse effect for landscape objective. Overall, taking the above into account, a minor adverse effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P262 Land adjacent to Winewall Lane, Trawden		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The site is located within the industrial foothills and valleys local landscape character area. The site fulfils a local contribution towards this character area which extends beyond its boundaries. The site sits on steeply sloping land adjacent to Winewall though is relatively well contained. Winewall is a small settlement with a distinctive character. The site is visible to a wider area. It is designated Green Belt and contributes strongly to the prevention of urban sprawl and safeguarding the open countryside. Significant adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects which cannot be reduced by mitigation.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due improvements provided by the proposals to the quality and diversity of housing stock locally. The proposal also has benefits for health, regeneration and economic objectives owing to the associated benefits brought to health by access to quality housing and role new homes have in supporting the wider economy and the site's general accessibility to existing services, open space provision, and sources of employment. Benefits are also assessed for transport objectives noting the site's accessibility to public transport infrastructure. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be constrained by a high risk of flooding or for its biodiversity value. Further assessment will be required of both issues through the planning application process. The site is located within the Trawden Forest Conservation Area and closely relates to Winewall, a distinctive, small settlement in the borough. The proposal will alter the character and setting of Winewall. The proposal sits on steeply sloping land is visible to the wider area. The site is designated green belt and is found to meet the purposes of the Green Belt. Significant adverse effects are for landscape objectives whilst adverse effects are assessed for heritage objectives – the reduced effect is due to the limited scale of the proposal and its containment by existing development. The site has a neutral effect on climate change objectives.</p>

SA Objective	Score	Commentary
		<p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Rolling Upland Farmland Character Area (Zone 14b). The Site is considered part of the transitional landscape from the low valley to rising moorland to the east, and affords views from Earby of this landscape. The Site contributes to this landscape character area providing a large open area, which features dry-stone wall boundaries. Connectivity with wider open areas are limited somewhat by the vegetated route of Mill Lane to the east. Some harm will be experienced to the LCA at a local level if developed. The Site is located adjacent Earby Conservation Area. Whilst outwith the conservation area the site is likely to form part of its setting. The development represents a major extension of Earby into the open countryside. The scale of development proposed also conflicts with that in this part of the conservation area, departing from the form of development and its character. The proposal would also remove any inward and outward views of the conservation area from Stoney Bank Road. The proposal is highly visible from the east including from high ground although this would be seen in the context of existing relatively modern development. The proposal would remove existing westward views obtained from the Pendle Way which runs along the site's eastern boundary. Accounting for the above a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Likely significant adverse effect with potential reduction with mitigation measures.</p> <p><u>Mitigation</u></p> <p>A reduced scale development removed from the conservation area Reflective in scale, density, appearance and materials of the wider conservation. High quality design and materials. Views and routes through the site from Stoney Bank Road.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are significant positive effects for housing objectives due significant increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits economic, health and regeneration objectives due to the benefits provided by new homes towards these objectives enabling access to quality housing which meets the needs of their occupiers and enhances the quality of the built environment. The site's accessibility and scale providing scope for new open space and enhanced pedestrian connectivity also supports these objectives. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is relatively free from flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The site's scale and location close to an existing watercourse provides scope to secure successful biodiversity measures on site. The site is closely related to the Earby Conservation Area. The Earby Conservation Area has rural ties in this location and its built form is quaint and of small scale cottages. The proposal for 200 dwellings is inconsistent with this context, resulting in a significant urbanising effect and likely harm. A minor adverse effect is found for historic environment objective. The proposal is visible from higher ground to the east and the Pendle Way, altering the character and form of the setting and public views of the site. The site has natural and man-made features which are characteristic of the Landscape Character Area within which it is located. A minor adverse effect is assessed for the proposals effect on the landscape. In view of the above, a neutral effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P264 Land off Stoney Bank Road, Earby (Phase 2)		
SA Objective	Score	Commentary
		<p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within Earby Conservation Area. The proposal represents a major development within the Conservation Area significantly altering the character of the area in contrast to the form of development found within the conservation area in this part of the settlement. The proposal would significantly extend the built up area of Earby into the open countryside and is highly visible from surrounding roads and PROW. Less than substantial to substantial harm is likely to arise from the proposal. Noting the site's close relationship to the Conservation Area and important buildings and streetscenes located within the proposal is assessed to have a significant adverse effect for this objective.</p> <p><u>Term</u> Likely significant adverse effect with reduced impact possible with mitigation measures.</p> <p><u>Mitigation</u> A reduced scale development. Reflective in scale, density, appearance and materials of the wider conservation. High quality design and materials. Boundary treatment along eastern boundary.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Rolling Upland Farmland Character Area (Zone 14b). The Site is considered part of the transitional landscape from the low valley to rising moorland to the east, and affords views from Earby of this landscape. The Site contributes to this landscape character area providing a large open area, which features dry-stone wall boundaries. Connectivity with wider open areas are limited somewhat by the vegetated route of Mill Lane to the east. Some harm will be experienced to the LCA at a local level if developed. The Site is located adjacent Earby Conservation Area. Whilst outwith the conservation area the site is likely to form part of its setting. The development represents a major extension of Earby into the open countryside. The scale of development proposed also conflicts with that in this part of the conservation area, departing from the form of development and its character. The proposal would also remove any inward and outward views of the conservation area from Stoney Bank Road. The proposal is highly visible from the east including from high ground although this would be seen in the context of existing relatively modern development. The proposal would remove existing westward views obtained from the Pendle Way which runs along the site's eastern boundary. Accounting for the above a minor adverse effect is assessed for this objective.</p>

Appendix 5: Assessment of Potential Housing Sites

P264 Land off Stoney Bank Road, Earby (Phase 2)		
SA Objective	Score	Commentary
		<p><u>Term</u> Likely significant adverse effect with potential reduction with mitigation measures.</p> <p><u>Mitigation</u> A reduced scale development removed from the conservation area Reflective in scale, density, appearance and materials of the wider conservation. High quality design and materials. Views and routes through the site from Stoney Bank Road.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due significant increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits economic, health and regeneration objectives due to the benefits provided by new homes towards these objectives enabling access to quality housing which meets the needs of their occupiers and enhances the quality of the built environment. The site's accessibility pedestrian connectivity also supports these objectives. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to flood risk and so the scale and layout of the development will need to be designed around this constraint ensuring the proposal does not increase on and off site flood risk for all sources accounting for the effects of climate change. The proposal is located to the water channel of Earby Beck, potentially requiring engineering works to shore up existing banking and prevent their collapse. It is unclear what role the site has for biodiversity requiring further assessment. The site's scale and location close to an existing watercourse provides scope to secure successful biodiversity measures on site. The site is located within Earby Conservation Area. The Earby Conservation Area has rural ties in this location and its built form is quaint and of small scale cottages. The proposal is inconsistent with this context, resulting in a significant urbanising effect and likely harm. A significant adverse effect is found for historic environment objective. The proposal is visible from higher ground to the east and the Pendle Way, altering the character and form of the setting and public views of the site. The site has natural and man-made features which are characteristic of the Landscape Character Area within which it is located. A minor adverse effect is assessed for the proposals effect on the landscape. In view of the above, a neutral effect is assessed for climate change objectives.</p>		

P266 Land North East of Kelbrook Road (Lower Park Farm, Meadow Park), Barnoldswick		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++	<p><u>Likely Significant Effects</u> The Site has capacity for 140 dwellings including affordable housing. The proposal will significantly diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a significant positive effect for this policy objective.</p> <p><u>Term</u> Permanent significant positive effects from the medium term</p> <p><u>Mitigation</u></p>

		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Public benefits of the proposals outweigh the harm identified to the historic environment (medium risk).</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site contributes to the qualities of this LCA with complex landforms and vegetated boundaries rising from the canal. The Site also affords views out to land which contributes significantly to this LCA. The loss of the site would harm the LCA at a local level. The proposal would significantly extend the built up area of Barnoldswick south and eastwards to the Leeds Liverpool Canal. In this way the proposal would round off the settlement using the canal as a distinct settlement boundary. The development would be highly visible to the east which likely adverse effects on the landscape. Adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Likely adverse effect unlikely to be reduced much by mitigation measures.</p> <p><u>Mitigation</u></p> <p>Suitable buffer and boundary treatment works to the Canal. Provision of green routes through the development to break up the form of development providing a reduced density development on the edge of the settlement and safeguarding views through the site.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are significant positive effects for housing objectives due significant increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits economic, health and regeneration objectives due to the benefits provided by new homes towards these objectives enabling access to quality housing which meets the needs of their occupiers and enhances the quality of the built environment. The site's accessibility and pedestrian connectivity also supports these objectives. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to flood risk and so the scale and layout of the development will need to be designed around this constraint ensuring the proposal does not increase on and off site flood risk for all sources accounting for the effects of climate change. It is unclear what role the site has for biodiversity requiring further assessment. The site is adjacent to an existing ecological designation and therefore its development has the potential to adversely affect this designation. The site is near to listed buildings potentially forming part of their setting. The proposal will alter this setting potentially resulting in less than substantial harm. An adverse effect is found for the historic environment objective as a result. The proposal is visible from wider areas including public routes and positively contributes to the special forms and features of the landscape character area. Its loss to development would result in an adverse effect on the local landscape resulting in adverse effects for this objective. A minor positive effect is assessed for climate change objective.</p>

12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0
	0		<p><u>Likely Significant Effects</u></p> <p>The Site is not located within 500m of any national/international ecological site nor within 100m of any locally designated site. It is uncertain whether the site contained protected species. The Site does not contain any priority habitats the Site is an urban site. Development of the site would not affect the Green Infrastructure Network but is adjacent to existing greenspace and could enhance access to this.</p> <p>There is potential within the site to provide biodiversity net gain measures within the site. The implementation of these measures is likely to reduce developable area and would affect site viability. Overall, taking into account the above, the proposal is likely to have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Neutral effects with potential for minor positive effects with implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Open space and landscaping. The Site has the potential to connect to and enhance the local green infrastructure network running to the east. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development. Development will need to avoid being in close proximity to the local ecological asset located adjacent to the site to the west with sufficient off-set and biodiversity enhancement measures put in place to reduce any potential adverse effects.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Success and management of open space and biodiversity measures. Low-medium risk. Effect of BNG on viability of development – High Risk.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p><u>Likely Significant Effects</u></p> <p>The Site is not affected by heritage assets and as a result will have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P267 Land at Former LCC Depot, Halifax Road, Brierfield		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the industrial urban landscape. The proposal site is currently overgrown potentially detracting from the wider urban environment. The site does not therefore make a positive contribution this character area. The redevelopment of the Site gives rise to the opportunity to remove this and enhance the wider area. A minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Likely permanent positive effects with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>High quality development with sufficient boundary treatment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: This urban site scores positively for measures of townscape quality, securing the reuse of land, climate change, supporting regeneration and public transport objectives. The proposal also scores positively for housing and employment objectives owing to the benefits brought by new housing in providing increased choice and access to housing and support provided existing business and services. Limitations in viability means that the proposals effects for these objectives are more limited than otherwise could be. The proposal is relatively unaffected by flood risk and drainage. The proposal is not located near to an existing watercourse and as such does not raise pollution concerns for water quality despite being previously developed. BNG requirements may render the site unviable. The proposal scores neutrally for other objectives.</p>

SA Objective	Score	Commentary
		<p><u>Term</u> Permanent significant adverse effects which cannot be mitigated.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are significant positive effects for housing objectives due significant increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The limited accessibility of the site means that associated benefits of housing delivery towards economic, health and regeneration objectives are almost nil with a neutral effect for these objectives observed. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to a high degree of risk form flooding from surface water. Ensuring this is adequately addressed is likely to affect site capacity. An adverse effect is assessed for flooding objectives. The site is subject to a local ecological designation and is known to be heavily used by protected species. A significant adverse effect is assessed for biodiversity objectives. The proposal is in an isolated location in the countryside poorly related to the wider urban area. It has natural and man-made features which are characteristic of and significantly contribute towards the quality of the landscape character area. A significant adverse effect is assessed for landscape objectives. Taking account of the above, a minor adverse effect is assessed for climate change objectives.</p>

				<u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The proposal is not located within 100m of a locally designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved grassland. The Site is located adjacent to the Green Infrastructure network. Its development is unlikely to adversely affect this network. Overall the proposal is considered to have a likely neutral effect on this objective. <u>Term</u> Potentially adverse effects during construction period, with neutral effects longer term. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
	0			
13. To conserve and enhance the historic environment, heritage assets and their setting.	--			<u>Likely Significant Effects</u> The Site is located within the Trawden Forest Conservation Area. The site sits on steeply sloping ground and its development would alter the character of the local area being highly visible from the wider village and parish area. The proposal is of substantial scale and does not relate well to the existing settlement. Taking this into account a significant adverse effect is assessed for this objective. <u>Term</u> Likely permanent significant adverse effects potentially reducing in their degree with the adoption of mitigation measures. Assessment of public benefits required. <u>Mitigation</u> Smaller scale development, reflective in scale, density, appearance and materials of the wider conservation. High quality design and materials. <u>Assumptions</u> None <u>Uncertainties</u> Public benefits of the proposal are unlikely to outweigh the level of harm caused (medium risk).

Appendix 5: Assessment of Potential Housing Sites

P269 Joe Meadow and Little Wood, Trawden		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site sits within the Industrial Foothill character area. The site in its current form makes a contribution to the character area on a localised scale, however its influence extends beyond the site boundaries, with the site contributing positively to the setting of Trawden. The site relates poorly to the wider development pattern, and relates to a steeply sloping land. The site is highly visible from a wide range of viewpoints including public routes. Its development would result in irreversible significant damage to the character and appearance of the area resulting in significant adverse effects for this objective.</p> <p><u>Term</u></p> <p>Effects of proposal likely to be most significant in the shorter term during the construction with the effects potentially reducing to a limited degree in the longer term.</p> <p><u>Mitigation</u></p> <p>Sensitive design responses to local landform and architecture. Siting, scale, appearance of development and role of landscaping. A much smaller scale of development.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the contribution made by the proposal to housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. The site is accessible to some services, however local employment opportunities are limited. As a result the site has a neutral effect for regeneration and economic objectives notwithstanding the positive contribution new housing makes towards fulfilling these objectives. Neutral effects are also assessed for transport objectives noting the sites proximity to a regular bus service and highway accessibility problems which may render the proposal undeliverable. The proposal has positive effects for health objectives due to the accessibility of the site to existing healthcare and open space provision as well as opportunities for new open space within the site boundaries. The site is undeveloped and as such has adverse effects for the making efficient use of land and use of natural resources. The site is relatively unconstrained in terms of flood risk. Further assessment is needed to evidence the effect this might have on site suitability/deliverability. The site is not known to be of ecological value with further assessment required. The Site is located within a conservation area and is likely to result, noting its scale, visibility and poor relationship with the wider settlement, in significant adverse effects for heritage objectives. For the same reasons the site is assessed as having a significant adverse effect for landscape objectives. Overall a minor positive effect is assessed for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P272 Land at the end of Park Avenue, Nelson				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 15 dwellings. The proposal will help to diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Low viability means that the proposal is unlikely to provide any affordable housing. However notwithstanding this, it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Low viability may restrict the range of housing types and sizes likely to come forward at the site.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	+	0	<p><u>Likely Significant Effects</u></p> <p>The development site is not currently used for employment.</p> <p>The Site is located within 2,000m of the nearest major employment site (Lomeshaye).</p> <p>The proposal does not involve the loss or provision of education facilities.</p> <p>Some economic benefits would arise as a result of the proposal with the investment provided by the development, short to medium term support of jobs in the construction sector and value added by residents increasing the labour supply, contributing to the economy and spending locally. Accounting for the above, on balance, it is considered that the proposal would have a minor positive effect for this objective.</p> <p><u>Term</u></p> <p>A minor positive neutral effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Use of sustainable modes of transport to access employment. Medium risk.</p>

13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result is likely to have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located outside but adjacent to the settlement boundary. The site is currently undeveloped and open in character. The proposal would irreversibly alter this aspect. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Minor adverse effect reducing with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Boundary treatments. Layout and form of development. Open Space to break up development and reduce its visibility. Development should be in conjunction with P068.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. Minor positive effects are assessed for economic objectives due to the site's accessibility to strategic employment opportunities. The is however of limited accessibility to local services, including schools provision, and as such is likely to result in the need to travel by car. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to a significant risk of flooding and therefore does not represent a suitable location for housing. It is unclear what role the site has for biodiversity requiring further assessment. The site does not affect the historic environment. The site is currently open and undeveloped. Its development will irreversibly alter the built form in the area resulting in an adverse effect for the local landscape. A neutral effect is assessed for climate change objectives however the site is not suitable for housing noting the high degree of flood risk which affects the site.</p>

Appendix 5: Assessment of Potential Housing Sites

P273 Land north of Barnoldswick Road, Kelbrook				
SA Objective	Score		Commentary	
Summary: There are minor positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. Neutral effects are assessed for economic and regeneration objectives due to the site's relative isolation from strategic employment sites. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The site is adjacent to an existing ecological designation and therefore its development has the potential to adversely affect this designation. The site does not affect the historic environment. The proposal is visible from wider areas including public routes and positively contributes to the special forms and features of the landscape character area. It is isolated from Kelbrook requiring further land to come forward first. Its loss to development would result in an adverse effect on the local landscape resulting in adverse effects for this objective. A neutral effect is assessed for climate change objectives.

SA Objective	Score		Commentary
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	<p>Likely Significant Effects</p> <p>The site is located within 100m of locally designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved grassland.</p> <p>The Site is not located within the Green Infrastructure network. Its development would adversely affect this network.</p> <p>Overall the proposal is considered to have a likely minor adverse effect on this objective.</p> <p>Term</p> <p>Minor adverse potentially reducing with the implementation of mitigation measures.</p> <p>Mitigation</p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p>Likely Significant Effects</p> <p>The Site is unlikely to be affected by heritage assets and as a result is likely to have a neutral effect for this objective.</p> <p>Term</p> <p>Likely permanent neutral effect.</p> <p>Mitigation</p> <p>None.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-		<p>Likely Significant Effects</p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site makes a minor contribution to this LCA forming the lower slopes of a drumlin. The Site itself is comprised of large open agricultural fields. However its development would give some harm to the wider LCA given its potential visibility from wider public routes and the change caused to the local landscape. The Site forms a large protrusion of development within the open countryside which is poorly related to the wider settlement of Barnoldswick. The development would be somewhat visible from public routes including public routes along the Leeds Liverpool Canal. A minor adverse effect is assessed, with potential for this to reduce if the site is developed in conjunction with P237.</p> <p>Term</p> <p>Minor adverse reducing with mitigation in the medium to long term and if developed with P237.</p>

Appendix 5: Assessment of Potential Housing Sites

P274 Land to South East of Long Ing Lane, Barnoldswick		
SA Objective	Score	Commentary
		<p><u>Mitigation</u> Boundary treatments. Layout and form of development. Open Space to break up development and reduce its visibility.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. Positive effects are also assessed for economic and regeneration objectives owing to the site's accessibility to Barnoldswick Town Centre and other strategic employment sites and the contribution may be the proposals towards the local economy. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The site is adjacent to an existing ecological designation and therefore its development has the potential to adversely affect this designation. The site also forms part of the green infrastructure network. The development of the site could reduce the value of this network in this location. An adverse effect is assessed for biodiversity objectives. The site does not affect the historic environment. The proposal is visible from wider areas including public routes and makes a limited contribution to the special forms and features of the landscape character area. The proposal would protrude into the open space and would not relate well to existing built form increasing the adverse effects caused by its development on the open countryside and existing landscape. The proposal has a minor adverse effect on landscape objectives. A minor positive effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P277 Former Waterworks and Quarry, Salterforth		
SA Objective	Score	Commentary
		None.
14. To conserve and enhance landscape character and townscapes.	-	<p>Likely Significant Effects</p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site itself does not reflect the features of this LCA being previously subject to intensive activity. The development of housing on the site however would harm the character of the wider landscape. The Site is isolated within the open countryside. Its development will adversely affect the local landscape, views, and character. A minor adverse effect is assessed.</p> <p>Term</p> <p>Permanent minor adverse effects.</p> <p>Mitigation</p> <p>Scaling, layout, type and amount of development. Use of natural materials for construction. Comprehensive landscaping scheme required.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
<p>Summary: There are minor positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The site's isolated location nullifies wider benefits of health and wellbeing and the contribution made to the economy. In addition adverse effects are assessed for regeneration and transport objectives. The proposal relates to land which has previously been developed and as such the proposal supports aims to secure the efficient use of land. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity though the site is being reclaimed by nature. Further assessment is required. The site does not affect the historic environment. The site is in an isolated location and is not suitable for the development of a major residential scheme. Whilst the proposal does not reflect the quality of the character area, its development will be visible from wider areas. Accounting for this an adverse effect is assessed for this objective. The proposal has a minor adverse effect for climate change objectives due to its isolated location.</p>		

P278 Land off Rylstone Drive and Pen-y-ghent Way, Barnoldswick		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++	<p>Likely Significant Effects</p> <p>The Site has capacity for 170 dwellings including affordable housing. The proposal will significantly help to diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a significant positive effect for this policy objective.</p>

Appendix 5: Assessment of Potential Housing Sites

P278 Land off Rylstone Drive and Pen-y-ghent Way, Barnoldswick				
SA Objective	Score			Commentary
<p>Summary: There are significant positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also assessed for the economy noting the support extra patronage and labour supply could have for local employers. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site’s accessibility to existing open space provision, and compatibility with existing land used. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The proposal is located within a conservation area and could alter the character of this part of the conservation area affecting wider views and public enjoyment of the conservation area resulting in at least less than substantial harm. A minor adverse effect is assessed for this objective. The proposal relates to a large tract of land at an edge of settlement location and is visible from wider areas including public routes. The site makes a limited contribution to the special forms and features of the landscape character area but does form part of a wider conservation area. The proposal has a minor adverse effect on landscape objectives. A minor positive effect is assessed for climate change objectives.</p>

13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p><u>Likely Significant Effects</u></p> <p>The site is not located near any designated heritage assets however is located adjacent to the historic core of the village and an important urban character area as identified within the Kelbrook Neighbourhood Plan. Development of this scale and pattern is not likely to be compatible with the character of the settlement resulting in at least less than substantial harm for the historical environment. Minor adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Likely permanent adverse effects.</p> <p><u>Mitigation</u></p> <p>Adaptation of design, form, density and appearance of the development to reflect the unique built and natural features of the existing village.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Degree of harm caused, and whether the harm will be outweighed by the public benefits of the proposal (Medium risk).</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site isn't considered to contain features which contribute to this LCA but does contain features and forms part of a wider landscape characteristic of the Rolling Upland Farmland LCA (Zone 14b) with harm likely if developed. Whilst the site relates well to the existing settlement, its scale and location would not reflect the historic and built character of the settlement resulting in adverse effects. This is especially the case noting the highlighted importance of this part of the village for providing a high quality urban environment. PROW follows the eastern boundary of the Site. Developing the Site would therefore change the experience and character of this PROW. An adverse effect is assessed with mitigation measures.</p> <p><u>Term</u></p> <p>Adverse effects possibly reducing in the medium to long term with mitigation measures.</p> <p><u>Mitigation</u></p>

Appendix 5: Assessment of Potential Housing Sites

P281 Land to rear of Main Street/Waterloo Road, Kelbrook		
SA Objective	Score	Commentary
		<p>Potential reduce scale of development. Boundary treatments with sufficient offset to listed building and PROW. High quality development built of local materials.</p> <p>Assumptions None</p> <p>Uncertainties Degree of harm caused, and whether the harm will be outweighed by the public benefits of the proposal (Medium risk).</p>
<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems. Neutral effects are assessed for economic and regeneration objectives largely to the limited service provision accessible within and from Kelbrook. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The proposal is situated within the historic core of Kelbrook in an area of noted valued by the Kelbrook Neighbourhood Plan. Development of the type and scale proposed is likely to harm this historic area of Kelbrook altering its character. As a consequence it is assessed that the proposal would have harmful effects for both historic and landscape/townscape objectives. A minor positive effect is assessed for climate change objectives.</p>

SA Objective	Score	Commentary
		<p>development of the Site would change the character of the local area from rural to urban. The Site is designated Green Belt and is found to contribute critically to its purposes within the recent Green Belt assessment. As such the release of the land for housing would not be consistent with national planning policy. No very special circumstances case is known to exist to justify the development of the Site. The proposal is considered to have a significant adverse effect on this objective which cannot under current circumstances be mitigated.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects.</p> <p><u>Mitigation</u></p> <p>None</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. The proposal has a neutral effect transport objectives owing to its accessibility by public transport set against local constraints within the highway network which affect highway capacity and safety. Neutral effects are assessed for economic and regeneration objectives largely to the limited service provision accessible from the site and is reflective of the wider general accessibility limitations of the site promoting car usage. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The proposal is unlikely to affect the historic environment. The site is located at the edge of Higherford in a relatively elevated location. This gives rise to views from the wider area to the east including Barrowford Locks. The site itself is relatively well related to the settlement pattern and its scale would not be disproportionate for the settlement, noting its position within the settlement hierarchy and accessibility to existing services. The proposal is however designated Green Belt and maintains a key role in preventing urban sprawl and safeguarding the open countryside by urban encroachment. A significant adverse effect is assessed for the landscape objective. A neutral effect is assessed for climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P285 Land at Brownley Park Farm, Blacko		
SA Objective	Score	Commentary
		<p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p>Assumptions None.</p> <p>Uncertainties None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p>Likely Significant Effects</p> <p>Blacko is a linear settlement with stone built terraces and cottages. The village sits along Gisburn Road which is set within a hilly landscape. A distinct feature within this landscape is Blacko Tower, a folly. Whilst not listed, this building is locally significant and visible from a far. The development of the site would significantly alter the character and form of the village, removing its traditional layout, and substantially changing the setting of Blacko Tower. At least less than substantial affects are likely arise, however if the entirety of the site was to be developed then this harm would increase. The overall effects assessed for this objective are minor adverse.</p> <p>Term Likely permanent minor adverse effects</p> <p>Mitigation A more limited site capacity closely related to existing built form is likely to reduce the harm assessed.</p> <p>Assumptions None</p> <p>Uncertainties The level of harm caused by the proposal on the historic environment and whether the public benefits associated with the site's development would outweigh the harm caused (medium to high risk).</p>
14. To conserve and enhance landscape character and townscapes.	--	<p>Likely Significant Effects</p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site is considered to function strongly towards this LCA occupying the lower slopes of land rising towards Blacko Tower and beyond that Weets. Its development would represent a significant loss to the LCA within the local area and from areas with visibility of the Site. The Site would have a significant urbanizing effect the development would have on the area in contrast to existing development, and the considerable break from the settlement pattern which would result in a form of the settlement which is unlike the remainder of the village. The elevated position of the site (and village) will make the development highly visible from large parts of the Borough including important sites within the AONB, public highway and PROW. A significant adverse effect is assessed, reducing to adverse if the proposal was reduced substantially in scale and form.</p> <p>Term Likely significant adverse effects with limited reduction as a result of mitigation measures.</p> <p>Mitigation</p>

Appendix 5: Assessment of Potential Housing Sites

P285 Land at Brownley Park Farm, Blacko		
SA Objective	Score	Commentary
		<p>Small scale, proportionate expansion of the village consistent with the pattern of development. High quality design and use of local materials reflecting the appearance of the wider village. Boundary treatment works to reduce intervisibility. Open space to break up the development and retain the ribbon like pattern of the settlement.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are positive effects for housing objectives due to the large increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Wider benefits beyond housing objectives are limited. This is due to the limited accessibility of the site to existing services and facilities promoting car travel and reduce the local benefits of new homes on health, regeneration, and economic objectives. Adverse effects are assessed for transport objectives noting the absence of a frequent bus service operating in close proximity to the site and congestion/highway safety issues caused by on-street parking which is likely to be exacerbated by the proposal. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity requiring further assessment. The proposal is unlikely to affect the historic environment. Blacko is a linear settlement which is of limited scale and sustainability. The proposal is not conducive to this context and is likely to have a significant adverse effect on the local landscape and townscape noting its elevated position and location close to the Forest of Bowland Area of Outstanding Natural Beauty. The incompatible nature of the proposal with built form also harms the historic environment of Blacko and particular that of Blacko Tower which sits atop of a local summit north of the site, with the proposal forming part of its setting. An adverse effect is assessed for the historic environment objectives as a result. The limited accessibility of the site promoting unsustainable modes of transport significantly contributes towards the finding of a minor adverse effect assessed for climate change objectives.</p>		

P286 Land off Cuckstool Lane, Brierfield		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 10 dwellings. The proposal will help to diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u> Permanent minor positive effects from the medium term</p> <p><u>Mitigation</u> Planning obligations for the mix of housing</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> The proposal is located close to an area which has low viability. Market demand may be weak (Low-medium risk).</p>

Appendix 5: Assessment of Potential Housing Sites

P286 Land off Cuckstool Lane, Brierfield		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys (Zone 6a). The Site functions strongly towards this LCA, formed of sloping land, with strong vegetated boundaries, and close to isolated rural buildings. The Site relates reasonably poorly to the existing settlement pattern, protruding significantly into the open countryside with significant harm to the character of the Site. The Site occupies an elevated location which is prominent from Brierfield, and located on the S bends – a well-known location locally. The Site is visible from the public highway and PROWs. Its development will alter significantly the character of the area which feels rural having crossed the motorway/river/canal. The Site is designated Green Belt and is found to contribute crucially to its purposes within the recent Green Belt assessment. As such the release of the land for housing would not be consistent with national planning policy. No very special circumstances case is known to exist to justify the development of the Site. The proposal is considered to have a significant adverse effect on this objective which cannot under current circumstances be mitigated.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the large increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Some positive effects are identified for economic and regeneration objectives. This is largely due to the proposals proximity to the M65 corridor and employment opportunities and businesses located within, and added support the proposal will have for these areas through increase expenditure and larger labour supply. The proposal is assessed as having a neutral effect on health. This is due to the proximity of the site to the M65 motorway and the health concerns this raises from air pollution and noise. The proposal has adverse effects for transport due to the site's limited accessibility to public transport opportunities thereby promoting travel by car. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to a degree of risk of flooding which will need to be addressed through the site's design potentially affecting its capacity and viability. The site does not contribute towards the historic environment. The site forms part of the Green Infrastructure Network. Its development may adversely affect this network resulting in a negative effect for biodiversity objectives. The site shows strong functionality within the landscape contributing positively to its quality in its current form. The site fulfils an important role in prevent urban sprawl and safeguarding the open countryside from development as part of the Green Belt. For these reasons the proposal is assessed to have a significant adverse effect for landscape objectives. The site is assessed to have a neutral effect for climate change objectives.</p>

		<p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	+	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Trawden Forest Conservation Area. In its current condition the proposal site does not contribute towards the built qualities of this area and in a limited way detracts from this area. The proposal has the potential to benefit the conservation area removing an industrial site of relatively modern functional appearance from the streetscene. The proposal is likely to have a minor positive effect for this objective.</p> <p><u>Term</u> Initial neutral effects with potential for positive effects in the medium to long term.</p> <p><u>Mitigation</u> High quality development using materials and architecture which reflects those important buildings in the wider conservation area.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> A positive effect is achieved for the conservation area (low risk)</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys (Zone 6a). The Site shows very limited functionality towards this local landscape character area noting its built modern and functional form. The redevelopment of the site for housing is unlikely to harm the landscape character area notwithstanding the visibility of the site from public vantage points. The site is currently development and is contained and relates well to the built up area. A neutral effect is assessed for this objective.</p> <p><u>Term</u> Permeant neutral effects likely.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P287 Whiteholme Mill, Trawden				
SA Objective	Score		Commentary	
<p>Summary: There are positive effects for housing objectives due to the large increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The site is in employment use and therefore its redevelopment to housing would result in the loss of employment land. Adverse effects are therefore assessed for the site's effect on employment objectives. Neutral effects are identified for regeneration objectives. This is due to the relatively limited accessibility of the site to existing services, being located almost between settlements. Some positive effects are identified for health objectives noting the site's accessibility to health infrastructure and open space. Positive effects are also assessed for transport objectives given the accessibility of the site to public transport provision and the absence of highway constraints affecting the site. The site is previously developed and as such makes a positive response towards effective use of land objectives. The site is near to an existing watercourse, giving rise to concerns of the potential for water contamination. The site is subject to a high risk of flooding. This constraint may render the site unsuitable for housing. The site is not known for its biodiversity value, however further surveys will be necessary. A neutral effect is assessed for biodiversity objectives. The site is located within the Trawden Forest Conservation Area and in its current condition does not contribute positively towards this designation. The redevelopment of the site gives rise to the opportunity for enhancements to be made to the quality of the built environment, resulting in positive effects for heritage objectives. The redevelopment of the site is unlikely to harm or enhance the local landscape. A neutral effect is assessed for landscape objectives. The proposal is assessed to have a neutral effect for climate change objectives.</p>

<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Some positive effects are identified for economic and regeneration objectives due to the proximity of the site to existing sources of employment and services. The proposal is assessed as having a neutral effect on health. This is due to the proximity of the site to the Rolls Royce Bankfield Site and the health concerns this raises from air pollution and noise. The proposal has minor positive effects for transport due to the site's accessibility to public transport opportunities. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is not known to experience a significant risk of flooding and does not contribute towards the historic environment. The site forms part of the Green Infrastructure Network, is adjacent to a designated site and features protected habits. Its development is likely therefore to adversely affect biodiversity. Whilst undeveloped the site sits on a contained site within the settlement boundary. It does not contribute to the setting of Barnoldswick or reflect the landscape qualities of the wider landscape character area. The site is assessed to have a neutral effect for landscape/townscape objectives. An overall neutral effect is assessed for the proposal's effects on climate change objectives.</p>

Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p>

Appendix 5: Assessment of Potential Housing Sites

P289 Land South of Keighley Road (Site 1), Laneshaw Bridge				
SA Objective	Score			Commentary
				<p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p> <p><u>Uncertainties</u> None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	-	0	<p><u>Likely Significant Effects</u> The site is located within 100m of a locally designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved and semi-improved grassland. There is some semi-natural broadleaved woodland within the Site – a priority habitat. The Site located adjacent to the Green Infrastructure Network. Its development would not adversely affect this network. Overall the proposal is considered to have a likely negative effect on this objective.</p> <p><u>Term</u> Negative most significant in the short term with the potential to reduce in the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<p><u>Likely Significant Effects</u> The Site is located opposite a couple of listed buildings and may form part of the setting and obstruct views of the listed building to open countryside to the south. The listed buildings are however within an existing settlement and have themselves been redeveloped for housing. The proposal is also proportionate in scale to the settlement. The Site is also located in close proximity to the Trawden Forest Conservation Area and as such may hold some link to this area which might be adversely effected by the development of the Site. Less than substantial harm is considered likely to arise as a result of the proposal on the historic environment. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u> Likely significant adverse effects.</p> <p><u>Mitigation</u> Development should be respectful and representative of its village setting and be of a scale and density which reflects its semi-rural location. Local and high quality materials should be used, with boundaries treated carefully to minimise any adverse effect.</p>

Appendix 5: Assessment of Potential Housing Sites

P289 Land South of Keighley Road (Site 1), Laneshaw Bridge		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>Whether public benefits associated with the proposal will outweigh the level of harm identified to the historic environment.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site sits within the Rolling Upland Farmland Landscape Character Area. The features and qualities of the Site don't reflect or contribute towards this LCA. Whilst the Site is proportionate in scale, and works with the settlement pattern of Laneshaw bridge, the Site is designated Green Belt, and recently found to continue to contribute to the purposes of the Green Belt. Its development would therefore be inconsistent with national planning policy. No very special circumstances exist to justify the development of the Site. As such the proposal has a significant adverse effect for this objective which is not currently capable of being mitigated.</p> <p><u>Term</u></p> <p>Likely significant adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the large increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also identified for transport objectives owing to the site's accessibility to public transport and the absence of highway capacity issues locally. The limited range of services, shops and employment opportunities in the village mean that the proposal has a neutral effect on health, economic and regeneration objectives. Some positive effects are identified for economic and regeneration objectives. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is found to have a role for local wildlife and is located in close proximity to a designated site. The development of the proposal may adverse effect biodiversity objectives. The site also located close to existing listed buildings and forms part of their setting. These buildings however sit within the wider settlement context and have been converted to domestic use. Less than substantial harm is considered likely and as a result a minor adverse effect is assessed for the historic environment objective. The site sits on the edge of Laneshaw Bridge on undeveloped land. The site is of limited scale and size and relates well with the existing urban form providing a large infill site within the settlement pattern. The proposal site is however part of the wider Green Belt and has recently been found to contribute to Green Belt purposes. For this reason a significant adverse effect is assessed for landscape objectives. The limited accessibility of the site means that the site is assessed to have a minor adverse effect for climate change objectives.</p>

		<p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result is likely to have a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site is largely contained by existing development and isolated from wider landscape which contributes towards the LCA. Little harm to the LCA is likely to occur as a result of the site's development. The Site is proportionate in scale to the settlement of Salterforth and would provide for a logical rounding off of the settlement in this location. The Site is not designated, nor would it affect any designated heritage asset. The site is visible to a number of public vantage points including a PROW which runs along the eastern boundary of the Site. The PROW is currently in open countryside and development of the Site would alter the character and experience along this route. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Potential minor adverse effect reducing to a limited extent in the medium to long term with mitigation.</p> <p><u>Mitigation</u></p> <p>Development offset from the PROW to be retained. Open space adjacent to PROW to retain some sense of openness and a semi-rural route.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P291 Land east of Hayfields, Salterforth		
SA Objective	Score	Commentary
<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also identified for economic objectives owing to the site's accessibility to existing employment opportunities and contribution provided by the development of the site to the local economy. The relative accessibility of the site to existing service provision (largely within Barnoldswick) will aid the vitality of this centre serving to promote regeneration objectives. Benefits are also recorded for transport objectives owing to the site's accessibility to public transport and the absence of highway capacity issues locally. Neutral effects are assessed for health objectives due to the limited scope for open space provision on site and added pressure created by the development on healthcare facilities. Countering this is the health and wellbeing benefits provided by the provision of new, quality housing. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to some flooding which will have to be addressed through the detailed design process potentially affecting overall capacity. The site is located in close proximity to a designated site. The development of the proposal may adversely affect biodiversity objectives and further assessment of biodiversity constraints is necessary. The proposal is unlikely to affect the historic environment. The site is relatively well contained by existing development and makes only a limited contribution to the qualities of the landscape character area within which the proposal is located. The proposal will result in an urbanising effect and permanent loss of undeveloped land to housing. The site is visible from public routes and will alter to some degree the experience had when travelling along these routes. A minor adverse effect is assessed for the proposals effect on landscape objectives. Overall a neutral effect is assessed for climate change objectives.</p>

		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area. The Site fulfils a limited function within this LCA noting current natural features. However it is material that the wider parcel of land to the north and west (which in its current form fulfills a more significant role for the LCA than this site) will soon be developed for housing (as part of Trough Laithe). The Site will then be isolated from the wider countryside. No harm to the LCA is envisaged. The Site adjoins the built up area of Barrowford. Whilst the proposal would close the gap between Barrowford and Nelson, it must be noted that the Site is already allocated for offices with Trough Laithe strategic housing site to the north and west already closing this gap once developed. The proposal would not therefore adversely affect the local landscape or lead to the coalescence of settlements. Potential sensitivity from PROW along Pendle Water and the settlement boundary to be dealt with through mitigation measures. Overall a neutral effect is assessed based on the context provided by the Core Strategy.</p> <p><u>Term</u></p> <p>Likely neutral effect in the medium to long term with mitigation.</p> <p><u>Mitigation</u></p> <p>Development offset from the river and PROW. High quality design, boundary treatments, public open space and green corridors to be agreed with the Council.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P294 Land north of Riverside Way, Barrowford		
SA Objective	Score	Commentary
<p>Summary: There are significant positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also identified for health objectives owing to the site's connectivity to open space and healthcare provision and scope for new space provided within the site. Countering this to some degree is health risks associated with pylons which run through the site and will require the implementation of suitable offset measures. Whilst the site is closely related to the built up area it is some distance to some services and facilities reducing the site's score for certain objectives. The site is allocated for employment use within the Pendle Core Strategy. Its development for housing would conflict with adopted policy and serves to result in adverse effects for economic and regeneration objectives. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to high risk of flooding from nearby Pendle Water which is modelled to render much of the site undevelopable. The SFRA recommends that the site is unsuitable for housing. A significant adverse effect is assessed for this objective. The proposal has a largely uncertain effect for biodiversity. The site is within the urban area however closely relates to a river corridor. It is likely that the site has some significance for wildlife. Further study of this potential constraint is necessary. The proposal is unlikely to affect the historic environment. The site is located in an area of Pendle which is subject to change with major developments taking place locally. This will transform the local landscape and introduce a significant amount of urban development. Taking this into account it is assessed that the proposal would have a neutral effect on landscape objectives. Overall a minor adverse effect is assessed for climate change objectives this is largely due to the significant degree of flood risk assessed for the site.</p>

		Site specific detail to be assessed at the planning application stage.
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The Site is unlikely to contribute significantly towards air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	-	<p><u>Likely Significant Effects</u> The site has a suitability score of 2.52. The site therefore would have a minor adverse effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations. The low score identified for this proposal is associated with the likely environmental effects of developing the site for housing.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor adverse effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p>

Appendix 5: Assessment of Potential Housing Sites

P296 Land at Barden Lane Stables, Barden Lane, Brierfield				
SA Objective	Score			Commentary
				<u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	--	--	-	<u>Likely Significant Effects</u> The site contains a locally designated site and its development is likely to have a significant adverse effect on this designation. The Site is the Round Wood Swamp BHS. The site is predominantly improved grassland with some continuous dense scrub and mire with bryophyte-dominated springs. The Site is located within the Green Infrastructure Network. The proposal is likely to have an adverse effect on the Green Infrastructure network owing to the extent of the loss caused by the development of the Site. Overall the proposal is considered to have a likely significant adverse effect on this objective. <u>Term</u> Significant adverse effect unlikely to be reduced by mitigation given that the Site is a BHS. <u>Mitigation</u> None available. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	0			<u>Likely Significant Effects</u> The Site is unlikely to be affected by heritage assets and as a result the proposal is assessed to have a neutral effect on this objective. <u>Term</u> Likely permanent neutral effects <u>Mitigation</u> None. <u>Assumptions</u> None <u>Uncertainties</u> None.
14. To conserve and enhance landscape character and townscapes.	--			<u>Likely Significant Effects</u> The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site contains features which contribute to this LCA and the setting of the settlement, this includes changes in topography, discrete woodland, a network of public footpaths and hedgerows. Local harm is likely to arise to the LCA if developed. The Site relates poorly to the settlement pattern extending development significantly in the open countryside which would be highly visible from PROW which run along the Leeds

Appendix 5: Assessment of Potential Housing Sites

P296 Land at Barden Lane Stables, Barden Lane, Brierfield		
SA Objective	Score	Commentary
		<p>Liverpool Canal and Pendle Water. Development would extend up to and include Round Wood significantly altering and adversely affecting the local landscape. The Site is designated as Green Belt and recently found to fulfil an important role for the purposes of the Green Belt. The development of the Site would not be consistent with national Green Belt policy. There are no Very Special Circumstances to justify the development of this site. The proposal is therefore considered to have a significant adverse effect on this objective which cannot be mitigated.</p> <p><u>Term</u> Permanent significant adverse effect.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are significant positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also identified for health objectives owing to the site's connectivity to open space and scope for new space provided within the site, coupled with the health benefits associated with the provision of new housing. Positive effects are also recorded for transport objectives noting the site's proximity to public transport routes and absence of highway capacity issues locally. The site is relatively distant to existing strategic employment areas resulting in neutral and adverse effects for economic and regeneration objectives respectively. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to some risk of flooding from nearby Pendle Water likely to affect site capacity, and is located close to the Leeds and Liverpool Canal with the potential to affect this waterway. Adverse effects are assessed for flooding and water infrastructure objectives. Part of the site is a designated biodiversity site and the site is in close proximity to further biodiversity designations. Existing evidence shows that the site has importance for protected species. The site also forms part of Pendle's green infrastructure network. Taking this into account significant adverse effects are identified for biodiversity objectives for this proposal. The proposal is unlikely to affect the historic environment. The site contains a number of natural features which contributes positively to the local landscape character area. The site is highly visible to public routes including the Leeds and Liverpool Canal. The site forms part of the designated Green Belt and is found to fulfil the purposes of the Green Belt, in particular preventing urban sprawl and safeguarding the open countryside. The proposal therefore has a significant adverse effect for landscape objectives. Accounting for the above, and largely as a result of the significant environmental constraints affecting the proposal, the site is assessed to have a minor adverse effect for climate change objectives.</p>

14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site is not considered to display characteristics which contribute to this LCA, it does however reflect some of the features noted for the Rolling Upland Farmland Landscape Character Area (Zone 14b), and functions within the transitional landscape between the valley floor and rising landscape. Harm to this LCA is likely if developed. The Site is isolated from Kelbrook and would result in a major development of the countryside. The proposal is not of a suitable scale or type for its location and would significantly adversely affect the open countryside. Development of the Site alongside P004 may make for a more logical development however would still adversely to significantly adversely affect the open countryside and would represent a development which is not proportionate to and consistent with the form of Kelbrook.</p> <p><u>Term</u></p> <p>Likely significant adverse effect, reducing slightly if developed alongside P004.</p> <p><u>Mitigation</u></p> <p>Development alongside P004 may reduce adverse effects to a limited degree.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P297 The Stables, Old Stone Trough Lane, Kelbrook				
SA Objective	Score			Commentary
<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Limited service provision is available nearby, and the site is not located within walking distance of nearby strategic employment sites. The site is in a countryside location and supporting infrastructure is limited to accommodate the development. Limited scope exists within the site to provide new open space and services. Accounting for this neutral effects are assessed for health, transport, regeneration and economic objectives. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to some risk of flooding by surface water which could affect site capacity. Adverse effects are assessed for flood risk objectives. The proposal is not known to be affected by biodiversity constraints, however further detailed assessment is required. A neutral effect is assessed for this objective. The proposal is located in the open countryside in a transitional area between the valley floor and upland areas which rise to the east of the site. The proposal site is isolated from Kelbrook. Its development would constitute significant urban sprawl into the open countryside which is poorly related to the settlement pattern. A significant adverse effect is assessed for landscape. A minor positive effect is assessed for climate change objectives.</p>

12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	0
	-		<p><u>Likely Significant Effects</u></p> <p>The site is located within 100m of locally designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly amenity grassland.</p> <p>The Site is adjacent to the Green Infrastructure network. Its development is unlikely to adversely affect this network.</p> <p>Overall the proposal is considered to have a likely adverse effect on this objective.</p> <p><u>Term</u></p> <p>Adverse effect reducing from the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result it is assessed that the proposal is likely to have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	--		<p><u>Likely Significant Effects</u></p> <p>The site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site does not contain features which contribute strongly towards the qualities of this LCA. Little harm is likely to result to the LCA as a result of the site's development. The Site forms a large protrusion of development within the open countryside which is poorly related to the wider settlement of Kelbrook. The development would be highly visible from public routes including PROW. A significant adverse effect is assessed, reducing to adverse if developed in conjunction with P068/P273.</p> <p><u>Term</u></p> <p>Significant adverse reducing with mitigation and if developed with P068.</p>

Appendix 5: Assessment of Potential Housing Sites

P298 Land to the rear of Craven Heifer, Kelbrook		
SA Objective	Score	Commentary
		<p><u>Mitigation</u></p> <p>Boundary treatments. Layout and form of development. Open Space to break up development and reduce its visibility. Development should be in conjunction with P068/P273.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Limited service provision is available nearby, and the site is not located within walking distance of nearby strategic employment sites. Accounting for this neutral effects are assessed for regeneration and economic objectives. The site is however served by public transport with little highway constraints likely to affect the development. A minor positive effect is assessed for transport objectives. The site is accessible to existing open space and there is the potential to expand this provision through additional open space provided on site. New homes have benefits for health and wellbeing. Overall a positive effect is assessed for health objectives. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. There is potential given the site's close proximity to an existing watercourse that the proposal may affect the integrity of this channel. Safeguarding measures may be required. The site is not known to be affected by flooding, however further assessment will be required. The site is close to a designated site and has the potential to affect this designation. Further detail about the site's ecological role and value is at this stage unknown, and requires further assessment. Adverse effects are assessed for biodiversity objectives. The proposal is not known to affect the historic environment. The proposal is located in the open and does not contain the features which contribute to the local landscape character area. The site however poorly relates to the settlement pattern of Kelbrook magnifying its effects on the wider open countryside. A significant adverse effect is therefore assessed for landscape objectives. Overall a neutral effect is assessed for climate change objectives.</p>

14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site contributes significantly to this character area at a local and neighbourhood level, providing a sloping agricultural landscape transitional in its nature to the Pennines Moorlands which is open and consists of dry-stone walled boundaries. Some vegetation exists along boundaries and within fields. The development of the Site would potentially cause considerable harm to the LCA at the local level. The Site protrudes significantly into open countryside and relates poorly to the built up area of Harle Syke in neighbouring Burnley BC to the south. The Site is crossed by a number of public right of ways with substantial changes to the views, character and experience had from these footways. The Site is in an elevated position and highly visible from the south. The Site is locally valued owing to its recreational value. A significant adverse effect is assessed, capable of reducing to adverse with mitigation measure.</p> <p><u>Term</u></p> <p>Significant adverse reducing to a limited extent with mitigation measures.</p> <p><u>Mitigation</u></p> <p>Development should be confined to the southern parts of the Site to relate more closely with existing and approved development adjacent to Harle Syke. Boundary treatments. Layout and form of development. Open Space to break up development and reduce its visibility.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P303 Land South of Nelson Golf Course, Brierfield		
SA Objective	Score	Commentary
<p>Summary: There are significant positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. Positive effects are also assessed economic objectives noting the accessibility of the site to local employment opportunities and scale of the proposal's contribution to the economy. The proposal has neutral effects for health, this reflects the benefits associated of new housing development towards health and wellbeing balanced against the adverse effects of increased pressure on service provision and the removal of a large area of valued informal local space. Adverse effects as assessed for regeneration objectives noting the pressure provided by the proposal on existing service capacity without new provision proposed. Neutral effects are assessed for transport objectives noting the site's accessibility to public transport routes as well as wider services balanced against the scale of the proposal and likely effect on the wider highway network. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site has some risk of flooding which may affect site capacity. A minor adverse effect is assessed for flooding objectives and further assessment will be required. The proposal is not known to affect the historic environment. The site relates to a large expanse of land which has ecological and recreational value. The site is nearby to the South Pennines SPA. The scale of the proposal and its proximity may result in pressure on this international designation. Further assessment of this is requirement which suitable and sufficient offset measures required were the site to come forward for a planning application. In the absence of more detailed information regarding this relationship and the effects caused on this designation a minor adverse effect is assessed for biodiversity objectives. The proposal makes a significant contribution to local landscape quality and forms the setting of Brierfield and Burnley. It provides an important and valued break in the urban area. The proposal site is highly visible from the south including an extensive network of well use public routes. Its development would represent a major incursion into the open countryside. Noting this, it is assessed that the proposal will have a significant adverse effect on landscape objectives. Accounting for the above, a negative effect is assessed for climate change objectives.</p>		
P304 Land West of Colne Road, Earby		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 210 dwellings including affordable housing. The proposal will make a significant contribution to housing land supply helping to diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Accounting for the above it is concluded that the proposal will have a significant positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent significant positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

SA Objective	Score	Commentary
		Site specific detail to be assessed at the planning application stage.
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The Site is unlikely to contribute significantly towards air quality problems. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	-	<p><u>Likely Significant Effects</u> The site has a suitability score of 3.43. The site therefore would have a minor adverse effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor adverse effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-	<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p>

Appendix 5: Assessment of Potential Housing Sites

P304 Land West of Colne Road, Earby			
SA Objective	Score		Commentary
			<u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	0
	-		<u>Likely Significant Effects</u> The site is located within 100m of locally designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved grassland. The Site is adjacent to the Green Infrastructure network. Its development is unlikely to harm this network. Overall the proposal is considered to have a likely minor adverse effect on this objective. <u>Term</u> Minor adverse effect reducing towards a Neutral effect from the medium to long term with the implementation of mitigation measures. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<u>Likely Significant Effects</u> The Site is unlikely to be affected by heritage assets and as a result is likely to result in a neutral effect on this objective. <u>Term</u> Likely permanent neutral effects <u>Mitigation</u> None. <u>Assumptions</u> None <u>Uncertainties</u> None.
14. To conserve and enhance landscape character and townscapes.	--		<u>Likely Significant Effects</u> The Site is located within the Drumlin Field Landscape Character Area. At a site level some features reflect the qualities of the LCA such as rising topography and vegetated boundaries, however the role of the Site within the LCA is reduced significantly by its containment by existing development. The proposal would result in the coalescence of two separate settlements Earby and Sough, creating a single linear settlement extending from Kelbrook in the south. The proposal would provide for significant adverse change to the local character and identity of the area. Significant harm is identified.

Appendix 5: Assessment of Potential Housing Sites

P304 Land West of Colne Road, Earby		
SA Objective	Score	Commentary
		<p><u>Term</u> Permanent significant harm.</p> <p><u>Mitigation</u> Any development south of Earby would reduce significantly the small but important gap between Earby and Sough and so mitigation is not possible.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: There are significant positive effects for housing objectives due to the increase of housing stock provided by the proposal and resultant improvements provided to the quality and diversity of housing stock locally. The proposal also benefits health objectives due to the benefit of the provision of new homes in supporting health and wellbeing, the site's accessibility to existing open space provision, and compatibility with existing land used. Positive effects are also assessed for economic objectives owing to the site's accessibility to strategic employment opportunities and the contribution made by the proposals towards the local economy. The site is beneficial for transport objectives owing to its accessibility to services and public transport and absence of local congestion problems though the scale of the proposal raises the potential for highway congestion to occur requiring further assessment. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The proposal site is affect by flood risk to a degree and this is likely to affect site capacity. Further assessment is required to understand the extent and degree of this constraint and its effect on the proposal. An adverse effect is assessed for flooding objectives. The site is close to a designated site. Its development has the potential to adversely affect this designation. It is unclear what role the site has for biodiversity requiring further assessment. Overall a minor adverse effect is assessed for the proposal's effect on biodiversity objectives. The proposal is unlikely to affect the historic environment. The site makes some contribution towards the specific natural qualities of the local landscape character area. The value of the proposal to the overall area is reduced by the site's relationship to existing development. Development of the site would result in coalescence of two separate settlements creating a linear settlement extending to Kelbrook. The proposal would result in irreversible significant and adverse change to the character and identity of these settlements. Overall the proposal is assessed to have a minor adverse effect on climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P305 Land at Harpers Lane, Fence		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The site forms part of the transitional landscape located between the Calder Valley and Pendle Hill, and provides a clear boundary to the village of Fence (a dense but reasonably small settlement within the LCA). The Site is considered to contribute significantly to this LCA within the locality and from wider views. Its development could cause considerable harm to the LCA. The Site represents a significant extension of the built form of Fence which fails to reflect the existing pattern of development (being linear on an SW to NE axis). The proposal would result in a major development at an elevated and highly visible position above the village. It would also bring the village closer to the AONB which lies just to the north and may affect its setting. A group TPO is located within the north western part of the site and would be significantly adversely affected by the development of the Site. The Site is designated Green Belt, and recently found to have a major contribution to the Green Belt purposes within the Green Belt review. The release of the site for development would therefore conflict with national planning policy. There are no very special circumstances under which to allow the development of the Site. Overall a significant adverse effect which could not be mitigation under current circumstances.</p> <p><u>Term</u></p> <p>Permanent significant adverse effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has significant positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment due to the relative inaccessibility of employment locally at strategic sites. The site has limited benefits for regeneration and transport objectives due to limited connectivity of the site to existing services and facilities (reflecting its location adjoining a rural service centre) and constraints in the highway network experienced within the settlement. Positive effects are found for health objectives noting the site's accessibility to open space provision, scope for enhanced open space provision and health benefits associated with the delivery of new housing. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has a minor adverse effect for flooding objectives noting the assessed level of flood risk for the site potentially requiring a reduce capacity. The site's role for ecology is unknown requiring further assessment in this regard. The proposal is unlikely to affect the historic environment. Significant adverse effects are assessed to arise from the proposal for landscape objectives. The site is assessed to significantly contribute to the Landscape Character Area within which it is located. The proposal sits on a rising landscape which is visible from the wider area. The proposal does not respect and reflect the settlement pattern of Fence and its development will affect its setting and character The proposal is designated green belt and found to have a major contribution to Green Belt purposes. Overall the site is assessed to have a minor adverse effect for climate change objectives.</p>

SA Objective	Score		Commentary
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	-	Likely Significant Effects The Site is located within 400m from one or more transport services. No known congestion issues locally. Access issue to resolve over the railway and up to Colne Road (street not wide enough). In addition the access from Colne Road is not safe potentially requiring its signalling. The development would not support investment in, or result in the loss of transport infrastructure and services. Accounting for the above, the proposal is assessed as having a likely neutral effect for this objective. Term A neutral effect from the medium term with implementation of mitigation measures. Mitigation Investment in cycle storage and pedestrian and cycle links may be required. Resolve narrow access point over railway. Assumptions None. Uncertainties None.
	0		
6. To encourage the efficient use of land and conserve and enhance soils.	-		Likely Significant Effects The Site is greenfield but not known to comprise Best and Most Versatile Land (BMV). Minor adverse effect assessed. Term Permanent minor adverse effects. Mitigation None. Assumptions None. Uncertainties None.
7. To conserve and enhance water quality and resources	0	0	Likely Significant Effects The Site is not located within 50m of a watercourse or water body The development will not require an upgrade to water management infrastructure. The proposal is unlikely to affect water quality. Overall the site is considered to have a neutral effect on this objective. Term Permanent neutral effect. Mitigation

		None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result is likely to have a neutral effect for this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site forms part of the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The site contributes at a localised level to this LCA given the site features of a sloping agricultural field contained by existing vegetated boundaries. The site is however very well contained and so its role within the wider LCA is negligible. The proposal is proportionate and relates well to the existing settlement and built up area and features contained by existing residential development to the north, the Colne branch line to the east and the Leeds Liverpool Canal to the west. The Site is open in its current form with long distant views available from the Site. Some harm is identified given that there are PROW running through the site and along Robinson Lane which would have their outlook dramatically altered by the development of the Site. Harm is limited by the fact that the site would be seen in the context of the wider settlement from other areas.</p> <p><u>Term</u></p> <p>Likely adverse effects reduced somewhat over the longer term by mitigation measures.</p> <p><u>Mitigation</u></p> <p>PROW retained in situ with sufficient open space alongside to maintain some sense of openness, green corridors through the Site should be considered to maintain any key views.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P306 Land off Robinson Lane, Reedley		
SA Objective	Score	Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site's proximity to existing sources of employment and services and the role the site will have in contributing to the local economy. The site is accessible to existing open space provision and there is potential to enhance this. New homes will improve access to quality housing which meets the needs of their occupiers benefiting health objectives. The site is accessible to high quality public transport provision, however is not currently safety or sufficiently accessible by vehicles. This is a major barrier to the development of the site for housing. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has a minor adverse effect for flooding objectives noting the assessed level of flood risk for the site potentially requiring a reduce capacity. The site is in close proximity to an existing ecological designation and its development could adversely affect this. The site's wider role for ecology is unknown requiring further assessment in this regard. A minor adverse effect is assessed for ecological objectives. The proposal is unlikely to affect the historic environment. The proposal makes a very limited contribution to local landscape character noting its containment by strong natural and man-made features and relationship to the existing settlement. The outlook had from existing public routes running adjacent to the site would be transformed. A minor adverse effect is assessed for the effect of the proposal on landscape objectives. Overall the site is assessed to have a neutral effect on climate change objectives.</p>

Appendix 5: Assessment of Potential Housing Sites

P307 Land off Keighley Road, Colne		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Industrial Urban Character Area. The Site does not reflect the character of this area and is more akin to the Industrial Foothills and Valleys LCA (Zone 6a) within which it fulfils a local contributions within the semi-industrial South Valley of Colne. The development of this site could have a local adverse effect on this LCA. The proposal sites relates broadly well to the existing built up area of Colne and largely respects the character and pattern of development the settlement. The Site is located on a steep slope which is visible to the south for the southern side of South Valley. The development would however largely be seen in the context of the wider settlement. An exception may be the scale of development and size of the extension proposal which is not as well contained, and sees development protrude more southwards than otherwise seen locally. The development of the entirety of the Site would also bring development close to the public right of way which follows Colne Water at the bottom of the valley, affecting views and aspect from this public route. The development could also reduce the tranquillity and character of the cemetery which is located adjacent to the site to the west. A minor adverse effect is assessed which could be mitigated to almost neutral with suggested mitigation measures.</p> <p><u>Term</u></p> <p>Initial adverse effects reducing in the longer term.</p> <p><u>Mitigation</u></p> <p>Development should not extend further southwards than existing development to the east, and the extent of the cemetery to the west. Boundary treatment along the southern and western boundaries would reduce the effects and visibility of the site from further afield.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has significant positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site's proximity to existing sources of employment and services and the role the site will have in contributing to the local economy. The site is accessible to existing open space provision and there is potential to enhance this. New homes will improve access to quality housing which meets the needs of their occupiers benefiting health objectives. The site is accessible to public transport provision and is unlikely to worsen congestion problems. A minor positive effect is assessed for transport objectives. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal has a minor adverse effect for flooding objectives noting the assessed level of flood risk for the site potentially requiring a reduce capacity. The site features habitats which are likely to be used by protected species. The development of the site may disrupt protected species. Further assessment required. A minor adverse effect is assessed for ecological objectives. The proposal is unlikely to affect the historic environment. Whilst well related to the existing settlement pattern, the site sits on undeveloped sloping land and is highly visible from undeveloped land rising steeply from Colne Water to the south. The site forms part of the setting of Colne, however would be seen within the context of wider existing development if built. A minor adverse effect is assessed for this objective. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

SA Objective	Score			Commentary
				<p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	-			<p><u>Likely Significant Effects</u> The Site is located within a Mineral Safeguarding Zone, and as a result is considered to have a minor negative effect on this objective.</p> <p><u>Term</u> Permanent loss where developed.</p> <p><u>Mitigation</u> To be determined in consultation with Lancashire County Council.</p> <p><u>Assumptions</u> Site does not provide a commercially attractive or viable site for extraction.</p> <p><u>Uncertainties</u> None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<p><u>Likely Significant Effects</u> The site is not located within 100m of a designated site. It is unclear whether the Site fulfils an important role for protected species. The Site consists primarily of improved grassland. The Site is not located within the Green Infrastructure network. Overall the proposal is considered to have a likely neutral effect on this objective.</p> <p><u>Term</u> Neutral effect from the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u></p>
	0			

Appendix 5: Assessment of Potential Housing Sites

P308 Land at Carry Lane, Colne		
SA Objective	Score	Commentary
		None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The Site is unlikely to be affected by heritage assets and as a result the proposal is assessed as likely having a neutral effect on this objective.</p> <p><u>Term</u></p> <p>Likely permanent neutral effects</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Industrial Urban Character Area. The Site does not reflect the character of this area and is more akin to the Industrial Foothills and Valleys LCA (Zone 6a) within which it fulfils a local contributions within the semi-industrial South Valley of Colne. The development of this site could have a local adverse effect on this LCA. The proposal sites relates broadly well to the existing built up area of Colne and largely respects the character and pattern of development the settlement. The Site is located on a steep slope which is visible to the south for the southern side of South Valley. The development would however largely be seen in the context of the wider settlement. A minor adverse effect is assessed which could be mitigated to almost neutral with suggested mitigation measures.</p> <p><u>Term</u></p> <p>Initial adverse effects reducing in the longer term.</p> <p><u>Mitigation</u></p> <p>Boundary treatment along the southern and eastern boundaries would reduce the effects and visibility of the site from further afield.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P308 Land at Carry Lane, Colne				
SA Objective	Score			Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site’s proximity to existing sources of employment and services and the role the site will have in contributing to the local economy. The site is accessible to existing open space provision and there is potential to enhance this. New homes will improve access to quality housing which meets the needs of their occupiers benefiting health objectives. The site is accessible to public transport provision and is unlikely to worsen congestion problems. A minor positive effect is assessed for transport objectives. The proposal relates land which is greenfield and as such has adverse effects for use of resources and making efficient use of land. The proposal not known to be significantly affected by flood risk however this needs further detailed study. Similarly the site is not known to be subject to ecology constraints, however this also requires further assessment. The proposal is unlikely to affect the historic environment. Whilst well related to the existing settlement pattern, the site sits on undeveloped sloping land and is visible from undeveloped land rising steeply from Colne Water to the south. The site forms part of the setting of Colne to a limited degree, however would be seen within the context of wider existing development if built. A minor adverse effect is assessed for this objective. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

		<p>site is not listed, within a conservation area, is of limited quality and within a built context which is largely of modern residential or commercial.</p> <p><u>Term</u> Likely minor adverse effects reducing over time.</p> <p><u>Mitigation</u> Photographic record of existing buildings to ensure that history of site is captured in the longer term. Efforts should be made to educate about the history of the site. Development should seek to the industrial heritage of Barnoldswick and particularly the canal corridor where possible.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Consideration of public benefits of the proposal against the assessed level of harm.</p>
14. To conserve and enhance landscape character and townscapes.	+/-	<p><u>Likely Significant Effects</u> The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site comprises of developed/previously development employment land and as such does not contribute towards this LCA. The proposal site is located within the built up area of Barnoldswick. The site is currently used for employment, and is of limited built quality, and large parts of the site vacant or underused. Whilst the Site doesn't necessarily detract from the wider area, its redevelopment does present the opportunity to enhance the character and quality of the area, enabling a broader range of uses which extend beyond working hours. Such a proposal could also enable for an improved frontage along the Leeds Liverpool Corridor, enhancing this as a recreational route through the town. Noting the potential historical importance of the site, and the adverse effects caused by the proposal to the historic environment, mixed effects are assessed for this objective.</p> <p><u>Term</u> Initial adverse effects likely to turn positive in the longer term once the development is completed. Overall mixed effects are assessed from the proposal.</p> <p><u>Mitigation</u> Existing greenery on site should be incorporated and expanded through the design of the redevelopment. The setting of the canal should be enhanced with greater accessibility.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P309 Land at Ouzledale Foundry, Long Ing Lane, Barnoldswick		
SA Objective	Score	Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site's proximity to existing sources of employment and services and the role the site will have in contributing to the local economy. A neutral effect is found for the reuse of employment land noting proposals to relocate existing premises to an undeveloped area of 'white land' to the north of the site with the southern part being redeveloped for housing. The site is accessible to existing open space provision and there is potential to enhance this. New homes will improve access to quality housing which meets the needs of their occupiers benefiting health objectives. The site is accessible to public transport provision and is unlikely to worsen congestion problems. A minor positive effect is assessed for transport objectives. The proposal relates land which is previously developed and as such has significant positive effects for use of resources and making efficient use of land. The proposal is closely related to the Leeds and Liverpool Canal and there is a culverted watercourse running through the site. The proposal has the potential to affect the structural integrity of these watercourses and water quality found within. Adverse effects are found for this objective. The site is subject to a degree of flood risk. Minor adverse effects are found for this objective. The proposal site is adjacent to a designated ecological site. Its development could adversely affect the integrity and quality of habitats in this designation. The proposal site has unknown value for protected species, existing structures may be used by bats. Further assessment and surveys are required. The site is adjacent to the green infrastructure network. The proposal has the potential to connect with this network. Overall the proposal has a minor adverse effect for biodiversity objectives. The site early 20th century industrial landscape set alongside the Leeds and Liverpool Canal. The proposal would retain only the four storey element of this, converting this to residential use. The loss of these buildings and the setting provided would result in at least less than substantial harm to the historic environment. An adverse effect is assessed for the effect of the proposal on the historic environment. The site does not reflect the characteristics of the local landscape character area. The proposal will have mixed effects for townscape character with improvements to degenerated parts of the site in industrial use and those sites which are vacant. An adverse effect is likely where buildings of noted industrial heritage are lost. The effects are not directly off-set as they are different and so mixed effects are assessed for this objective. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

		<p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-/+	<p><u>Likely Significant Effects</u></p> <p>Redevelopment of the site is likely to have a mixed effect on this objective. Whilst the site is not located within the Earby Conservation Area and is not listed, the current form of the building as a mill is of some heritage value and relates to the recent industrial history of the town. The mill features a Weaving Shed – one of the few remaining in Earby. The form of built development on the site is unlikely to be conducive for residential developing given the large floor space. The southern half of the site is a tarmacked car park which detracts from the mill and the wider environment. The redevelopment of this part of the site for housing would make better use of land and could enhance the urban environment. A mixed effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Any likely adverse effects most significant during construction and the early years of the development reducing over time as development integrates into its surroundings and mitigation measures mature.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities. Existing vegetation should remain on site as far as possible. Retention/reflection of key mill features within the development. Development should be directed as far as possible to the existing parking area.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site's proximity to existing sources of employment and services, the proposal to redevelop previously developed land and the role the development will have in contributing to the local economy. The site is accessible to existing open space provision and there is potential to enhance this. New homes will improve access to quality housing which meets the needs of their occupiers benefiting health objectives. The site is accessible to public transport provision and is unlikely to worsen congestion problems. The proposal not known to be significantly affected by flood risk however this needs further detailed study. Similarly the site is not known to be subject to ecology constraints, however this also requires further assessment noting the potential existing buildings and structure might have in supporting protected species. Less than substantial harm to the historic environment is considered likely noting the site's location close to Earby Conservation Area and presence of existing mill buildings on site which are unlikely to be suitable for conversion to new homes without extensive demolition. The site in its current form contributes to the identity and character of the built environment, and therefore its loss will have a negative effect. The proposal has the potential to improve and upgrade the quality and diversity of housing stock available locally making a contribution to urban quality. Its redevelopment would prevent a vacant site falling into disrepair ensuring that the site does not degrade the wider area. Mixed effects are therefore assessed for the proposals effect on townscape objectives. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

Appendix 5: Assessment of Potential Housing Sites

P312 Land at Barrowford Road, Higham		
SA Objective	Score	Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment and regeneration objectives noting the site's distance to existing sources of employment and services reducing the benefits provided by the development to the local economy. Adverse effects are assessed for health with the potential effects of the A6068 and lack of scope for new open space provision on the development site countering the benefits provided by new housing to health and wellbeing. Adverse effects are assessed for transport noting the limited frequency of the bus service operating through the village resulting in greater reliance on car travel. The proposal relates to previously undeveloped land and as such has adverse effects for securing the efficient use of land. The site is not known to be subject to a significant degree of flood risk however further study will be required informing the layout and capacity of the development. The proposal is located close to a designated ecological site. Its development has the potential to adversely affect this designation. The site may also benefit wildlife in its current condition. Further study is necessary to understand the degree and importance of this relationship and how to best consider its effects on the development proposal. The site is likely in the setting of a Grade II Listed building. It is assumed that the proposal will result in at least less than substantial harm to the historic environment requiring consideration of public benefits. The proposal is located at the edge of Higham, a rural village. The proposal does not relate well to the built form of the settlement however is proportionate in scale to the settlement and is relatively well contained. The role of the site within the wider landscape area is relatively limited beyond a site scale. The effects of the development on the landscape is assessed as being adverse. Accounting for the above a neutral effect is assessed for climate change objectives.</p>

		<p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Drumlin Field (13a) Landscape Character Area. The site used for heavy industrial use and has a functional appearance. It does not therefore reflect the characteristics of the local landscape character in anyway and detracts from this landscape in its current form. The site is located adjacent to a several listed buildings and structures largely associated with the Leeds and Liverpool Canal. The site in its current form is therefore likely to detract from this environment if there is any relationship. The redevelopment of the site for a less intensive use will be of benefit to the historic environment, care will however be needed for the specific design, orientation, materials and layout of new buildings constructed particularly those nearest to designated heritage assets. Whilst noting that the site is isolated from existing settlements, it is nevertheless concluded that a minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effect.</p> <p><u>Mitigation</u></p> <p>Care will be needed for the specific design, orientation, materials and layout of new buildings constructed particularly those nearest to designated heritage assets and those featuring at the boundaries of the site.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has significant positive effects for housing objectives due to the large contribution of new homes provided and the benefits provided by increasing the quality and diversity of housing stock. Adverse effects are assessed for employment objectives noting that the proposal would remove a large employment site in the borough. The site is however surplus to requirements of its owner and is available for a variety of land uses beyond housing. The proposal would have an adverse effect for regeneration objectives notwithstanding the proposal to make use of previously developed land due to the increased pressure caused by the proposal on service provision and its distance towards existing services and facilities. Positive effects for health are assessed for this objective, noting the environmental enhancement provided both immediately and in the longer term, as a result of the proposal. Positive effects are also noting for transport objectives with the site's location on a public transport route, and general absence of capacity problems locally. Positive effects are assessed for making effective use of land noting that the site is previously developed. The proposal not known to be significantly affected by flood risk however this needs further detailed study. The site is however in close proximity to the Leeds and Liverpool Canal and the former use of the site gives rise to serious concerns about the potential for the proposal to pollute this watercourse during construction works as a result of ground conditions. The Leeds and Liverpool Canal also gives rise to potential ecological constraints noting the proximity and importance of the canal corridor for wildlife. Adverse effects are assessed for biodiversity. Positive effects are assessed for heritage and landscape objectives. Whilst the site is in an isolated countryside location, its current functional appearance detracts from the wider landscape resulting in harm to the wider historic environment. The proposal provides the opportunity to enhance this environment through a carefully planned high quality development. Overall the proposal has a neutral effect for climate change objectives.</p>		

Appendix 5: Assessment of Potential Housing Sites

P314 Land off Gisburn Road, Blacko				
SA Objective	Score			Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	++			<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 130 dwellings including affordable housing. The proposal will help to diversify and improve the quality of the housing stock ensuring that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Accounting for the above it is concluded that the proposal will have a significant positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Permanent significant positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

		<p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-	<p><u>Likely Significant Effects</u></p> <p>The site is located close to Blacko War Memorial which is listed and is likely to form part of its setting. The site is also within the setting of Blacko Tower, a folly and distinctive local landmark. The development will harm both heritage assets, potentially significantly. A finding of at least less than substantial harm is assessed for the effect of the proposal on the historic environment. A minor adverse effect is assessed for this objective.</p> <p><u>Term</u> Permanent minor adverse effect potentially significant subject to confirmation through a heritage assessment.</p> <p><u>Mitigation</u> Heritage assessment required. The heritage assessment will consider the significance and setting of nearby historic features and the effects of developing the site on these assets. It is possible given the scale of the site that a small proportion may be developable without harm to this environment. However this is subject to confirmation through site specific evidence.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The site is in an elevated position above the village of Blacko. The site does not respect or reflect the linear settlement pattern which is characteristic of Blacko. The capacity of the site is disproportionate to the scale, role, and sustainability of the settlement. The site will be highly visible and prominent from most areas of the village and wider surrounds and will disrupt and adversely affect key vantage points of Blacko Tower which is a valued local landmark. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u> Permanent significant adverse effects. The effects of developing the site on this objective could potentially reduce to adverse if a much small scheme was delivered (around 10 dwellings).</p> <p><u>Mitigation</u> It is possible given the scale of the site that a small proportion may be developable without harm to this environment. However this is subject to confirmation through site specific evidence.</p>

Appendix 5: Assessment of Potential Housing Sites

P314 Land off Gisburn Road, Blacko		
SA Objective	Score	Commentary
		<p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has significant positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment and regeneration objectives noting the site's distance to existing sources of employment and services reducing the benefits provided by the development to the local economy. Neutral effects are assessed for health and wellbeing noting the benefits to health brought by the development to providing quality and diversified housing stock and the scope provided for new open space provision on the development site against the pressure provided by the development to service provision and distance accessing these services. Adverse effects are assessed for transport noting the limited frequency of the bus service operating through the village resulting in greater reliance on car travel and noted highway capacity issues on the A6068 caused by on-street parking. The proposal relates to previously undeveloped land and as such has adverse effects for securing the efficient use of land. The site is not known to be subject to a significant degree of flood risk however further study will be required informing the layout and capacity of the development. The proposal is not known for its significance for wildlife. The site may also benefit wildlife in its current condition. Further study is necessary to understand the degree and importance of this relationship and how to best consider its effects on the development proposal. The site is likely in the setting of the Grade II Blacko War Memorial and Blacko Tower. It is assumed that the proposal will result in at least less than substantial harm to the historic environment requiring consideration of public benefits. This level of harm may indeed be more significant once further details of the proposal are known. The proposal sits in an elevated position above Blacko. The site does not reflect the settlement's prevailing linear settlement pattern and represents a significant extension to the settlement which is disproportionate to its scale and role within Pendle. The site is highly visible from surrounding areas including public vantage points and will irreversibly alter the character and identity of the village. The proposal will result in harm to the historic environment. As a result significant adverse effects are assessed for the proposals effect on landscape and townscape objectives. Accounting for the above, a minor adverse effect is assessed for the proposals effect on climate change objectives. This score is applied noting the scale of the proposal and very limited accessibility to existing services, shops and sources of employment encouraging travel bar car.</p>

				<u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	0	<u>Likely Significant Effects</u> The site is not located within 100m of a designated site. It is unclear whether the Site fulfils an important role for protected species. The Site consists primarily of improved grassland. The Site is not located within the Green Infrastructure network. Overall the proposal is considered to have a likely neutral effect on this objective. <u>Term</u> Neutral effect from the medium to long term with the implementation of mitigation measures.
	0			<u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<u>Likely Significant Effects</u> Whilst the site is not located within a Conservation Area and is not listed, the current form of the building as a mill is of some heritage value and relates to the recent industrial history of the Village. The form of built development on the site is unlikely to be conducive for residential developing given the large floor space. Its demolition is likely to be required to facilitate delivery of housing at the site. At least less than substantial harm towards the historic environment is likely to arise as a result of the development. A minor adverse effect is assessed for this objective. <u>Term</u> Permanent minor adverse effect. <u>Mitigation</u> Key features unique to the mill should be retained and/or reflected through the redevelopment of the site. A photographic record should be undertaken of the mill. <u>Assumptions</u> None <u>Uncertainties</u> None.

Appendix 5: Assessment of Potential Housing Sites

P315 Land at Croft Mill, Foulridge		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-/+	<p><u>Likely Significant Effects</u></p> <p>Redevelopment of the site is likely to have a mixed effect on this objective. Whilst the site is not located within a Conservation Area and not listed, the current form of the building as a mill is of some heritage value and relates to the recent industrial history of the village. The form of built development on the site is unlikely to be conducive for residential developing given the large floor space. The proposal will however make use of a redundant site, ensuring it does not fall into a state of disrepair which would otherwise harm the quality and appearance of the wider area. A mixed effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Any likely adverse effects most significant during construction and the early years of the development reducing over time as development integrates into its surroundings and mitigation measures mature.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities. Existing vegetation should remain on site as far as possible. Retention/reflection of key mill features within the development.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment noting the site's accessibility to existing sources of employment and services. Neutral effects are assessed for regeneration and health objectives. This is owing to the limited range of services and facilities available within Foulridge resulting in the need to travel. The site is accessible to public transport provision and is unlikely to worsen congestion problems. Positive effects are assessed for making effective use of land noting that the site is previously developed. The proposal not known to be significantly affected by flood risk however this needs further detailed study. Similarly the site is not known to be subject to ecology constraints, however this also requires further assessment noting the potential existing buildings and structure might have in supporting protected species. Less than substantial harm to the historic environment is considered likely noting the presence of existing mill buildings on site which are unlikely to be suitable for conversion to new homes without extensive demolition. The site in its current form contributes to the identity and character of the built environment, and therefore its loss will have a negative effect. The proposal has the potential to improve and upgrade the quality and diversity of housing stock available locally making a contribution to urban quality. Its redevelopment would prevent a vacant site falling into disrepair ensuring that the site does not degrade the wider area. Mixed effects are therefore assessed for the proposals effect on townscape objectives. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

Appendix 5: Assessment of Potential Housing Sites

P316 Fields west of disused railway line, Barnoldswick Road, Kelbrook				
SA Objective	Score			Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for health, employment and regeneration objectives noting the site’s distance to existing sources of employment and services reducing the benefits provided by the development to the local economy. Positive effects are assessed for transport objectives noting the site’s accessibility by public transport. There are adverse effects for securing the effective use of land noting the site’s greenfield condition. The site is not known to be subject to a significant degree of flood risk however further study will be required informing the layout and capacity of the development. The proposal is located close to a designated ecological site. Its development has the potential to adversely affect this designation. Further study is necessary to understand the degree and importance of this relationship and how to best consider its effects on the development proposal. The proposal is unlikely to affect the historic environment. The site makes some contribution to the local landscape area with connectivity to land making a more important contribution towards this area located beyond. The site is in an isolated location. It is however limited in scale and contained by man-made features. Overall a minor adverse effect is assessed for this objective. A minor positive effect is assessed for climate change objectives.</p>

Development (including remediation works) to take place in accordance with recommendations for this report.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Ground works may render the proposal unviable (high risk).</p>
8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	0	<p><u>Likely Significant Effects</u> The SFRA confirms that is at a low risk of flooding from rivers and surface water. A moderate chance of flooding from groundwater affects the site. A neutral effect is assessed for this objective.</p> <p><u>Term</u> Permanent neutral effect.</p> <p><u>Mitigation</u> Careful design of development, sufficient means of surface water storage to ensure that the development does not adversely affect flood risk. Open space and landscape. Rainwater capture.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u></p>

Appendix 5: Assessment of Potential Housing Sites

P318 Former Gas Holder, Brierfield		
SA Objective	Score	Commentary
		None.
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located within of 500m of the Colne AQMA. The Site is however unlikely to contribute significantly towards air quality problems noting its limited scale and accessibility by foot and public transport. The proposal therefore has a neutral effect on this objective.</p> <p><u>Term</u> Neutral effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	<p><u>Likely Significant Effects</u> The site has a suitability score of 4.09. The site therefore would have a minor positive effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0	<p><u>Likely Significant Effects</u> The Site is not located within the Mineral Safeguarding Zone. Its development is unlikely to affect this designation. As a result is considered to have a neutral effect on this objective.</p> <p><u>Term</u> Permanent Neutral effect</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u></p>

			<p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	<p><u>Likely Significant Effects</u></p> <p>The site is located within 100m of a designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species.</p> <p>The Site is not located adjacent to and closely relates with the Green Infrastructure network.</p> <p>Overall the proposal is considered to have a likely minor adverse effect on this objective.</p> <p><u>Term</u></p> <p>Neutral effect from the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats particularly of those located close to the Leeds and Liverpool Canal. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-		<p><u>Likely Significant Effects</u></p> <p>The site is located adjacent to a listed structure, it is also located within a conservation area. There have been calls for the structure on site to be listed. The harm caused by the redevelopment of the site is dependent on the nature of the proposal taking place. The loss of the existing gas holder is likely to harm the industrial heritage of the site and will need to be considered as part of the planning balance in accordance with the policies of the NPPF. Submission states that retaining the gas holder is likely to add £5 million to the price of redeveloping the site. Overall a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent minor adverse effect.</p> <p><u>Mitigation</u></p> <p>Key features of the site should be retained and/or reflected through the redevelopment of the site where possible. A photographic record should be undertaken of the site/wider area prior to development.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 5: Assessment of Potential Housing Sites

P318 Former Gas Holder, Brierfield		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-/+	<p><u>Likely Significant Effects</u></p> <p>Industrial Age (LCC 23) character area. The site reflects the character and makes a contribution towards this character area in its current condition. The proposal would remove a large and recognizable landmark from the townscape of Brierfield potentially harming its setting. The value of the existing site is however only experienced from longer distant views as up close the site is unremarkable. The site is however in a conservation area and next to a listed building thereby forming its setting. Irreversible harm would therefore result from the development due to the change caused by the development to the built environment. At the same time some benefits could also be provided by improving the built quality and standard of buildings in the area following on from the success of the nearby Brierfield Mills Development. A mixed effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Any likely adverse effects most significant during construction and the early years of the development reducing over time as development integrates into its surroundings and mitigation measures mature.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities. Existing vegetation should remain on site as far as possible. Retention/reflection of key site features within the development where possible.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are also found for employment and regeneration objectives noting the site's accessibility to existing sources of employment and services. Adverse effects are assessed for health noting the potential harm to public health caused by the site's redevelopment. The site is accessible to a good range of services and facilities and public transport. This benefits transport objectives. Positive effects are assessed for making effective use of land noting that the site is previously developed. The proposal not known to be significantly affected by flood risk however this needs further detailed study. The site is however in close proximity to the Leeds and Liverpool Canal and the former use of the site gives rise to serious concerns about the potential for the proposal to pollute this watercourse during construction works as a result of ground conditions. The Leeds and Liverpool Canal also gives rise to potential ecological constraints noting the proximity and importance of the canal corridor for wildlife. Adverse effects are assessed for biodiversity. Adverse effects are also assessed for heritage objectives. This notes the role the site plays in its current condition to local townscape character, nearby listed buildings and the conservation area. The qualities of the site are however best observed in long distance views with the urban quality of the site reducing significantly at a site level. This helps to limit the potential effects caused to the historic environment to minor adverse effects and results in mixed effects for townscape objectives, noting the potential benefits that the proposal to provide to urban quality building on the success of the nearby Brierfield Mills project. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

SA Objective	Score	Commentary
		<p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	--	<p><u>Likely Significant Effects</u> The site is located adjacent to a cluster of listed buildings, it is also located within a conservation area. The proposal site in its current form makes a significant contribution towards the setting of the listed buildings and the conservation area providing a rural hamlet like feel and physical form within an otherwise urban area. The development of the site in its entirety would remove this. Substantial harm is likely and as such a significant adverse effect is assessed for this objective.</p> <p><u>Term</u> Permanent significant adverse effect.</p> <p><u>Mitigation</u> A reduced effect, still likely resulting in less than substantial harm, may be provided if a much reduced scheme was promoted which retained the rural outlook provided by the site.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u> Industrial Age (LCC 23) character area. The site does not reflect this character instead providing for a semi-rural feel. As set out above the site makes a significant contribution to the historic environment. For the reasons set out above significant adverse effects for this objective.</p> <p><u>Term</u> Permanent significant adverse effect.</p> <p><u>Mitigation</u> A reduced effect, still likely resulting in less than substantial harm, may be provided if a much reduced scheme was promoted which retained the rural outlook provided by the site.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P319 Greenfield Road, Colne		
SA Objective	Score	Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Positive effects are found for employment and regeneration objectives noting the site's accessibility to existing sources of employment and services. Positive effects are also assessed for health objectives noting the site's accessibility to open space provision and benefits for health provided by the development of new housing. The site is close to high quality public transport provision and is unlikely to contribute to a worsening of existing congestion issues. A minor positive effect is assessed for transport objectives. The site is greenfield and there are adverse effects assessed for the proposals effect on objectives for the effective use of land and natural resources. The proposal not known to be significantly affected by flood risk however this needs further detailed study. It is unknown what biodiversity value the site has. The site does however form part of the borough's green infrastructure network and the development of the site will erode this network. Further assessment of the biodiversity value of the site will need to be undertaken as part of any planning application. The site is located within a conservation area and is closely related to a cluster of listed buildings which make up the Greenfield Road hamlet. The site in its current conditions fulfils an important role to the setting and special character of these listed buildings and conservation area. The proposal to develop the site would significant alter this character resulting in likely substantial harm for the historic environment. Significant adverse effects are assessed for heritage and landscape/townscape objectives for this site as a result. There is a potential that the level of harm caused by the proposed could be reduced if the scale of the proposal was reduced and a larger part of the existing filed retained. Overall, taking the above into account, a minor positive effect for climate change objectives.</p>		

P320 South of Keighley Road, West of Carrier's Row, Laneshaw Bridge

				None. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	0	?	-	<u>Likely Significant Effects</u> The site is not located within 100m of a designated site. It is unclear whether the Site fulfils an important role for protected species. The Site is located within the Green Infrastructure network. Overall the proposal is considered to have a likely minor adverse effect on this objective. <u>Term</u> Minor adverse from the medium to long term with the implementation of mitigation measures.
				<u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats particularly of mature hedgerow <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.			-	<u>Likely Significant Effects</u> A cluster of listed buildings is located near within the historic core of the village to the east. The development of land which is open and in agricultural use and its likely modern suburban form is likely to result in at least less than substantial harm to the historic environment. A minor negative effect is assessed for this objective. <u>Term</u> Permanent minor adverse effect.
				<u>Mitigation</u> A reduced effect, still likely resulting in less than substantial harm, may be provided if a much reduced scheme was promoted which retained the rural outlook provided by the site and providing a more linear form focussed along Keighley Road as reflected by the wider development. <u>Assumptions</u> None <u>Uncertainties</u> None.

SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>Industrial Foothills and Valley (LCC 06a) landscape character area. The form and appearance of the site in its current form contributes to the landscape character area on a localized basis which is not contained to the site itself. The site contributes positively to the setting of the village and is visible from a number of public routes. The site is designated green belt and contributes towards the purposes of the green belt by preventing urban sprawl and safeguarding the open countryside from encroachment. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment and regeneration objectives noting the site's relative inaccessibility to existing sources of employment and services. This serves to undermine the economic benefits associated with the delivery of housing on the site. Positive effects are also assessed for health objectives noting the site's accessibility to open space provision and benefits for health provided by the development of new housing. The site is accessible to public transport provision and is unlikely to contribute to a worsening of existing congestion issues. A minor positive effect is assessed for transport objectives. The site is greenfield and there are adverse effects assessed for the proposals effect on objectives for the effective use of land. The proposal not known to be significantly affected by flood risk however this needs further detailed study. It is unknown what biodiversity value the site has. The site does however form part of the borough's green infrastructure network and the development of the site will erode this network. Further assessment of the biodiversity value of the site will need to be undertaken as part of any planning application. The site is located relatively close to a cluster of listed buildings located within the historic core of the village. The site forms part of the setting of these buildings and its development will introduce uncharacteristic suburban development to the area removing part of the agricultural landscape. A minor adverse effect is assessed for the proposals effect on heritage objectives. The site is found to fulfil a local role within the local landscape character area, it is open and visible from wider public routes and contributes positively to the setting of the village. The site designated green belt and contributes towards Green Belt purposes. The proposal would have a significant adverse effect for landscape/townscape objectives. Overall, taking the above into account, a neutral effect is assessed for climate change objectives.</p>

SA Objective	Score			Commentary
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment and regeneration objectives noting the site’s relative inaccessibility to existing sources of employment and services. This serves to undermine the economic benefits associated with the delivery of housing on the site. Neutral effects are assessed for health objectives noting the site’s accessibility to open space provision and benefits for health provided by the development of new housing, offset by limited opportunity provided for open space to be provided on site. The site is accessible to public transport provision and is unlikely to contribute to a worsening of existing congestion issues. A minor positive effect is assessed for transport objectives. The site is greenfield and there are adverse effects assessed for the proposals effect on objectives for the effective use of land. The proposal not known to be significantly affected by flood risk however this needs further detailed study. It is unknown what biodiversity value the site has. The site is closely related to a designated ecology site with potential to adversely affect this designation. The site also forms part of the borough’s green infrastructure network and the development of the site will erode this network. Further assessment of the biodiversity value of the site will need to be undertaken as part of any planning application. An adverse effect is assessed for biodiversity objectives. The proposal is unlikely to affect the historic environment. The site designated green belt and contributes towards Green Belt purposes. For this reason, the proposal would have a significant adverse effect for landscape/townscape objectives. Overall, taking the above into account, a neutral effect is assessed for climate change objectives.</p>

SA Objective	Score			Commentary
				None. <u>Uncertainties</u> Contributions will do little to address the unsustainable location of the site.
4. To improve the health and wellbeing of those living and working in the Pendle area.	0	-	0	<u>Likely Significant Effects</u> The Site is located within 800m of a GP or open space Little scope exists within the development to accommodate new open space. No health facilities are proposed and the development would increase pressure on existing facilities. The proposal is located adjacent to residential and agricultural land uses. The proposed use is compatible with these uses. On balance the proposal is considered to likely have a minor adverse effect for this objective. <u>Term</u> Likely minor adverse effect from the medium term with the implementation of mitigation measures. <u>Mitigation</u> Open Space provided on site. Contribution towards open space provision may also be required. <u>Assumptions</u> None. <u>Uncertainties</u> None
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	-	0	0	<u>Likely Significant Effects</u> The Site is located within 400m from one or more transport services. The public transport service serving the site is of limited frequency and as such does not provide a reasonable alternative to travel than by car. There are no known highway capacity issues experienced locally which are likely to be affected by the proposal. The development would not support investment in, or result in the loss of transport infrastructure and services. Accounting for the above, the proposal is assessed as having a likely minor adverse effect for this objective. <u>Term</u> A minor adverse effect from the medium term with implementation of mitigation measures. <u>Mitigation</u> Investment in cycle storage and pedestrian and cycle links may be required. Resolve narrow access point over railway. <u>Assumptions</u> None. <u>Uncertainties</u> None.

	0			<p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats particularly of mature hedgerow and trees</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<p><u>Likely Significant Effects</u></p> <p>The site is located near a Grade II* Listed Building. The development of land which is open and in agricultural use and its likely modern suburban form is likely to result in at least less than substantial harm to the historic environment. A minor negative effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent minor adverse effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p>

Appendix 5: Assessment of Potential Housing Sites

P323 Land West of Fence		
SA Objective	Score	Commentary
		<p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>Industrial Foothills and Valley (LCC 06a) landscape character area. The form and appearance of the site in its current form contributes to the landscape character area on a localized basis which is largely contained to the site itself. The site is visible from a number of public routes and has a very limited relationship with the wider village of Fence, almost representing an isolated location. The site is designated green belt and contributes towards the purposes of the green belt by safeguarding the open countryside from encroachment. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has positive effects for housing objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock. Neutral effects are found for employment objectives noting the site's relative inaccessibility to existing sources of employment. The site's relatively poor accessibility to existing services and facilities, including open space provision and healthcare provision means that adverse effects are assessed for health, regeneration and transport objectives. The site is greenfield and there are adverse effects assessed for the proposals effect on objectives for the effective use of land and resources. The proposal not known to be significantly affected by flood risk however this needs further detailed study. It is unknown what biodiversity value the site has. Further assessment of the biodiversity value of the site will need to be undertaken as part of any planning application. The site is located relatively close to a listed building. The site is likely to form part of the setting of this building and its development will introduce uncharacteristic suburban development to the area removing part of the agricultural landscape. A minor adverse effect is assessed for the proposals effect on heritage objectives. The site is found to fulfil a local role within the local landscape character area, it is open and visible from wider public routes and is relatively isolated from the nearby village of Fence. The site designated green belt and contributes towards Green Belt purposes. The proposal would have a significant adverse effect for landscape/townscape objectives. Overall, taking the above into account, a neutral effect is assessed for climate change objectives.</p>

SA Objective	Score	Commentary
	-	<p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. Mitigation measures unlikely to overcome effect on Green Infrastructure network.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u> The Site is unlikely to be affected by heritage assets and as a result the proposal is likely to have a neutral effect for this objective.</p> <p><u>Term</u> Likely permanent neutral effects</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u> The Site is located within the Foothills and Valleys Landscape Character Area (6a), The site contains features and physical characteristics which reflect this wider character area however their value is limited by the site's relative containment by surrounding man-made infrastructure. The site is designated Green Belt and strongly contributes in preventing urban sprawl, preventing the coalescence of two separate settlements (Colne and Barrowford) and protecting the open countryside from encroachment. As a result the proposal has a significant adverse effect on this objective.</p> <p><u>Term</u> Permanent significant adverse effects from the medium term.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>

Appendix 5: Assessment of Potential Housing Sites

P324 Land South of Grenfell Gardens and East of Barrowford Road, Colne				
SA Objective	Score		Commentary	
Summary: The proposal has positive effects for housing and economic objectives due to the provision of new homes and the benefits provided by increasing the quality and diversity of housing stock and associated economic benefits connected to the delivery of new homes. The site is situated at an edge of settlement location and has limited accessibility given the distance from the site to the town centre. Some access is available however and the proposal does not relate to an isolated location. The site is greenfield adjoining the settlement boundary resulting in adverse effects for securing the efficient use of land and protecting natural resources. There are adverse effects assessed for flooding risk noting the site’s high risk of flooding from surface water, which is likely to affect site capacity and could potentially affect overall suitability. The site has an adverse effect for ecology due to the role the site has as part of the green infrastructure of Colne. Further assessment of the ecology of the site is necessary at the planning application station. For heritage objectives the proposal has a neutral effect with the proposal unlikely to affect the historic environment. A significant adverse effect is found for landscape/townscape objectives. The proposal is designated green belt and maintains a critical role in maintaining the separation of two distinctive settlements, prevents urban sprawl and safeguards the open countryside from encroachment. A neutral effect is found for climate change objectives.				

P325 Land off Little Toms Lane, Brierfield				
SA Objective	Score		Commentary	
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+		<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 21 dwellings. The proposal help diversify and improve the quality of the housing stock of Brierfield helping to ensure that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Low viability means that the proposal is unlikely to provide any affordable housing. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>The site is located in an area of Pendle which experiences low viability. The delivery of the site is highly sensitive to cost burdens.</p>	
2. 13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p>Likely Significant Effects</p> <p>The Site is unlikely to be affected by heritage assets and as a result will likely have a neutral effect on this objective.</p> <p>Term</p> <p>Likely permanent neutral effects</p> <p>Mitigation</p> <p>None.</p> <p>Assumptions</p> <p>None</p> <p>Uncertainties</p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-		<p>Likely Significant Effects</p> <p>The Site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site contains of the features of this LCA, and forms part of wider open landscape, which features dry-stone walls, trees and vegetation, and occupies a sloping hill which is increasingly visible from the south. The site occupies the lowest undeveloped area on this slope reducing its affects. Land located to the west has planning permission for 19 dwellings. Developing the site will have a limited adverse effect the landscape character of the site. The effects of this are limited to minor adverse noting that the site does not form part of area designated for its special landscape and will be seen in the context of existing and adjacent neighboring modern development.</p> <p>Term</p>

Appendix 5: Assessment of Potential Housing Sites

P325 Land off Little Toms Lane, Brierfield		
SA Objective	Score	Commentary
		<p>Likely permanent adverse effects reducing as the development matters.</p> <p><u>Mitigation</u></p> <p>Landscaping along the site boundaries to soften the development and provide an area of transition from built form to rural open areas.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: There are positive effects for housing objectives due to the contribution made by the proposal towards housing land supply, improvements provided by the proposals to the quality and diversity of housing stock locally. Minor positive effects are also assessed for regeneration, and economic objectives due to the accessibility of the site to existing provision and sources of employment, and the benefits associated with the delivery of new homes to these objectives. The site is accessible to a number of services available locally as well as public transport routes helping to reduce car usage. The site is greenfield and therefore has adverse effects for securing the efficient use of land and natural resources. The site not found to be at significant risk from flooding from any sources and its development would not affect the historic environment. The site has biodiversity value resulting in adverse effects for ecological objectives. The proposal relates to a large open area which is in an elevated and prominent position above Burnley. Whilst the area is not subject to any formal landscape designation the proposal site does however form part of larger open space which forms an important role in breaking up the urban area, is valued by the community, and contributes to the setting of Brierfield and Burnley. The effects of the proposal on the local landscape are however limited due to its limited scale and location at a less prominent part of the wider open area of land. The proposal therefore has a minor adverse effect for landscape objectives. The proposal has a minor positive effect for climate change objectives.</p>		

P326 Former Nursery, Barkerhouse Road, Nelson		
SA Objective	Score	Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	+	<p><u>Likely Significant Effects</u></p> <p>The Site has capacity for 12 dwellings. The proposal help diversify and improve the quality of the housing stock of Nelson helping to ensure that homes in the local area meet the needs of the local population and increasing opportunities for home ownership. Low viability means that the proposal is unlikely to provide any affordable housing. Notwithstanding this, and taking the above into account it is concluded that the proposal will have a minor positive effect for this policy objective.</p> <p><u>Term</u></p> <p>Minor positive effects from the medium term</p> <p><u>Mitigation</u></p> <p>Planning obligations for the mix of housing</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>The site is located in an area of Pendle which experiences low viability. The delivery of the site is highly sensitive to cost burdens.</p>

SA Objective	Score	Commentary
		<p>whilst vacant, the site has limited visibility due to strong vegetated boundary. Its current condition largely has a neutral effect on the wider area. Overall taking the above into account a neutral effect is assessed for this objective.</p> <p><u>Term</u> Likely permanent neutral effect from the medium term. Initial harm likely during the site clearance and build process.</p> <p><u>Mitigation</u> Adoption of high quality design measures as set out through other policies of the plan.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The site has neutral to positive effects across the majority of SA objectives. This reflects the site's limited scale and its location within the settlement boundary. This reduces the potential for constraints which would otherwise result in adverse effects for environmental objectives, and the reuse of previously developed land assists with objectives seeking the regeneration of the borough, and those which seek to secure the effective use of land. The site is accessible to a good range of services, shops, employment opportunities, as well as public transport, which helps to reduce the need to travel, benefiting transport, and air quality and climate objectives. A minor adverse effect is assessed for flooding objectives owing to the findings of a high risk of groundwater flooding through the SFRA. Minor positive effects are assessed for the site's contribution to housing needs and connected benefits for the economy. The site has previously benefited from planning permission (now lapsed) and as such has been accepted as a suitable location for housing.</p>

P013 Land north of West Craven Business Park, Earby				
SA Objective	Score			Commentary
				<u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0			<u>Likely Significant Effects</u> The Site is not located within a Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective. <u>Term</u> Permanent Neutral effect <u>Mitigation</u> None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	-	<u>Likely Significant Effects</u> The Site is located within 100m of a locally designated ecological site. It is not known whether the site is important for protected species. The site is predominantly improved grassland with a small area of semi improved grassland. There is scattered scrub and trees along the field boundaries. The disused Colne-Skipton railway line is a designated Biological Heritage Site and runs along the western boundary of the site. The Site is within and will result in an adverse effect on the Green Infrastructure Network. <u>Term</u> Likely adverse effects most pronounced during construction and in the short to medium term. These effects will in time reduce as mitigation measures mature and become established. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy, retaining and enhancing existing habitats where possible and creation of new habitats as appropriate within open space, landscaping, and on new buildings. The Site has the potential to connect to and enhance the local green infrastructure network running to the east. The design and layout should make the most of this with enhanced access for residents and corridors for wildlife within the development. New buildings and infrastructure should be avoided in close proximity to the BHS running along the western boundary of the site. This can be set out in policy. <u>Assumptions</u> None. <u>Uncertainties</u> Success and management of open space and biodiversity measures. Low-medium risk.

Appendix 6: Assessment of Potential Employment Sites

P013 Land north of West Craven Business Park, Earby		
SA Objective	Score	Commentary
13. To conserve and enhance the historic environment, heritage assets and their setting.	0	<p><u>Likely Significant Effects</u></p> <p>The site is not located in close proximity to any heritage assets. The proposal is unlikely to adversely affect any heritage asset or designation. The site scores neutrally for this objective.</p> <p><u>Term</u></p> <p>Permanent neutral effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character (Zone 13a). The Site occupies the floor of a narrow valley, and contains features which make a minor contribution to this LCA. The Site is not located within area of noted landscape or townscape quality. Whilst in a countryside setting, the Site is adjoined to the south by an exposed and modern industrial estate. Views to the east are limited by the disused railway line. Taking this into account a minor adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Initial adverse effects experienced during the build phase reducing in the longer term as the development establishes and matures.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively employment and regeneration objectives owing to the benefits brought by new employment development to these objectives, providing increased supply and availability of jobs locally, increased economy activity, opportunities for clustering and local trading. The site is accessible to the community served and its development would help to promote sustainable travel. The site is greenfield and subject to a number of constraints. The site is known to be partially subject to a high risk of flooding, requiring appropriate design responses, including the omission of affected areas from development proposals. The site is situated within the drumlin field landscape character area and contains a number of features characteristic of this landscape area. The site has a relatively poor relationship with the wider settlement, adjoining the existing employment site along a single boundary. Landscape harm will result from the development of the site. The site is also sensitive ecologically with a BHS running along the western boundary of the site. Whilst these constraints serve to raise questions over the suitability of the site for employment, the site must be read within the context of the wider landscape which includes the existing built environment. This includes the existing employment site at West Craven Business Park which sits quite dominant within the landscape and also borders the BHS.</p>

Appendix 6: Assessment of Potential Employment Sites

P069 Land west of Kelbrook Beck, Colne Road, Kelbrook		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The site does not contain the features which contribute to the qualities of this character area. Its development is unlikely to harm the character area significantly, though there may be some views obtainable from the north and west. The Site is relatively well contained with existing road infrastructure and commercial development to the north and east, and the dismantled Colne to Skipton railway line to the west. To the south is open countryside and the development is likely to have some visibility from this aspect. The development will also alter the character and form of the settlement removing open views to the west, and expanding the settlement significantly to the west of Kelbrook Beck. An adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Initial significant adverse effect temporary in nature during construction and in the short to medium term as the development matures and mitigation measures establish. Permanent minor adverse effects in the longer term.</p> <p><u>Mitigation</u></p> <p>Landscaping open space. Sensitive scaling and siting of development, with form of development responsive to the local area and key sensitivities.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively employment and regeneration objectives owing to the benefits brought by new employment development to these objectives, providing increased supply and availability of jobs locally, increased activity, opportunities for clustering and local trading. The site is accessible to the community served and its development would help to promote sustainable travel. The site is greenfield and its development would adversely affect objectives seeking the efficient use of land and protecting natural resources. The site is situated within the drumlin field landscape character area and contains a number of features characteristic of this landscape area. The site forms part of the setting of the wider settlement, and is located at a gateway point into the town. The proposal does not respond to the built form of the village, significantly extending this west beyond the A56. Landscape harm will result from the development of the site. The site experiences flood risk from surface water flooding requiring a design response. It is plausible that responding to this constraint could reduce the net developable area of the proposal.</p>		

Appendix 6: Assessment of Potential Employment Sites

P070 Land to the south of Greenhead Lane, Brierfield			
SA Objective	Score		Commentary
1. To meet the housing needs of all communities in the Pendle area and deliver decent homes.	~		<p><u>Likely Significant Effects</u></p> <p>The proposal is not related to this objective and as such has a negligible impact.</p> <p><u>Term</u></p> <p>Permanent.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
2. To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	0	- 0	<p><u>Likely Significant Effects</u></p> <p>The proposal would provide for almost 30ha of employment space within the Borough. The proposal would make a considerable contribution to the employment supply of the Borough. However this supply provided is significantly in excess of requirements and could serve rival the Borough's existing employment areas. The site is relatively isolated from Pendle's communities, its development is unlikely to be of benefit to Pendle.</p> <p>The Site is located in an isolated location adjacent to the M65 (no motorway junction is directly accessible to the site). There is no public transport serving the Site. The development would require access by car.</p> <p>The proposal does not involve the loss or provision of education facilities and as such scores neutrally for education provision.</p> <p>Accounting for the above an adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Possible permanent adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

P070 Land to the south of Greenhead Lane, Brierfield		
SA Objective	Score	Commentary
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Industrial Foothills and Valleys Landscape Character Area (Zone 6a). The Site contributes significantly to this LCA occupying a large swathe of rural land north of the M65 in the south of Pendle. The Site features a complex field pattern enclosed by vegetated boundaries formed on a gently rising landform. Harm to significant harm to the LCA would arise if the site were developed at the scale proposed. The proposal would represent a major isolated development within the Open Countryside which bears little relation to the existing urban area. The Site would be prominent to views from a wide area of public routes. Its likely to cause harm to significant harm to listed assets. The proposal is within the Green Belt, and makes a major contribution to preventing urban sprawl and protecting the open countryside from development. Its development would therefore conflict with national green belt policy. There are no very special circumstances to warrant the early release of the site for employment development from the Green Belt, with the site of a scale where it significant outstrips need and would cause likely harm to investment and regeneration objectives if it was released. A significant adverse effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent significant adverse effect. Cannot be mitigated in current circumstances.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal has an adverse to significant adverse effect for most SA objectives. This is due to the site's isolated location, its large size and poor relationship to existing settlements, and green belt location. The development of the site would fail to support climate change objectives encouraging travel by car, worsening of air quality, the loss of natural resources, including, potentially, best and most versatile land. The proposal would fail to support objectives which seek to support the regeneration of the borough, and despite providing new jobs, could harm the wider economy, as an alternative location to the borough's existing strategic employment site in a location relatively inaccessible to Pendle's communities. The site experiences a wider range of physical constraints, affecting the suitability of the site by differing degrees. This includes the flood risk, its proximity to the Burnley Waste Water Treatment Works, its biodiversity value, and the likely harm caused to the local historic environment. The poor relationship of the site with existing built form and location within a functioning part of the green belt give rise to significant adverse harm to landscape objectives.</p>

Appendix 6: Assessment of Potential Employment Sites

P236 Land off Barrowford Road (Site B), Hiers House Lane, Colne				
SA Objective	Score			Commentary
				None. <u>Assumptions</u> None. <u>Uncertainties</u> None.
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	+	<u>Likely Significant Effects</u> The proposal is located within 100m of a locally designated site. It is unclear whether the Site fulfils an important role for protected species. The Site consists primarily of improved grassland. The Site sits adjacent to the Green Infrastructure Network and may give rise to the potential to expand and enhance this network. Overall the proposal is considered to have an adverse effect on this objective.
	0			<u>Term</u> The most significant adverse effects of the development are likely to be during construction and experienced in the short to medium term. Following completion of development, adverse effects are likely to reduce and improve as mitigation measures start to benefit wildlife including the provision of linkages to the wider green infrastructure network. <u>Mitigation</u> Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings. <u>Assumptions</u> None. <u>Uncertainties</u> None.
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<u>Likely Significant Effects</u> The Site is located within the vicinity of several listed buildings and/or structures, including those located along the route of the Leeds Liverpool Canal. The development of the Site, noting its scale and type, could result in adverse effects on these historical assets. <u>Term</u> Likely adverse effects most significant during construction and the early years of the development reducing somewhat as mitigation measures establish. Harm is likely to remain. <u>Mitigation</u> Relationship of the Site to the listed building to be understood through the submission of further evidence. Impact might be reduced with sensitive siting and scaling of development. Boundary treatments and open space. <u>Assumptions</u> None <u>Uncertainties</u>

Appendix 6: Assessment of Potential Employment Sites

P236 Land off Barrowford Road (Site B), Hiers House Lane, Colne		
SA Objective	Score	Commentary
		None.
14. To conserve and enhance landscape character and townscapes.	--	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site does not contain the features which are important to this LCA and therefore its development is unlikely to harm this LCA. The Site relates poorly to the existing urban area, and is significantly out-of-scale with its surroundings. Its development would represent a substantial protrusion into the open countryside which is likely to be visible from several public and locally important routes such as the Leeds and Liverpool Canal and would be detrimental to the setting of Colne. The Site is designated Green Belt, and has been confirmed to fulfil a crucial role in preventing the coalescence of Colne with Barrowford. There are no known very special circumstances which would support the proposals release from the Green Belt. As a result permanent significant adverse effects are assessed for this objective. This effect is not current considered to be mitigatable.</p> <p><u>Term</u></p> <p>Permanent significant adverse effects.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively employment and regeneration objectives owing to the benefits brought by new employment development to these objectives, providing increased supply and availability of jobs locally, increased activity, opportunities for clustering and local trading. The site sits at the edge of Colne, and whilst accessible to part of the town, to the wider town, the accessibility of the site is limited noting the limited range of public transport options serving the site. The wider area experiences significant congestion during peak hours. Studies have recommended a relief road of Colne and the proposal's delivery in tandem with this would enable this issue to be addressed. The site is greenfield and is development would adversely affect objectives seeking the efficient use of land and protecting natural resources. The site is designated green belt and has been shown to fulfil the purposes of the Green Belt. There are no exceptional circumstances at this time to justify the release of this land for employment noting assessed level of needs and the contribution fulfilled by existing commitments. The site is subject to ecological and historical constraints which may serve to restrict or prevent part of the site from being developed requiring a design response. The site is not anticipated to cause problems for flood risk, and overall the effects of developing the site on climate change objectives are assessed to be neutral.</p>

the sustainable use of natural resources.				<p>Permanent neutral effect.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	0	<p><u>Likely Significant Effects</u></p> <p>The proposal is located within 100m of a locally designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly improved grassland.</p> <p>The Site is located adjacent to the Green Infrastructure network. Its development is unlikely to adversely affect this network.</p> <p>Overall the proposal is considered to have a likely minor adverse effect on this objective.</p> <p><u>Term</u></p> <p>Minor adverse effect most significant in the short term. Potential Neutral effect from the medium to long term with the implementation of mitigation measures.</p> <p><u>Mitigation</u></p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	-			<p><u>Likely Significant Effects</u></p> <p>The Site is located in close proximity to two listed building/structure and likely to form part of their setting/within their influence. The development of the site may adversely affect these listed assets resulting in at least less than substantial harm. A minor adverse effect is assessed as a result.</p> <p><u>Term</u></p> <p>Likely adverse effect with reduced impact possible with mitigation measures.</p> <p><u>Mitigation</u></p> <p>Development located away from listed structures with suitable boundary treatment.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p>

Appendix 6: Assessment of Potential Employment Sites

P266 Land North East of Kelbrook Road, Barnoldswick		
SA Objective	Score	Commentary
		Public benefits of the proposals outweigh the harm identified to the historic environment (medium risk).
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Drumlin Field Landscape Character Area (Zone 13a). The Site contributes to the qualities of this LCA with complex landforms and vegetated boundaries rising from the canal. The Site also affords views out to land which contributes significantly to this LCA. The loss of the site would harm the LCA at a local level. The proposal would significantly extend the built up area of Barnoldswick south and eastwards to the Leeds Liverpool Canal. In this way the proposal would round off the settlement using the canal as a distinct settlement boundary. The development would be highly visible to the east which likely adverse effects on the landscape. Adverse effects are assessed for this objective.</p> <p><u>Term</u></p> <p>Likely adverse effect unlikely to be reduced much by mitigation measures.</p> <p><u>Mitigation</u></p> <p>Suitable buffer and boundary treatment works to the Canal. Provision of green routes through the development to break up the form of development providing a reduced density development on the edge of the settlement and safeguarding views through the site.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The proposal scores positively employment and regeneration objectives owing to the benefits brought by new employment development to these objectives, providing increased supply and availability of jobs locally, increased economic activity, opportunities for clustering and local trading. The site is accessible to the local community by foot, bicycle and public transport. Its development would support sustainable transport objectives. Adverse effects for health are noted due to the proximity of the site to existing dwellings (newly built) and users of the Leeds and Liverpool Canal. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. The site is subject to flood risk and so the scale and layout of the development will need to be designed around this constraint ensuring the proposal does not increase on and off site flood risk for all sources accounting for the effects of climate change. It is unclear what role the site has for biodiversity requiring further assessment. The site is adjacent to an existing ecological designation and therefore its development has the potential to adversely affect this designation. The site is near to listed buildings potentially forming part of their setting. The proposal will alter this setting potentially resulting in less than substantial harm. An adverse effect is found for the historic environment objective as a result. The proposal is visible from wider areas including public routes and positively contributes to the special forms and features of the landscape character area. Its loss to development would result in an adverse effect on the local landscape resulting in adverse effects for this objective. A minor positive effect is assessed for climate change objective.</p>		

Appendix 6: Assessment of Potential Employment Sites

SA Objective	Score	Commentary
		None.
14. To conserve and enhance landscape character and townscapes.	-	<p><u>Likely Significant Effects</u></p> <p>The Site is located within the Moorland Fringe Landscape Character Area (Zone 4g). The Site itself does not reflect the features of this LCA being previously subject to intensive activity. The development of the site would harm the character of the wider landscape. The Site is isolated within the open countryside. It is not a suitable location for major development. Its development will adversely affect the local landscape, views, and character. A minor adverse effect is assessed.</p> <p><u>Term</u></p> <p>Permanent minor adverse effects.</p> <p><u>Mitigation</u></p> <p>Scaling, layout, type and amount of development. Use of natural materials for construction. Comprehensive landscaping scheme required.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: The principle benefit of the proposal is its previously developed form and relative containment. The wider benefits however are limited due to the site's isolated location. This serves to significantly reduce the benefits the proposal has for economic, health and regeneration objectives, with little to no benefit recorded. The development of the site will force people to travel by car to access employment and to service the site. This will increase the reliance on car usage, countering objectives for sustainable transport, the promotion of air quality, and climate change. The site is not known to be subject to flood risk. It is unclear what role the site has for biodiversity though the site is being reclaimed by nature. Further assessment is required. The site does not affect the historic environment. Whilst contained, the introduction of a major development to the open countryside is likely to cause harm to the local landscape, harm is also assessed for residential amenity, with the degree of this harm, dependent on the type and intensity of the use which is proposed.</p>

SA Objective	Score	Commentary
		<p>development would be highly visible from public routes including PROW. A significant adverse effect is assessed, reducing to adverse if developed in conjunction with P068/P273.</p> <p><u>Term</u> Significant adverse reducing with mitigation and if developed with P068.</p> <p><u>Mitigation</u> Boundary treatments. Layout and form of development. Open Space to break up development and reduce its visibility. Development should be in conjunction with P068/P273.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: The site adjoins Kelbrook a Rural Service Village, and will increase opportunities for employment within the village and wider local area. Its development will benefit the local economy and could add to local industrial clusters. There are limited services available within Kelbrook, however the site is served by public transport, helping to encourage travel by sustainable forms of transport. The site is accessible from the highway and there are no major notable traffic problems locally. The proposed use is largely compatible with adjacent uses subject to mitigation measures. The proposal relates to undeveloped land and as such does not support aims to secure the efficient use of land or protecting natural resources. There is potential given the site's close proximity to an existing watercourse that the proposal may affect the integrity of this channel. Safeguarding measures may be required. The site is not known to be affected by flooding, however further assessment will be required. The site is close to a designated site and has the potential to affect this designation. Further detail about the site's ecological role and value is at this stage unknown, and requires further assessment. Adverse effects are assessed for biodiversity objectives. The proposal is not known to affect the historic environment. The proposal is located in the open countryside and does not contain the features which contribute to the local landscape character area. The site however poorly relates to the settlement pattern of Kelbrook magnifying its potential to cause adverse effects to local character including the setting of Kelbrook. A significant adverse effect is therefore assessed for landscape objectives. Overall a neutral effect is assessed for climate change objectives.</p>

Remediation measures may be required to address any contamination issues carefully and without polluting local water resources.</p> <p>Overall the proposal is considered to have a minor adverse effect on this objective.</p> <p><u>Term</u></p> <p>Adverse effects likely to be highest during construction. Adverse effects will be kept to a minimum provided mitigation measures are adopted for the design and construction of the development. Overtime the effects of the development on the environment would reduce to nil and may become positive provided mitigation is successful and a high quality design is adopted.</p> <p><u>Mitigation</u></p> <p>Site Investigation required. Remediation works to be undertaken in accordance with findings of site investigation. Development to be directed away from the Canal, with drainage managed on-site to limit flow into the Canal.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
8. To reduce the risk of flooding to people and property, taking	-	<p><u>Likely Significant Effects</u></p> <p>The SFRA finds that parts of the site are subject to a high risk of flooding. The Site is subject to a high risk of flooding from surface water. This is likely to affect the capacity of the site for development. A minor adverse effect is therefore assessed for this objective.</p>

Appendix 6: Assessment of Potential Employment Sites

P309 Land at Ouzledale Foundry, Long Ing Lane, Barnoldswick		
SA Objective	Score	Commentary
into account the effects of climate change.		<p><u>Term</u> Minor adverse effects potentially reducing with the adoption of mitigation measures where suitable.</p> <p><u>Mitigation</u> Adoption of the SuDs hierarchy to manage surface water drainage from the site. Development in high risk areas from flooding to be avoided as informed by a site specific FRA. Sufficient storage capacity provided within the site to ensure that flood risk doesn't increase elsewhere.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Site specific detail to be assessed at the planning application stage</p>
9. To improve air quality.	0	<p><u>Likely Significant Effects</u> The Site is located in excess of 500m of the Colne AQMA. The Site therefore has a neutral effect on this objective.</p> <p><u>Term</u> Likely permanent neutral effects.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	<p><u>Likely Significant Effects</u> The site has a suitability score of 4.13. The site therefore would have a minor positive effect for this objective. The suitability score assesses access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations. The high score recognises the accessibility of the site to existing services, shops, sources of employment and public transport provision thereby helping to promote the use of non-car modes for travel, and the proposal to reuse and reorganise a site which is largely previously developed.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a minor positive effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u></p>

Appendix 6: Assessment of Potential Employment Sites

P309 Land at Ouzledale Foundry, Long Ing Lane, Barnoldswick			
SA Objective	Score		Commentary
			Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium
11. To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	0		<p>Likely Significant Effects</p> <p>The Site is not located within the Mineral Safeguarding Zone, and as a result is considered to have a neutral effect on this objective.</p> <p>Term</p> <p>Neutral effect for the plan period.</p> <p>Mitigation</p> <p>None.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>None.</p>
12. To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	-	?	0
	-		<p>Likely Significant Effects</p> <p>The site is located within 100m of locally designated site.</p> <p>It is unclear whether the Site fulfils an important role for protected species. The Site is predominantly semi improved grassland.</p> <p>The Site is adjacent to the Green Infrastructure network. Its development is unlikely to adversely affect this network.</p> <p>Overall the proposal is considered to have a likely minor adverse effect on this objective.</p> <p>Term</p> <p>Minor adverse effect improving towards a neutral effect from the medium to long term with the implementation of mitigation measures.</p> <p>Mitigation</p> <p>Implementation of net gains for biodiversity on site in line with policy. Protection and enhancement of existing habitats. Creation of new habitats where appropriate within open space, landscaping, and new buildings.</p> <p>Assumptions</p> <p>None.</p> <p>Uncertainties</p> <p>None.</p>
13. To conserve and enhance the historic environment, heritage assets and their setting.	0		<p>Likely Significant Effects</p> <p>The Site is unlikely to affect any nearby heritage assets. The Leeds and Liverpool Canal runs adjacent to the site. Whilst the canal has historical significance it has a transitional and varied character through Barnoldswick which would not be significantly altered with the development of the site for employment. The current form of the site (in terms of its vacant and undeveloped elements) does not contribute to the quality of the canal corridor in any way. Taking this into account the proposal is likely to have a neutral effect for this objective.</p>

Appendix 6: Assessment of Potential Employment Sites

P309 Land at Ouzledale Foundry, Long Ing Lane, Barnoldswick		
SA Objective	Score	Commentary
		<p><u>Term</u> Likely permanent neutral effect.</p> <p><u>Mitigation</u> None.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
14. To conserve and enhance landscape character and townscapes.	0	<p><u>Likely Significant Effects</u> The Site comprises of vacant land within the settlement boundary. The site is closely related to land used for employment, which of limited visual quality. The current form of the site, together with its surroundings does not contribute positively to urban quality and the proposal to develop this land for employment is unlikely to significantly degrade or enhance urban quality – though opportunities exist.</p> <p><u>Term</u> Initial adverse effects likely to turn positive in the longer term once the development is completed. Overall neutral effects are assessed from the proposal.</p> <p><u>Mitigation</u> Existing greenery on site should be incorporated and expanded through the design of the redevelopment. The setting of the canal should be enhanced with greater accessibility.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> None.</p>
<p>Summary: This appraisal relates to the extent of the site which is located outside of the protected employment site only. Positive effects are found for employment and regeneration objectives noting the site's proximity to existing sources of employment and services and the role the site will have in contributing to the local economy. The site is accessible to public transport provision and its development is unlikely to significantly worsen congestion problems. A minor positive effect is assessed for transport objectives. The proposal relates to land which is under used within the settlement boundary of Barnoldswick and therefore has significant positive effects for use of resources and making efficient use of land. The proposal is closely related to the Leeds and Liverpool Canal. The proposal has the potential to affect the structural integrity of the canal. The site is subject to a degree of flood risk. Minor adverse effects are found for this objective. The proposal site is adjacent to a designated ecological site. Its development could adversely affect the integrity and quality of habitats in this designation. The proposal site has unknown value for protected species. Further assessment and surveys are required. The site is adjacent to the green infrastructure network. The proposal has the potential to connect with this network. Overall the proposal has a minor adverse effect for biodiversity objectives. The proposal is unlikely to harm the local historical environment noting the relative poor quality of the existing site, adjacent uses and transitional nature of the canal route through Barnoldswick. The condition of the site and close relationship with adjacent employment uses means that its development is unlikely to harm or enhance the local built environment, though opportunities clearly exist to secure enhancements with a higher quality design. Equally if the proposal is not subject to a high quality and evidenced approach, then the proposal has the potential to harm the local environment. Overall, taking this above in account, the proposal has a minor positive effect for climate change.</p>

Commercial activities and operations may be disruptive to existing neighbours (limited risk).</p>
5. To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	0	0	<p><u>Likely Significant Effects</u></p> <p>The Site is located within 400m from one or more transport services.</p> <p>No known congestion issues locally.</p> <p>The development would not support investment in, or result in the loss of transport infrastructure and services.</p> <p>Accounting for the above, the proposal is assessed as having a likely minor positive effect for this objective.</p> <p><u>Term</u></p> <p>A minor positive effect from the medium term with implementation of mitigation measures.</p> <p><u>Mitigation</u></p>
	+			<p>Investment in cycle storage and pedestrian and cycle links may be required. Resolve narrow access point over railway.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>

Appendix 6: Assessment of Potential Employment Sites

P313 Land at Gyhill Brow, Skipton Road, Barnoldswick		
SA Objective	Score	Commentary
6. To encourage the efficient use of land and conserve and enhance soils.	++	<p><u>Likely Significant Effects</u></p> <p>The Site is comprised of brownfield land in use for employment. The proposal is therefore considered to have a significant positive effect for this objective.</p> <p><u>Term</u></p> <p>Adverse effects during demolition and remediation works. Soon changing to positive and significant positive through the build stages and after completion.</p> <p><u>Mitigation</u></p> <p>None.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>None.</p>
7. To conserve and enhance water quality and resources	<div>-</div> <div>-</div> <div>-</div>	<p><u>Likely Significant Effects</u></p> <p>The Site is located within 50m of a watercourse (Leeds and Liverpool Canal).</p> <p>The development is unlikely to require upgrading to existing water infrastructure.</p> <p>The proposal may affect water quality as a result of the site's development.</p> <p>Overall the site is considered to have a minor adverse effect for this objective.</p> <p><u>Term</u></p> <p>Permanent neutral effect.</p> <p><u>Mitigation</u></p> <p>Ground investigation required. Development (including remediation works) to take place in accordance with recommendations for this report.</p> <p><u>Assumptions</u></p> <p>None.</p> <p><u>Uncertainties</u></p> <p>Ground works may render the proposal unviable (high risk).</p>
8. To reduce the risk of flooding to people and property, taking into account the effects of climate change.	0	<p><u>Likely Significant Effects</u></p> <p>The SFRA confirms that is at a low risk of flooding from rivers and medium risk of flooding from surface water. A low chance of flooding from groundwater affects the site. Flood risk is unlikely to affect the site's suitability though may affect its overall capacity. A neutral effect is assessed for this objective.</p>

Appendix 6: Assessment of Potential Employment Sites

P313 Land at Gyhill Brow, Skipton Road, Barnoldswick		
SA Objective	Score	Commentary
		<p><u>Term</u> Permanent neutral effect.</p> <p><u>Mitigation</u> Careful design of development, sufficient means of surface water storage to ensure that the development does not adversely affect flood risk. Open space and landscape. Rainwater capture.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> None.</p>
9. To improve air quality.	+	<p><u>Likely Significant Effects</u> The Site is located within of 500m of the Colne AQMA. The redevelopment of the site could benefit local air quality by removing a pollution source and its replacement with a less intense use. The proposal therefore has a minor positive effect on this objective.</p> <p><u>Term</u> Minor positive effects over the plan period.</p> <p><u>Mitigation</u> Adoption of measures to promote access and travel by sustainable transport modes. Implementation of Travel Plan measures.</p> <p><u>Assumptions</u> None</p> <p><u>Uncertainties</u> Success of intervention measures to secure a modal shift (medium risk).</p>
10. To minimise greenhouse gas emissions and adapt to the effects of climate change.	0	<p><u>Likely Significant Effects</u> The site has a suitability score of 3,61. The site therefore would have a neutral effect for this objective. The suitability score assess access to services, effects on ecology, effect of flood risk, effect on landscape and policy designations.</p> <p><u>Term</u> Based on the location of the site and its physical characteristics, the proposal is considered to have a neutral effect of this objective. The full effects will only be known at the detailed design stage.</p> <p><u>Mitigation</u> Sustainable design, construction and operation. Implementation of policy requirements for energy efficiency, use of renewable energy, and promotion of sustainable transport modes.</p> <p><u>Assumptions</u> None.</p> <p><u>Uncertainties</u> Extent to which measures addressing climate change are provided through a scheme at the planning application stage. Medium Risk.</p>

14. To conserve and enhance landscape character and townscapes.	+	<p><u>Likely Significant Effects</u></p> <p>The site is located within the Drumlin Field (13a) Landscape Character Area. The site used for heavy industrial use and has a functional appearance. It does not therefore reflect the characteristics of the local landscape character in anyway and detracts from this landscape in its current form. The site is located adjacent to a several listed buildings and structures largely associated with the Leeds and Liverpool Canal. The site in its current form is therefore likely to detract from this environment if there is any relationship. The redevelopment of the site for a less intensive use will be of benefit to the historic environment, care will however be needed for the specific design, orientation, materials and layout of new buildings constructed particularly those nearest to designated heritage assets. Whilst noting that the site is isolated from existing settlements, it is nevertheless concluded that a minor positive effect is assessed for this objective.</p> <p><u>Term</u></p> <p>Permanent minor positive effect.</p> <p><u>Mitigation</u></p> <p>Care will be needed for the specific design, orientation, materials and layout of new buildings constructed particularly those nearest to designated heritage assets and those featuring at the boundaries of the site.</p> <p><u>Assumptions</u></p> <p>None</p> <p><u>Uncertainties</u></p> <p>None.</p>
<p>Summary: Whilst already forming a site used for active employment use, the proposal enables the continued economic use of the site. Positive effects are therefore found for employment and regeneration objectives. Whilst located outside of Barnoldswick and within the open countryside, the site is served by public transport links and there is opportunity to make use of the canal towpath for walking or cycling. The proposal supports objectives seeking the reuse and optimisation of developed land and helps to safeguard wider greenfield land. The proposal is closely related to the Leeds and Liverpool Canal and in particular a number a heritage assets found along this corridor. The redevelopment provides the opportunity to enhance the character and setting of the area, removing industrialised form from an otherwise rural landscape. The same benefits are highlighted for landscape objectives, and the redevelopment will remove risk of pollution entering the wider area from the proposal site when its current use ends, enabling this to be effectively treated. The proposal provides opportunities to create linkages to the green corridor provided by the Leeds and Liverpool Canal. Taking the above into account, and noting the relatively isolated location of the site, the proposal is assessed to have a neutral effect for climate change objectives.</p>

Further study is necessary to understand the degree and importance of this relationship and how to best consider its effects on the development proposal. The proposal is unlikely to affect the historic environment. The site makes some contribution to the local landscape area. The site is in an isolated location and whilst contained by man-made features to the north and west, is open to views from the south. Overall a minor adverse effect is assessed for this objective. A minor positive effect is assessed for climate change objectives.</p>		

Appendix 7: List of sites screened-out and not fully assessed

Table A: Submitted Sites Screened-out	
Site Reference and Location	Reason(s) for Screening Out
P006 Land off Red Lane, Colne	Committed site. Development underway.
P007 The Meadows, Colne	Committed site. Development underway.
P008 Great House Farm, Red Lane	No longer available
P009 Windermere Avenue, Colne	Committed site. Development underway.
P012 Former builders yards off Gillians Lane, Barnoldswick	Too small in size and capacity to meet threshold for allocation
P018 Land off Stoney Bank Road, Earby	Sub-divided and considered under P263 and P265
P023 Spring Gardens Mill, Colne	Not available. Developing for employment use.
P024 Swinden Playing Fields, Cravendale Avenue, Nelson	No longer available
P027 Land off Wood Street, Brierfield	Too small in size to meet threshold for allocation
P028 Land adjacent to 15 Clough Road, Nelson	Too small in capacity to meet threshold for allocation
P029 Land off Trent Road, Nelson	Too small in capacity (site constraints) to meet threshold for allocation
P030 Marsden Hall Road North, Nelson	Too small in size and capacity to meet threshold for allocation
P031 Reedyford Road, Nelson	Too small in size and capacity to meet threshold for allocation
P032 Further Clough Head, Nelson	Committed site. Development underway.
P033 Land off Halifax Road (Site B), Halifax Road, Nelson	No longer available (Council owned)
P034 Juno Street, Nelson	Too small in size and capacity to meet threshold for allocation
P035 Varley Street, Colne	Too small in size and capacity to meet threshold for allocation
P036 Land off Byron Road, Colne	Not available (Council owned).
P037 Land off Waterside Road, Colne	Not available.
P038 Land at Hawley Street, Colne	Too small in size and capacity to meet threshold for allocation
P039 Land adjacent to 6 Knotts Lane, Colne	Too small in size and capacity to meet threshold for allocation
P040 Land between Hawley Street and Kyber Street, Colne	Too small in size and capacity to meet threshold for allocation
P041 Land to rear of Atkinson Street, Colne	Too small in size and capacity to meet threshold for allocation
P043 Land at Kenilworth Drive, Earby	Too small in size to meet threshold for allocation

Appendix 7: List of sites screened-out and not fully assessed

Table A: Submitted Sites Screened-out	
Site Reference and Location	Reason(s) for Screening Out
P044 Land at Bailey Street, Earby	Not available (Council owned)
P045 Aspen Grove, Earby	Not available (Council owned)
P046 Land off Carr Road, Nelson	Too small in size to meet threshold for allocation
P047 Land off Lomeshaye Way, Nelson	Not available (Council owned)
P048 Former Gas Works, Brierfield	Not available (part of wider comprehensive redevelopment)
P049 Land off Greenfield Road, Colne	Not available (Council owned)
P050 Land adjacent to Wanless Water, Greenfield Road, Colne	Not available (Council owned)
P051 Land adjacent to 100 Greenfield Road, Colne	Too small in size and capacity to meet threshold for allocation
P054 Land at Dam Side, Colne	Too small in size and capacity to meet threshold for allocation
P057 Former Fernbank Mill, Fernbank Avenue, Barnoldswick	Not available (proposal to develop for employment use approved)
P058 Primet Foundry, Colne	Too small in size to meet threshold for allocation. Primarily within flood zones 2/3.
P061 Garages at Crow Nest, Laneshaw Bridge	Too small in size and capacity to meet threshold for allocation
P063 Land south west of Woodside Terrace, Nelson	Too small in size and capacity to meet threshold for allocation
P066 North West of Higher Parrock House, Parrock Road, Barrowford	Proposal for designation.
P072 Land at Dam Head Barn, Roughlee	Too small in size to meet threshold for allocation
P073 Land adjacent to 19 Briercliffe Avenue, Colne	Too small in size and capacity to meet threshold for allocation
P074 Scholefield Farm, Railway Street, Nelson	Site inaccessible.
P076 Land adjacent to 82 Esp Lane, Barnoldswick	Too small in size and capacity to meet threshold for allocation
P077 Gisburn Street Works, Barnoldswick	Too small in size to meet threshold for allocation
P079 Land adjacent to Sykes Laithe, Salterforth	Too small in size and capacity to meet threshold for allocation
P084 Land to rear of Dewhurst Street, Colne	Too small in size and capacity to meet threshold for allocation
P085 Land adjacent to Primet High School, Colne	Proposed allocation for expansion of adjacent educational facility
P089 Land off Ball Grove Drive, Colne	Too small in size and capacity to meet threshold for allocation

Appendix 7: List of sites screened-out and not fully assessed

Table A: Submitted Sites Screened-out	
Site Reference and Location	Reason(s) for Screening Out
P090 Black Carr Mill and The Rock Business Centre, Trawden	Allocated for housing in the Trawden Forest Neighbourhood Plan
P092 Thomas Street Car Park, Colne	Too small in size to meet threshold for allocation
P094 Land to rear of Wood Street, Colne	Too small in size and capacity to meet threshold for allocation
P095 White Grove Garage Site, Colne	Too small in size and capacity to meet threshold for allocation
P096 Land at Walton Street, Colne	Too small in size and capacity to meet threshold for allocation
P097 Brierfield Mills, Brierfield	Committed site. Development underway.
P098 Land off Railway Street, Brierfield	Too small in size and capacity to meet threshold for allocation
P099 Coronation Road, Brierfield	Not available (Council owned)
P101 Land at Tyseley Grove, Earby	Too small in size and capacity to meet threshold for allocation
P102 Land adjacent to 11 Osbourne Terrace, Spen Brook	Too small in size and capacity to meet threshold for allocation
P105 Land off Halifax Road (Site A), Brierfield	Not available (Council owned)
P106 Land off Borrowdale Drive, Earby	Not a potential development site. Proposed open space designation.
P107 Land adjacent to 71 Mansfield Crescent, Brierfield	Too small in size and capacity to meet threshold for allocation
P113 Harrison Drive Recreation Ground, Colne	Not a potential development site. Potential open space designation.
P118 Land adjacent to 34 Lenches Road, Colne	Too small in size and capacity to meet threshold for allocation
P119 Land to rear of 1 Bankfold, Barrowford	Too small in size and capacity to meet threshold for allocation
P124 Land adjacent to Lakeside	Too small in capacity to meet threshold for allocation
P127 Land at Lane Ends Farm, Greenberfield Lane, Barnoldswick	Committed site. Development underway.
P129 St Michael's Vicarage, Skipton Road, Foulridge	Not available.
P131 Gisburn Road Car Park (South)	Not a potential development site. Proposed protected car park designation.
P132 Gisburn Road Car Park (North)	Not a potential development site. Proposed protected car park designation.
P133 Pendle Street Garage Site, Barrowford	Too small in size and capacity to meet threshold for allocation
P134 May Street Garage Site, Barrowford	Too small in size and capacity to meet threshold for allocation
P135 Nora Street Garage Site, Barrowford	Too small in size and capacity to meet threshold for allocation

Appendix 7: List of sites screened-out and not fully assessed

Table A: Submitted Sites Screened-out	
Site Reference and Location	Reason(s) for Screening Out
P137 Land adjacent to 503 Wheatley Lane Road, Fence	Committed site. Planning permission granted.
P138 Land adjacent to 310 Wheatley Lane Road, Fence	Too small in size and capacity to meet threshold for allocation
P140 Land at Lily Street, Nelson	Too small in size and capacity to meet threshold for allocation
P141 Former Vulcan Mill, Nelson	Allocated for employment in the Bradley Area Action Plan
P142 Land south of Red Scar Works, Cliff Street, Colne	Not available (active employment use)
P143 Grains Barn Farm, Fence	Too small in size and capacity to meet threshold for allocation
P146 Land west of Alder House, Nelson	No longer available
P147 Former Kippax Biscuits, Nelson	No longer available
P149 Crownest Mill, Skipton Road, Barnoldswick	Committed site. Development complete.
P154 Land off Jackdaw Road, Barnoldswick	Assessed under P309
P155 Land at R B Business Park, Colne	Part of protected employment area; principle for employment use is already established
P156 Land off Lomeshaye Place, Nelson	Part of protected employment area; principle for employment use is already established
P157 Land to rear of 31-33 Kenyon Road, Nelson	Part of protected employment area; principle for employment use is already established
P158 Land to rear of 12 Lindred Road, Nelson	Part of protected employment area; principle for employment use is already established
P159 Yard off Brook Street, Nelson	Too small in size and capacity to meet threshold for allocation
P160 Land off Junction Street, Nelson	Part of protected employment area; principle for employment use is already established
P161 Part Rolls Royce Bankfield Site, Barnoldswick	Designation Proposal
P162 Land at Ravenscroft Way, Barnoldswick	Too small in size and capacity to meet threshold for allocation
P163 Skipton Road Business Centre, Barnoldswick	Too small in size and capacity to meet threshold for allocation
P164 Land off Skipton Road	Committed site. Planning permission granted on appeal.
P166 Former Quarry, Heather Close, Brierfield	Committed site. Development underway.
P167 Land at Bright Street	Committed site. Planning permission granted.
P168 Land at Warehouse Lane, Foulridge	Committed site. Development complete.
P169 Former Reservoir, Park Hill, Barnoldswick	Not available (Active utility site)

Appendix 8: Possible Monitoring Indicators

SA Framework Objective	New Sub-objectives	SEA Topic	Indicative Indicators to use	
			For Policy Monitoring	For Site Allocations
To meet the housing needs of all communities in the Pendle area and deliver decent homes.	<ul style="list-style-type: none"> • Meet the housing requirement in full. • Secure a mix of housing types and tenures to respond to housing needs. • Maximise the amount of affordable housing secured over the plan period. • Secure the reuse of long term vacant dwellings. • Provide quality homes which meet efficiency standards, the needs of their occupiers, and provide sufficient living space. 	Population	<ul style="list-style-type: none"> • Homes completed by location (in contrast to housing requirement and spatial strategy) • Homes permitted and with consent (in contrast to housing requirement and spatial strategy) • Future predicted completions (based on SHLAA and 5yhl) • 5 year supply position • Housing Delivery Test result • Number of Affordable Homes completed by tenure and location • Number of affordable homes granted planning permission by location • Type, size and tenure by location. • Schemes refused on grounds of poor design. • Number of new pitches for Gypsy and Traveller, and Travelling Showpeople completed and with extant planning consent. • Homes completed addressing a specific housing need by location. • Number of self-build plots delivered in the Borough. 	<ul style="list-style-type: none"> • Progress of Site Allocations • Capacity of Site Allocation against policy requirements. • 5 year supply position • Dwelling size and tenure mix achieved in comparison to needs • Affordable housing delivery. • Self-build delivery.
To achieve a strong and stable economy which offers high quality and well located employment opportunities for everyone.	<ul style="list-style-type: none"> • Bring forward key employment sites and protect existing employment sites from loss. • Fulfil aims and objectives of sub-regional economic strategies. • Increase education attainment and skills. • Support and grow the tourism sector. • Protect the vitality of the borough town centres. 	Population	<ul style="list-style-type: none"> • Amount of new employment floorspace completed by type and location. • Amount of new employment floorspace completed on PDL by type and location. • Amount of new employment land/floorspace with extant planning consent by type and location. 	<ul style="list-style-type: none"> • Site delivery monitor by area and type of floorspace. • Use/changes of floorspace at employment sites and within shopping frontages. • Retail occupancy. • Nature of proposal and effects on operations of wider uses.

Appendix 8: Possible Monitoring Indicators

SA Framework Objective	New Sub-objectives	SEA Topic	Indicative Indicators to use	
			For Policy Monitoring	For Site Allocations
			<ul style="list-style-type: none"> Amount of employment land/floorspace lost to alternative uses by location. Number and change in VAT registered businesses. Employment levels by age and sector Unemployment levels: Borough wide Town centre usage and vacancy rate. 	
To promote urban regeneration, support the vitality of rural areas, tackle deprivation and promote sustainable living.	<ul style="list-style-type: none"> Reduce levels of deprivation. Promote social cohesion recognising the diversity of Pendle's communities. Increase education attainment and skills. Maintain and enhance the vitality of the Borough's town centres, local shopping centres, villages and rural areas. Safeguard existing community facilities and services, and secure timely delivery of new services through new development. Protect vitality of town centres. 	Population Human Health	<ul style="list-style-type: none"> Gains/losses of community facilities. Education qualification attainment Homes completed addressing a specific housing need by location. Amount of new housing with access to key services. Number and change in VAT registered businesses. Employment levels by age and sector Unemployment levels: Borough wide Town centre usage and vacancy rate. Location and quality of open space. 	<ul style="list-style-type: none"> Accessibility via sustainable modes of transport. Access to essential daily services including supermarkets/convenience stores Access to employment Connectivity to pedestrian and cycling infrastructure inclusive of PROW. Access to open space/open space provided. Access to doctors and healthcare facilities. Site delivery monitor by area and type of floorspace. Use/changes of floorspace at employment sites and within shopping frontages. Retail occupancy.
To improve the health and wellbeing of those living and working in the Pendle area.	<ul style="list-style-type: none"> Protect and enhance the health and wellbeing of the Borough's population. Promote health lifestyles and address obesity and levels of physical activity. 	Population Human Health	<ul style="list-style-type: none"> Provision of open space by type and location (including trends over time). Gains/losses of community facilities Life expectancy at birth Infant mortality rate. 	<ul style="list-style-type: none"> Access to open space/open space provided. Access to doctors and healthcare facilities. Nature of adjacent uses, proximity to the site, and considered effects.

Appendix 8: Possible Monitoring Indicators

SA Framework Objective	New Sub-objectives	SEA Topic	Indicative Indicators to use	
			For Policy Monitoring	For Site Allocations
	<ul style="list-style-type: none"> Address health and disability related deprivation. Protect and enhance open space provision, and promote access to open space. Provide quality homes which meet efficiency standards and provide sufficient living space. Reduce actual and fear of crime. Secure development which discourages and reduces opportunities for crime. 		<ul style="list-style-type: none"> Death from respiratory diseases % of people describing their health as 'good' or 'very good' Number and total length of cycle tracks (including trends over time) 	
To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	<ul style="list-style-type: none"> Ensure the timely investment in infrastructure and service provision to accommodate anticipated growth. Address capacity constraints within the local highway network. Encourage sustainable modes of travel. Ensure new development is accessible to community facilities, services, and employment to reduce the need to travel. Ensure a sustainable pattern of development. 	Population Human Health Air Climatic Factors	<ul style="list-style-type: none"> Location of development by settlement and as overall proportion of growth. Number and total length of cycle tracks (including trends over time) Alignment of development with the spatial strategy Progress against the infrastructure delivery schedule. 	<ul style="list-style-type: none"> Accessibility via sustainable modes of transport. Access to essential daily services including supermarkets/convenience stores Access to employment Connectivity to pedestrian and cycling infrastructure inclusive of PROW. Parking provision Highway capacity and safety. Utility capacity and servicing.
To encourage the efficient use of land and conserve and enhance soils.	<ul style="list-style-type: none"> Encourage development on previously developed (brownfield) land. Encourage higher density development at accessible locations. The need to make best use of existing buildings and infrastructure, including securing the reuse of long term empty homes. The need to protect the limited areas of Best and Most Versatile Land within the Borough 	Material Assets Soil	<ul style="list-style-type: none"> Location of new development, size and capacity. Percentage of development on PDL Number of vacant dwellings. 	<ul style="list-style-type: none"> Type of site (PDL, mixed, greenfield) Agricultural land classification. Density of proposal.

Appendix 8: Possible Monitoring Indicators

SA Framework Objective	New Sub-objectives	SEA Topic	Indicative Indicators to use	
			For Policy Monitoring	For Site Allocations
To conserve and enhance water quality and resources.	<ul style="list-style-type: none"> The need to protect and enhance the quality of the Borough's water sources. The need to promote the efficient use of water resources. 	Water	<ul style="list-style-type: none"> Number of planning permissions granted contrary to advice from Environment Agency and LLFA on flooding and water quality grounds. Quality of rivers and streams in Pendle by: levels of organic and nutrient enrichment, levels of chemical pollution, and cumulative impact of abstractions on local watercourse. 	<ul style="list-style-type: none"> Adoption of water efficiency standards. Rainwater collection etc. Proximity of the Site to a main river. Capacity of water supply and waste water processing.
To reduce the risk of flooding to people and property, taking into account the effects of climate change.	<ul style="list-style-type: none"> The need to locate new development away from areas of flood risk, taking into account the effects of climate change. 	Climatic Factors Water	<ul style="list-style-type: none"> Number of properties in flood zones 2 and 3 (including trends over time) Number of planning permissions granted contrary to advice from Environment Agency and LLFA on flooding and water quality grounds. 	<ul style="list-style-type: none"> Adoption of SUDs Development outside of FZ2/FZ3. Dry access. Flood Risk Assessment and Drainage planning application requirements.
To improve air quality.	<ul style="list-style-type: none"> Minimise emissions of pollutants to the air. Ensure no new areas within the Borough are designated an AQMA. Secure improvements in air quality at the Skipton Road AQMA in Colne. Promote use of public transport, walking and cycling through spatial planning and implementation of policy. 	Air Human Health	<ul style="list-style-type: none"> Number of AQMAs in Pendle. CO₂ levels in Pendle 	<ul style="list-style-type: none"> Proximity to AQMA Accessibility via sustainable modes of transport. Access to essential daily services including supermarkets/convenience stores Access to employment Connectivity to pedestrian and cycling infrastructure inclusive of PROW. Number of electric charging points provided. Capacity of bike storage provided.
To minimise greenhouse gas emissions and adapt to the effects of climate change.	<ul style="list-style-type: none"> Ensure that new development is adaptable to the effects of climate change and that it is planned to avoid increased vulnerability. 	Climatic Factors	<ul style="list-style-type: none"> Amount of energy generated by renewable sources for completed developments and those with planning permission. 	<ul style="list-style-type: none"> Accessibility via sustainable modes of transport.

Appendix 8: Possible Monitoring Indicators

SA Framework Objective	New Sub-objectives	SEA Topic	Indicative Indicators to use	
			For Policy Monitoring	For Site Allocations
	<ul style="list-style-type: none"> • Increase woodland and tree cover to mitigate and adapt to climate change. • Mitigation of climate change with increase renewable energy. • Reduce greenhouse gas emissions at new development with implementation of efficiency measures. • Direct development to sustainable locations. • Promote travel by foot, bicycle and/or public transport. • Aid the transition towards electric cars. 		<ul style="list-style-type: none"> • Amount of CO2 emissions in Pendle by source (including trends over time). • CO2 reduction in local authority operations. • Location of development by type of use. 	<ul style="list-style-type: none"> • Access to essential daily services including supermarkets/convenience stores • Access to employment • Connectivity to pedestrian and cycling infrastructure inclusive of PROW. • Adoption of water efficiency standards. Rainwater collection etc. • % of electricity generated from renewable sources. • Number of electric charging points provided. • Capacity of bike storage provided. • Optimum layout and design of buildings to promote energy efficiency.
To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	<ul style="list-style-type: none"> • Minimise waste arising and encourage reuse and recycling. • Ensure that the Borough's mineral resources are protected from inappropriate development and loss. • Promote re-use of materials or recycled materials in new development. 	Material Assets	<ul style="list-style-type: none"> • % of household waste sent for reuse, recycling and composting. • Implementation of policy regarding sustainable use of materials/resources. 	<ul style="list-style-type: none"> • Within Mineral Safeguarding Area • Sufficient bin storage provided. • Sufficient Bin Lorry swept path within layout.
To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.	<ul style="list-style-type: none"> • Secure net gains for biodiversity. • Conserve and enhance sites with international, national and local designations, and at non-designated sites. • Maintain, restore and expand the Borough's priority habitats. • Safeguard and enhance the green infrastructure network, addressing deficiency, gaps, improving access. • Take into account the impact of climate change on biodiversity. 	Biodiversity Fauna and Flora Human Health	<ul style="list-style-type: none"> • Biodiversity Net gains. • Number of new development completed which incorporate beneficial biodiversity features. • Amount of land designated for biodiversity/geodiversity importance and its condition (including changes in area and condition) by type of designation. • Provision of open space by type and location (including trends over time). 	<ul style="list-style-type: none"> • Biodiversity monitoring. • Proximity to designated site or priority habitat and effect. • Use of site by protected species. • Amount of Net Biodiversity land/features provided.

			<ul style="list-style-type: none"> Quality of open space by location using quality scoring and Green Flag standards. 	
To conserve and enhance the historic environment, heritage assets and their setting.	<ul style="list-style-type: none"> Protect and enhance the historic environment, heritage assets and their setting. Avoid unacceptable harm heritage assets and their setting. Recognise the value of non-designated assets and protect these where possible. Recognise the contribution made by the historic environment to the character of landscapes and townscapes. 	Cultural Heritage Landscape	<ul style="list-style-type: none"> Number of listed assets and Conservation Areas Number of development schemes refused planning permission on the grounds of impact to a heritage asset. Number of buildings on the at Risk Register. Applications approved despite objection from Historic England. 	<ul style="list-style-type: none"> Distance to and effects on Listed Buildings, Scheduled Ancient Monuments, non-designated assets, Conservation Areas. Requirements for heritage information through planning application submissions.
To conserve and enhance landscape character and townscapes	<ul style="list-style-type: none"> Conserve and enhance Pendle's distinctive landscape and townscape character. Preserve and appropriately manage development within the Green Belt and Forest of Bowland Area of Outstanding Natural Beauty. Promote high quality design that respects local character. 	Landscape Cultural Heritage	<ul style="list-style-type: none"> Land designated Local Green Space Provision of open space by type and location (including trends over time). Quality of open space by location using quality scoring and Green Flag standards. 	<ul style="list-style-type: none"> Within Green Belt, Forest of Bowland AONB, Open Countryside, Conservation Area? Topography of the Site and natural features. Scale and nature of adjacent development and uses. Compliance with national/local design code(s).

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
Environment Agency	I can confirm, after reviewing the report, that all issues that fall within our remit have been scoped in and given appropriate consideration for inclusion in the proposed Sustainability Appraisal to support the revised Local Plan.	Comments noted.	None.
Historic England	<p>Historic England has produced a document, which you might find helpful in providing guidance on the effective assessment of the historic environment in Strategic Environmental Assessments. This can be found at:</p> <p>https://www.historicengland.org.uk/images-books/publications/sustainability-appraisal-and-strategic-environmental-assessment-advice-note-8/</p> <p>Historic England recommends that a scoping report should:</p> <ul style="list-style-type: none"> Review the objectives of relevant policies, plans and programmes Establish the baseline for the historic environment, including any trends and targets and gaps in the existing information. Identify sustainability issues and opportunities for the historic environment and heritage assets. Develop sustainability objectives. Identify indicators and targets Consider how alternatives will be assessed. Provide sufficient information on the proposed methodology for the appraisal to assessed whether the effects upon the historic environment will be properly addressed. 	Comments and guidance welcomed.	Comments to be taken into account in the further development of the SA.
Historic England	Baseline information; Historic England welcomes the section on Cultural Heritage within the report and	Comment noted.	None.

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
	agrees with the risks outlined in para 3.2.146 and the key sustainability issues.		
Historic England	SEA Themes and Objectives; We welcome the SA topic on Cultural Heritage and the supporting key sustainability issues included in Table 3.15. We support the proposed SA objective 13 which reasons 'To conserve and enhance the historic environment, heritage assets and their setting' and the guide questions listed in table 4.1	Comment noted.	None
Historic England	<p>Methodology; Welcome the detailed outline included in the report on how the appraisals of the proposals and policies of the Local Plan will be done; however have comments on the proposed appraisal in terms of cultural heritage:</p> <ul style="list-style-type: none"> - Appraisal criteria: The key sustainability issues and guide questions talk more broadly about the historic environment and also mentions heritage assets. It is import that for consistency that the appraisal criteria reflects this approach so it would be better to remove the word <i>designated</i> in the appraisal criteria ensuring that non-designated and conservation areas are also covered. - Threshold, similar comments as above, in addition: <ol style="list-style-type: none"> 1) Thresholds inclusion of only scoring the impact on nationally designated heritage asset – does not line up with the approach in the sustainability issues and guide questions. It would be better if <i>designation</i> was removed. Development proposals should also sustain the 	<p>Comments noted and concern acknowledge. Revised approach and language better reflects the diverse historic environments found in Pendle which extend beyond those formally designated ensuring that adequately consideration and conservation of these assets are given during policy development and site selection.</p> <p>Unclear why effects are limited to the issue of access. This is likely to be a drafting error and will be changed to address wider issues in addition.</p>	<p>Reference to 'designated' has been removed in recognition of the protection afforded towards non-designated heritage assets within the NPPF alongside designated sites. Reference made to conserving historic assets within the threshold criteria as well as securing their enhancement. Single positive score expanded to take into account wider benefits to heritage assets beyond improving access.</p>

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
	<p>significance of a heritage asset including their setting as well as enhance so the Major Positive criteria could be amended.</p> <p>2) On the minor positive effect score – could this be expanded as it seems unusual to only score on access?</p>		
Historic England	<p>Comments Re: Appendix 2 definitions of significance:</p> <ul style="list-style-type: none"> - Guide questions bullet 1 and 3 delete reference to significance. - Description (column) – make sure the labels for each score match those in table 4.4 scoring system. - Illustrate guidance: <ol style="list-style-type: none"> 1) Significant positive (++) – this refers to nationally designated conservation areas are locally designated. Also, would this score never apply to a non-designated heritage asset? The wording suggests that it would it. 2) Positive (+) – this score should also be made available to a heritage asset that is on national list just locally designated ones. So should be amended (see previous comments). 3) Negative (-) – It is also unclear what the <i>deterioration</i> of in terms of scoring the impact. This is not used to judge the impact on heritage assets. In addition, it is only suggesting that a negative score can apply to local designations. Which is incorrect. Both negative and positive scores can apply to all types of heritage 	<p>Comments acknowledged and welcomed. It is important that the Sustainability Appraisal testing framework is consistent throughout so that the effects of proposed policies and sites and their reasonable alternatives are subject to the same robust testing which fully reflects the requirements of legislation and national planning policy in the interests of conserving the historic environment.</p> <p>Comments raise concerns and questions which need further thought to ensure that a robust assessment framework is provided.</p>	<p>Guide questions 1 and 3 amended to remove reference to significance. Column labels amended to ensure consistent labelling.</p> <p>Illustrative guidance amended as recommended. Alterations made to remove distinction made between nationally and locally designated sites. Reference made to deterioration within the negative and significant negative criteria removed and revised to reference less than substantial harm and substantial harm as well as the public benefits test to ensure alignment of appraisal with national planning policy. Criteria also amended to reflect the revisions made to thresholds to address Historic England comments.</p>

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
	<p>assets (which is where enhancement/mitigation measures are used).</p> <p>4) Significant Negative (--) – Again reference to deterioration needs to be change and reference to destruction – not sure what this means. Do you mean total loss and substantial harm? It is worth noting that with this score, it would probably mean that the tests of public benefits would be needed if the harm cannot be mitigated.</p>		
Historic England	<p>Historic England strongly advises that you engage conservation, archaeology and urban design colleagues at the local and county level to ensure that you are aware of all the relevant features of the historical environment and that the historic environment is effectively and efficiently considered as part of the Local Plan, the allocation of any site and the preparation of the SEA. They are also best placed to advise on local historic environment issues and priorities, including access to data held in the HER. They will be able to provide you with the Historic Environment Records for the area including any relevant studies and ensure a joined-up and robust approach is undertaken.</p>	Comment noted.	<p>The Council will engage with key stakeholders, consistent with requirements of planning regulations and national planning policy, through the development of the Plan. The Council will take efforts to ensure that the plan provides a sound strategy for the historic environment (including sites allocated for development) based on proportionate, robust and up-to-date evidence.</p>
Natural England	<p>Table 3.15 Key sustainability issues for Pendle: We would advise the following: -Biodiversity and Green Infrastructure – The need to conserve restore and enhance biodiversity including sites with international, national and local designations for their nature conservation value.</p>	Comments noted. Revised wording is acceptable noting the condition of the relevant designation and implication of current wording.	Table 3.15 amended to reflect revised wording proposed by Natural England.

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
	<p>We would advise against use the word conserve here, due to the nationally and internationally designated site's unfavourable condition.</p> <p>-Biodiversity and Green Infrastructure – The need to enhance the green infrastructure network, addressing deficiencies and gaps, improving accessibility and encouraging multiple uses where appropriate.</p> <p>We welcome this inclusion</p> <p>-Land use, geology, and soil – The need to protect the limited areas of best and most versatile agricultural land in the Borough.</p> <p>We welcome this inclusion</p> <p>-Landscape – The need to preserve and appropriately manage development within the Green Belt and the Forest of Bowland Area of Outstanding Natural Beauty (AONB).</p> <p>We welcome this inclusion</p>		
Natural England	<p>Natural England do not support the principle of developing on peat and we advise you to consider its importance to the delivery of the Local Nature Recovery Strategy, and ambitions for Net Zero and the Climate Emergency declared by the Council. Natural England is working develop restoration methods so that it is able to hold water and sequester carbon.</p> <p>We advise further consideration of peat within Sustainability objective 10.</p>	<p>Comments noted. Role and treatment of peat through the Local Plan needs to be reviewed especially noting its climate change benefits and benefits for flooding.</p>	<p>Guide questions of Objective 10 revised to make reference to the Council's Net Zero ambitions.</p> <p>Criteria introduced to link site assessment with this measure of sustainability.</p> <p>Objective 12 revised to reference the need to safeguard and restore peatland within the borough and the role development can place in securing the delivery of Local Nature Recovery Strategy.</p> <p>Appendix 2 also revised as relevant.</p>

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
Lancashire County Council (Heritage)	Historic England Advice Notes 3 and 8, and Environment Good Practice Advice in Planning 2 document are not referenced within the SA Scoping Report.	Comments noted. References will be inserted to section.	References to wider guidance applicable to the SA and plan making process inserted at Paragraph 4.3.7
Lancashire County Council (Heritage)	No mention is made within either of the scoping reports (including SA scoping report) of any intention to consult the HER in compiling evidence for both the proposed new local plan or the call for sites. Without such information it will not be possible for objective 13 to be properly addressed and would result in those decision being based on either out-of-date, incomplete or missing data sets.	Concerns noted.	The Council will consult the HER Register for shortlisted sites and high scoring sites.
Lancashire County Council (Heritage)	Non-designated heritage assets are mentioned on page 8 of the non-technical summary and in 3.2.146 but there is no reference to what they might be (such as those definitions included in Annex 2: Glossary) and despite the need for guide question 13 including 'Will it protect or enhance the significance of non-designated heritage assets?' only designated heritage assets are depicted in figure 3.14.	Concern raised regarding only assessing designated heritage assets through the SA reflects the comments made by Historic England as addressed above.	Table amended to remove distinction between 'designated' and 'non-designated heritage assets'
Lancashire County Council (Heritage)	<p>Appendix 2: Definitions of significance – the guide question for theme 13 includes the question again, but references only designated heritage assets in the indicator box, whilst referring to non-designated assets in the illustrative guidance box.</p> <p>Failure to mention the need to consult the HER for information on non-designated heritage assets may give the impression that they will be dealt with as part of any assessment of the impacts on designated heritage assets. But given the lack of HER consultation over the last 12 years, it is not unreasonable to</p>	<p>Issue of consistency also raised by Historic England.</p> <p>The Council will ensure that adequate and proportionate regard (taking into account the stage plan making represents within the development process and requirements of legislation and national planning policy) to the effects of proposals and policies on the historic environment.</p>	<p>Table amended to remove distinction between 'designated' and 'non-designated heritage assets'</p> <p>The Council will consult the HER Register for shortlisted sites and high scoring sites.</p>

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
	suggest the lack of archaeological assessment may continue.		
John Turley	Surely Climate Change runs through each of these topics. How can we separate these out given the implications?	Table 4.2 of the Sustainability recognises how the objectives of the Sustainability Appraisal are interlinked and against what themes.	No change.
John Turley	Plans and Programmes reference made to IPCC Report 2018, Lancashire Climate Change Strategy 2009, the Paris Agreement 2015, and the Climate Change Act 2008 all of which have been superseded by newer reports or fundamentally re-written.	The Plans and Programmes referred to in this section does in some instances refer to older documentation and acts where these play a significant role in enacting later policy. Efforts are made to ensure that the latest legislation, policies and programmes are referred and considered through the Sustainability Appraisal.	Reference of Glasgow Climate Pact included within Appendix 2 Plans and Programmes.
John Turley	Pendle is woefully short of renewable energy schemes. Would it not be possible for the planning department to carry out at least an initial survey of potential sites within the borough? This could include sites owned by Lancashire CC, schools or even privately owned. This information could be used to set up community renewable energy schemes.	Problem of resources and skill shortage to carry out this task especially given that renewable energy products are becoming diverse with reduce specific site requirements. At the same time this broadens the scope for renewable energy schemes to be accommodated within the borough. In light of this policies are directed to promote and encourage the development of renewable energy schemes, including at allocated development sites. The on-shore windfarm assessment conducted in	None direct, however further consideration will be given as to how the policies of the plan could promote or incentivise community based renewable energy projects.

Appendix 9: SA Scoping Report – Consultation Responses (August 2022)

Responder	Comment/Issue Raised	PBC Response	Action
		partnership with Lancashire County Council in 2009 is still considered to form an appropriate basis for assessing commercial applications for windfarms.	
John Turley	Have specific initiatives been tried to address the waste recycling problem within Pendle?	The specific responses applicable through planning to address this issue are limited. Generally in relation to household waste the response is a design issue to ensure sufficient safe storage of bins within the curtilage of a property, and also ensuring that barriers to collection and processing of waste are as far as possible removed. The issue of waste during construction is addressed through promoting the re-use of materials, efficient use of materials, use of sustainable materials, and the careful disposal of waste.	None direct.
Lidgett and Beyond	The Scoping Report sets out sufficient information to establish the context for the SA for the Local Plan in terms of the review of plans and programmes and baseline evidence and analysis. It seems to cover the main economic, social and environmental issues and the overall approach appears sound. In particular, we are pleased that the selection of brownfield sites for development scores more highly.	Comments noted.	None.
