26	Climate adaptation and mitigation	Review environmental/procurement policies	Short term	Policies reviewed	-	Terri Johnson	30/09/2026	This action is proposed to be aligned with the ongoing Procurement Policy review, which forms part of the wider Procurement Governance, Policy and Compliance workstream and supports delivery of the associated MIAA Procurement Review recommendation. A review of the current Procurement Policy will be undertaken ahead of the first draft, with relevant environmental procurement requirements considered as part of the policy refresh. This will ensure climate adaptation and mitigation considerations are incorporated through an existing governance process, avoiding duplication and maintaining a coordinated approach. The first draft is scheduled for completion by close of business on 6 October, followed by a two

27	Climate adaptation and mitigation	Net zero procurement requirements	Short term	Requirements developed	-	Terri Johnson	30/09/2026	To avoid duplication and fragmentation, it is proposed that this action is aligned to the wider Social Value and Responsible Sourcing workstream within the Procurement Programme. As net zero forms part of the environmental pillar of responsible sourcing, the development of climate related procurement requirements can be incorporated into the planned Social Value Strategy and Policy work, ensuring a single, consistent approach to implementation, governance, monitoring and supplier engagement. Proposed alignment with existing programme activity, timelines are as follows: January to February 2027: Procurement pipeline mapping. March 2027: Review and test thresholds; test tender weightings and identify high risk categories. April to May 2027: Develop standard clauses, templates, weightings and threshold requirements.
